The Crash Analysis and Reporting Unit compiles data for reported motor vehicle traffic crashes occurring on city streets, county roads and state highways. The data supports various local, county and state traffic safety programs, engineering and planning projects, legislative concepts, and law enforcement services.

Legally reportable motor vehicle traffic crashes are those involving death, bodily injury, or damage to personal property in excess of \$500 (for crashes that occurred prior to 9/01/1997) or \$1,000 (for crashes that occurred between 9/01/1997 and 12/31/2003). As of 01/01/2004, drivers are required to file an Accident and Insurance Report Form with DMV within 72 hours when damage to the driver's vehicle is over \$1,500; damage to any vehicle is over \$1,500 and any vehicle is towed from the scene as a result of damage from the accident; if injury or death resulted from the accident; or if damage to any one person's property other than a vehicle involved in the accident is over \$1,500. For more information on filing requirements, please contact Driver and Motor Vehicles Services (DMV).

The Crash Analysis and Reporting Unit is committed to providing the highest quality crash data to customers. However, because submittal of crash report forms is by statute, the responsibility of the individual driver, the Crash Analysis and Reporting Unit cannot guarantee that all qualifying crashes are represented in the Statewide Crash Data System; nor can assurances be made that all details pertaining to a single crash are accurate.

Database expansion and refinement implemented in 2002 may result in slight differences from data reported in earlier years.

HANDOUTS

References provided to new coders as handouts

A Guide to the New Laws on Teen Driving

Automated Milepoint Log (AML, Highway Inventory) Code Descriptions

City, County, or Federal Jurisdiction Report

DMV Drivers Manual Section 2 – Highway Signs, Signals and Markings

INTRODUCTION

This manual is an instructional tool for use in the analysis, coding and decoding of motor vehicle crashes to the Oregon Department of Transportation's Statewide Crash Data System (CDS). The manual is organized according to the layout of data fields on the CDS Data Entry Application. It provides a list of codes, code descriptions, instructions, examples, and validation rules where applicable.

Section I describes Crash Level data. This is data that is common to each individual crash (time, location, collision type, crash classification, weather conditions, investigation, etc.).

Section II describes Vehicle Level data. This is data that is specific to each individual vehicle involved in the crash (vehicle type, direction of travel, action, errors, causes, events, etc.).

Section III describes Participant Level data. This is data that is specific to each individual participant involved in the crash (type of participant, sex, age, injury severity, etc.).

Section IV describes additional system-generated codes. Values in these fields are dependent on values entered into fields from other tables, and are populated automatically by the data entry program. The system-generated codes simplify querying and provide additional information for data reporting.

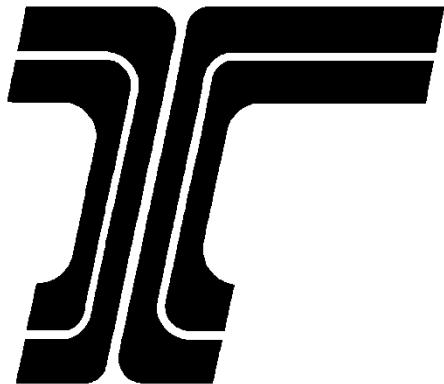

Section V includes appendices, glossary definitions, legal intervention, Functional Classification and NHS Status on Oregon Highways, Highway Number Cross Reference, and Validation Rules.

Note that **codes in bold type** are revised or become effective as of the Code Year this manual covers.

Section I

CRASH LEVEL

DMV CRASH SERIAL NUMBER

Format: 5 char

Code	Description
00001 – 79999	Actual ‘file’ number assigned by DMV
8xxxx	8 leading: indicates original number assigned to incorrect county
9xxxx	9 leading: indicates duplicate serial number for relevant county

INSTRUCTIONS:

Serial Number is assigned to each crash by the Driver and Motor Vehicle Services (DMV) division. The number is stamped on the accident report cover sheet of the case file. Serial Number, together with the **County** code, make up the unique case identifier for each crash. Crashes within each county are numbered consecutively each year.

For example, the DMV file number 03-1234 is made up of two parts: ‘03’ represents the county code (in this case, Clackamas County), and ‘1234’ is the Serial Number. Our data entry field is 5 characters long, so we add a leading zero and enter the number as ‘01234’ in the data entry screen.

DMV does not include the “county code” with the serial number on **Multnomah County** reports. Refer to the accident report cover sheet to find the name of the county in which the crash occurred.

Crashes Assigned to the Wrong County

Occasionally, DMV assigns the crash to the wrong county. In these situations, the incorrect serial number is retained, but the crash data technician enters an **8** as the first character in the 5-digit field. For example, a crash assigned to County ‘03’ (Clackamas County) in error and given number 01234 would be coded to its correct county, and the serial number would be entered as **81234**. When this occurs within counties using larger serial numbers, 11234 would become 81234. This practice allows the crash to be coded to the correct county, while flagging it as being originally assigned to an incorrect county in DMV’s files. A “green” feedback form is sent back to DMV indicating the error in the county assignment, and a record of the change is entered into the CAR unit’s report tracking database. When DMV corrects the county assignment in their records, they send a new serial number back to us, and we update the crash database.

Crashes Assigned Duplicate Serial Numbers

When DMV assigns a duplicate serial number, i.e. the same number for two different crashes in one county, the crash data technician should adjust the serial number for the second crash by replacing the first character of the serial number with a **9**. For example, if serial number 01234 were assigned to two different crashes in County ‘03’ (Clackamas County), the first crash would retain the 01234 code, and the second crash would be coded **91234**. The 9 should be assigned to the later crash date whenever possible. In the case of a larger serial number, 11234 would become 91234.

If an individual crash must be broken out into more than two different crashes, the crash data technician should consult the code leader for recommendations on the use of an additional leading number.

VALIDATIONS:

Rule #	Rule Message	Severity
2001	A crash already exists with this serial number, county and year value	Red/Severe

CRASH DATE

Format: 2 char, 2 char, 4 char

Code	Description	Code	Description	Code	Description
<i>Month (MM)</i>	<i>The month in which the crash occurred</i>				
01	January	05	May	09	September
02	February	06	June	10	October
03	March	07	July	11	November
04	April	08	August	12	December
<i>Day (DD)</i>	<i>The day on which the crash occurred</i>				
01-31	Actual Day				
<i>Year (YYYY)</i>	<i>The year in which the crash occurred</i>				
XXXX	Code Year				

INSTRUCTIONS:

Crash Date is an eight-digit field that describes the date on which the crash occurred, as recorded on the police accident report (PAR) or on the driver report. The format of the crash date field is MMDDYYYY, where MM equals the two-digit month, DD equals the two-digit day, and YYYY equals the four-digit century and year.

The year is automatically inserted by the electronic data entry system, but may be modified by the crash data technician.

When the exact day of the crash is unknown and there is a missing persons report mentioned in the report, code the date the person went missing. If no missing persons report is mentioned, use the date of the police report.

VALIDATIONS:

Rule #	Rule Message	Severity
7	Combination of month, day and year do not represent a valid date	Red/Severe
8	Year value must be at least 1985	Red/Severe
9	Future date value invalid	Red/Severe
varies	[code field value] was not found in [lookup table name] or is not valid as of the crash date	Red/Severe

CRASH HOUR

Format: 2 char

Code	Description	Code	Description
00	12:00 a.m. (midnight) - 12:59 a.m.	13	1:00 p.m. to 1:59 p.m.
01	1:00 a.m. to 1:59 a.m.	14	2:00 p.m. to 2:59 p.m.
02	2:00 a.m. to 2:59 a.m.	15	3:00 p.m. to 3:59 p.m.
03	3:00 a.m. to 3:59 a.m.	16	4:00 p.m. to 4:59 p.m.
04	4:00 a.m. to 4:59 a.m.	17	5:00 p.m. to 5:59 p.m.
05	5:00 a.m. to 5:59 a.m.	18	6:00 p.m. to 6:59 p.m.
06	6:00 a.m. to 6:59 a.m.	19	7:00 p.m. to 7:59 p.m.
07	7:00 a.m. to 7:59 a.m.	20	8:00 p.m. to 8:59 p.m.
08	8:00 a.m. to 8:59 a.m.	21	9:00 p.m. to 9:59 p.m.
09	9:00 a.m. to 9:59 a.m.	22	10:00 p.m. to 10:59 p.m.
10	10:00 a.m. to 10:59 a.m.	23	11:00 p.m. to 11:59 p.m.
11	11:00 a.m. to 11:59 a.m.	24	DO NOT USE
12	12:00 p.m. (noon) to 12:59 p.m.	99	Unknown Time

INSTRUCTIONS:

Crash Hour is a two-digit code representing the hour in which the crash occurred, based on military time. No rounding of time is used.

If a crash occurs at 11:01 a.m. and another at 11:57 a.m., they are both coded as Crash Hour = 11. Crashes that occur at 2400 hours are coded to the following day. **Code 00** should be used for Crash Hour in those situations.

To convert from 'normal' time to military time add '12' to the hour for crashes that occur between 1:00 pm and 11:59 pm.

VALIDATIONS:

Rule #	Rule Message	Severity
82	Combination of Crash Hour, Light Condition and Crash Month not found on the cross-reference table	Red/Severe
83	Warning - please review combination of Crash Hour, Light Condition and Crash Month	Yellow/Warning

COUNTY

Format: 2 char

Code	Description	Code	Description	Code	Description
01	Baker	13	Harney	25	Morrow
02	Benton	14	Hood River	26	Multnomah
03	Clackamas	15	Jackson	27	Polk

183	St. Paul	205	Sumpter	227	Wasco	250	Portland Bridges
184	Salem	206	Sutherlin	228	Waterloo		

INSTRUCTIONS:

City is a three-digit code assigned to each incorporated city. An incorporated city is one that has been approved by an election, held in accordance with Statute (ORS Chapter 221). One code is assigned to each city, regardless of county boundary lines, except for the City of Portland.

The City field is coded when the crash occurs inside the city limits of an incorporated city. Not all named locales are incorporated cities. They are considered unincorporated communities so no city codes are assigned to them. Code them as "outside city limits". Examples of unincorporated communities are Aloha, Clackamas, and Cedar Hills, which fall within the Portland Urban Boundary.

Leave this field blank for crashes that occur outside city limits.

City of Portland

The CAR Unit uses nine different city codes to designate the geographic areas of Portland. This practice helps to identify crash locations when trying to distinguish between similarly named intersections such as:

"SW 6th and Morrison" and "SE 6th and Morrison".

CITY

(continued)

The geographical boundaries in Portland are:

- The Willamette River, which separates East Portland from West Portland
- N Williams Avenue, which separates N from NE
- E Burnside Street, which separates NE from SE
- W Burnside Street, which separates NW from SW

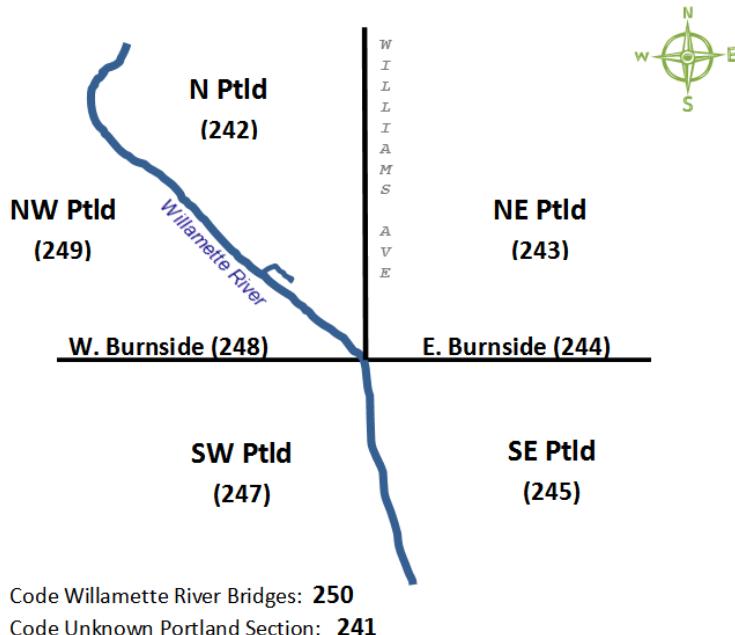

A crash that occurs on, or is attributed to, **Williams Avenue** is coded to "Portland N" (**code 242**).

Use **code 244** for crashes on **East Burnside**, and **code 248** for crashes on **West Burnside**.

Use **code 250** only for crashes that occur on a bridge that crosses over the **Willamette River** in Portland.

If a crash occurs on a roadway that is located in multiple geographic areas of Portland and not enough information is provided in the report to distinguish which area, use **code 241** Portland (unknown).

31	Grants Pass UA	51	Newport UA	85	Woodburn UA
32	Green UA	53	Ontario UA		
33	Hermiston UA	57	Portland UA		

INSTRUCTIONS:

Urban Area is a two-digit code that indicates whether the crash occurred within a Federal Aid Urban Transportation Boundary (FAUTB). When determining this boundary, the city limits, current census information, and major transportation facilities are taken into consideration.

Not all cities lie within urban boundaries; and some cities lie partially inside and partially outside an urban boundary.

Urban boundaries can cross county lines.

Multiple cities can lie within the same urban boundary. For example, Tigard, Beaverton, Portland, Gresham, Lake Oswego, and Wood Village are just a few cities that lie within the Portland Urban boundary.

Refer to the Crash Locator Tool (CLT), the automated milepoint logs (AML's), or the "City – Urban Area" Cross-Reference Table below for assistance in coding this field. If a city is not listed on the "City – Urban Area" Cross-Reference Table, then it is a **"rural city"**, outside an urban boundary.

Leave this field blank for crashes that occur outside urban boundaries.

URBAN AREA

(continued)

CITY – URBAN AREA CROSS-REFERENCE TABLE

CITY		UA		CITY		UA	
CODE	CITY NAME	CODE	UA NAME	CODE	CITY NAME	CODE	UA NAME

URBAN AREA

(continued)

The following urban areas were recognized in CDS coding as of the 2005 code year. They were entered into the state highway inventory mid-2004:

- Brookings
- Green
- Hood River
- LaPine
- Madras
- Molalla
- Sandy

The follow urban areas were discontinued as of the 2005 code year:

- Ashland, which now falls inside the Medford FAUB.
- Wilsonville, which now falls inside the Portland FAUB.

VALIDATIONS:

Rule #	Rule Message	Severity
13	Combination of County, City Section and Urban Area not found on the cross-reference table	Red/Severe
17	Urban area value entered doesn't match urban area value for this highway / milepoint for this year in IT IS	Yellow/Warning
95	Urban Area value indicates urban area but Functional Class value indicates rural area	Red/Severe
96	Urban Area value indicates rural area but Functional Class value indicates urban area	Red/Severe

FUNCTIONAL CLASSIFICATION

Format: 2 char

Code	Description	Code	Description
State			Nonstate
01	Rural Interstate	11	Urban Interstate
02	Other Rural Principal Arterial	12	Other Urban Freeways and Expressways
06	Rural Minor Arterial	02	Other Rural Principal Arterial
07	Rural Major Collector	14	Other Urban Principal Arterial
08	Rural Minor Collector	06	Rural Minor Arterial
09	Rural Local	16	Urban Minor Arterial
11	Urban Interstate	07	Rural Major Collector
12	Other Urban Freeways and Expressways	17	Urban Collector
14	Other Urban Principal Arterial	08	Rural Minor Collector
16	Urban Minor Arterial	09	Rural Local
17	Urban Collector	19	Urban Local
19	Urban Local		

INSTRUCTIONS:

Functional Classification groups streets and roadways by similar characteristics of mobility and/or land access. Functional classifications are categorized based on federal standards. This classification technique recognizes that individual roads and streets are dependent upon each other.

Roads that occur inside a Federal Urban Area Transportation Boundary (FAUB) are considered "urban". All others are considered rural, even in areas with populations greater than 5,000.

It is extremely important to determine the actual crash location, and assign the crash to a particular road, before coding this and all other roadway elements.

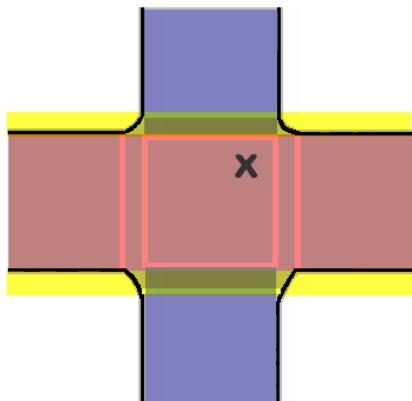

Coding Functional Classification for "Intersectional Crashes"

For crashes that occur **in the center** of an intersection (quadrants 1 – 4), **always** code the highest functional classification that exists at the intersection, even if the vehicles are not traveling on the road that carries the highest functional class.

For "intersectional crashes" that occur **outside the center** of the intersection (zones 5 and 6), **and for all non-intersectional crashes**, assign the crash to the roadway on which the first harmful event (impact) occurred, and code Functional Class accordingly.

FUNCTIONAL CLASSIFICATION

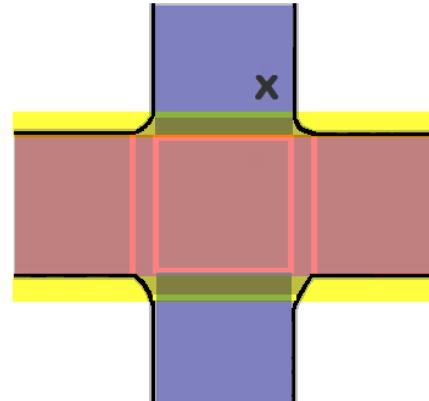

(continued)

**Intersectional Crash inside
Center of Intersection**

Code NHS as '1'
Code FC as '02'

NHS = yellow bar
Rural Principal Arterial (FC 02) = red
Rural Minor Arterial (FC 06) = blue

**Intersectional Crash outside
Center of Intersection**

Code NHS as '0'
Code FC as '06'

NHS = yellow bar
Rural Principal Arterial (FC 02) = red
Rural Minor Arterial (FC 06) = blue

For crashes that occur inside the intersection of two state highways with equal classification, assign the crash to the highway that carries the highest priority (usually the highway with the lowest state highway index number). Refer to the "**Highway Intersectional Priority List**" under the instructions for the **Highway Number** field, to see which highways take priority at intersectional crashes.

CLASSIFICATIONS:

Federal functional classifications define how roadways are intended to operate or function in moving traffic through the state

Arterials provide mobility, typically carrying high traffic volumes on a continuous network with no stub routes but provide very little direct land access. A stub route occurs when a roadway classification stops midway through the road. Arterials must connect from roadway to roadway.

Collectors provide both mobility and land access gathering trips from localized areas and feed them onto the arterial network.

Locals provide land access. Local roads are lower traffic volume roadways that provide direct land access but are not designed to serve through traffic needs.

Urban Classifications:

Urban principal arterials (including interstates and other types of freeways) focus on mobility by serving trips through urban areas and long distance trips between traffic generators within an urban area.

FUNCTIONAL CLASSIFICATION

(continued)

Urban minor arterials focus on mobility but serve shorter trips between traffic generators within urban areas.

Urban collectors focus on mobility and land access by serving both intra-urban and local trips that take travelers to arterials.

Local Streets focus on land access rather than through trips and include all other public roads.

Rural Classifications:

Rural principal arterials (including rural interstates) focus on statewide and interstate mobility, and typically include the Interstate System and other rural freeways that serve longer distance high-volume corridors.

Rural minor arterials also focus on mobility but typically link smaller cities and towns and other statewide traffic generators, such as resorts that are not served by principal arterials.

Rural major collectors link county seats and communities not served by arterials but have an intra-county rather than statewide focus.

Rural minor collectors collect traffic from local roads and smaller communities.

Local roads focus on land access and relatively short trips and include all other public roads.

VALIDATIONS:

Rule #	Rule Message	Severity
19	Functional Class not in lookup table or not valid as of crash date.	Red/Severe
20	Functional Class value entered doesn't match functional class value for this highway / milepoint for this year in ITIS	Red/Severe
95	Urban Area value indicates urban area but Functional Class value indicates rural area	Red/Severe
96	Urban Area value indicates rural area but Functional Class value indicates urban area	Red/Severe

NHS

Format: 1 char

Code	Description
0	No
1	Yes

INSTRUCTIONS:

NHS indicates whether the highway on which the crash occurred is a part of the National Highway System. Prior to the federal surface transportation reauthorization “MAP-21”, only certain state highways and intermodal connectors were included in the National Highway System. MAP-21 expanded the NHS to include many high-volume local roads. The CAR Unit began collecting the NHS value for those roads in the 2013 crash file.

NHS is depicted as a yellow border along the road linework in the CLT.

Code 0 is used for crashes that occur on portions of roadway that have **not** been designated as part of the National Highway System.

Code 1 is used for crashes that occur on portions of roadway that **have** been designated as part of the National Highway System.

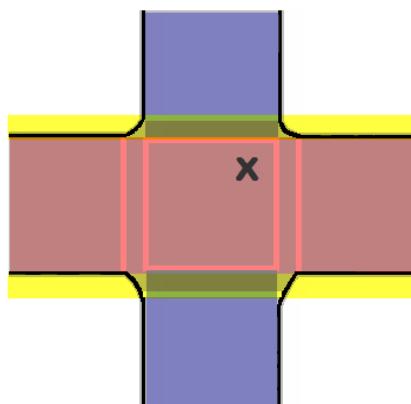

Coding NHS for Intersectional Crashes

For crashes that occur **in the center** of the intersection (**quadrants 1 – 4**), code NHS according to the **highest functional classification** that exists **at the intersection**, even if the vehicles are not traveling on the road that carries NHS.

For intersectional crashes that occur **outside the center** of the intersection (**zones 5 and 6**), code NHS based on the roadway on which the first harmful event (impact) occurred.

NHS

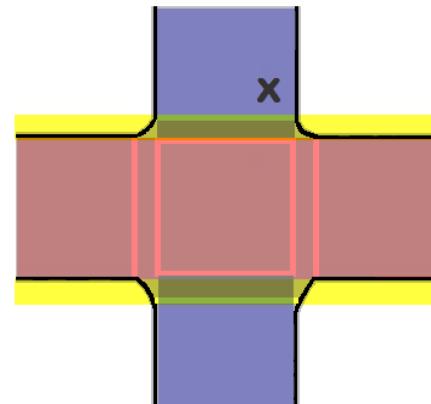

(continued)

**Intersectional Crash inside
Center of Intersection**

Code NHS as '1'
Code FC as '02'

NHS = **yellow bar**
Rural Principal Arterial (FC 02) = **red**
Rural Minor Arterial (FC 06) = **blue**

**Intersectional Crash outside
Center of Intersection**

Code NHS as '0'
Code FC as '06'

NHS = **yellow bar**
Rural Principal Arterial (FC 02) = **red**
Rural Minor Arterial (FC 06) = **blue**

VALIDATIONS:

Rule #	Rule Message	Severity
22	NHS value entered doesn't match NHS value for this highway/milepoint for this year in ITIS	Yellow / Warning

351	Joseph-Wallowa Lake	450	Succor Creek		
360	Madras-Prineville	451	Vale-West		

INSTRUCTIONS:

Highway Number represents the administrative number assigned to a state highway by ODOT. A **state highway** is:

“...a land-based public way designated by the Oregon Transportation Commission as a highway for the purpose of vehicular travel. The State of Oregon commonly has, but may not have, all right, title, interest, jurisdiction, maintenance and control of the entire area within the highway right-of-way.”

Usually, the Highway Number is the same as the state highway index (inventory) number, except for these three highways:

Highway Number	State Highway Index Number	Highway Name	Route Number
1E	081	Pacific Highway East	US 99E
1W	091	Pacific Highway West	US 99W
2W	092	Lower Columbia River Highway	US 30

The “highway number” is not the same as the signed “route number” posted along the highway. The route number is a political designation for routes traveled from one place to another. Although highway numbers and route numbers are not related to each other, they may be assigned to portions of the same roadway.

Code this field only for crashes that occur on the state highway system. Leave this field blank for all other crashes.

HIGHWAY NUMBER

(continued)

Highway System Intersectional Crash Coding Priority

Use the following order of preference for crashes that are located at the intersection of two or more highways, **when the collision occurs as vehicles are entering or exiting the intersection**:

- 1) **At the intersection of two or more highways**, code the highway with the smallest index number along with its corresponding milepoint. (The exceptions to this rule are listed below on the "Highway Intersectional Priority List").
- 2) **At the intersection of a mainline highway and a connection or frontage road**, code the mainline highway if it is being exited or entered (used).
- 3) **At the intersection of two connections**, code the connection that continues through the intersection.
- 4) **At the intersection of a frontage road and a connection**, code the connection if it is being entered or exited (used).
- 5) **At the intersection of a city street and a highway**, code the highway if it is being entered or exited (used).
- 6) **At the intersection of a connection and a city street**, code the connection if it is being entered or exited (used).
- 7) **At the intersection of a frontage road and a city street**, code the frontage road if it is being entered or exited (used).
- 8) **At the intersection of a county road and any of the above highway component types**, follow the same rule.

HIGHWAY INTERSECTIONAL PRIORITY LIST

(Exceptions to the rule for ranking highways by number – revised 05/21/2007)

Local Area	Less Important Hwy	Code More Important Hwy
Albany	16	58
Necanicum Junction	46	47
Parkrose	59	123
Pendleton	36	67
Philomath	27	33
SW Portland	3	26
Prineville	14	41
Progress	141	144
Progress	143	144
Sisters	15	16
Sylvan	29	47
Tillamook Junction	37	47
Vale	5	7
Valley Junction	32	39
Wallace Bridge	30	39
Warm Springs Junction	44	53

HIGHWAY NUMBER

(continued)

VALIDATIONS:

Rule #	Rule Message	Severity
43	When Impact Location Code > 04 and Highway No. is null and City ID is not null and Number of Turn Legs is null or 0, then Direction from Intersection must be < 9.	Red / Severe
63	When Highway Number is entered, Impact Location Code must be a numeric value <=14	Red / Severe
64	When Highway Number is not entered but City Identifier is entered, Impact Location code must be a numeric value <=9	Red / Severe
130	Milepoint value not valid for the specified Highway in the specified Crash YearYellow / Warning	Red / Severe
136	Either a Highway, Street or Recreational Road must be specified	Red / Severe
173	Intersecting Street must not be Unknown ('00000') if crash occurs on a highway outside city limits	Red / Severe
1026	Milepoint must be null when Highway Number is null and crash occurred inside city limits.	Red / Severe

ROADWAY NUMBER

Format: 1 char

Code	Description
Blank	Not on state highway system
1	Undivided highway, or add-mileage alignment of divided hwy (<i>exception: I-5 “non-add” mileage</i>)
2	Non-add mileage alignment of a divided highway or couplet (<i>exception: I-5 “add” mileage</i>)
5	Mileage on alignment not yet built or mileage on a non-state owned roadway and considered "located".

INSTRUCTIONS:

Roadway Number is a one-digit code used in conjunction with the Highway Number to make highway milepoints unique, and to specify the side of a divided highway on which the milepoint exists.

Code this field for crashes that occur on the state highway system only, including connections and frontage roads. Leave this field blank for all other crashes.

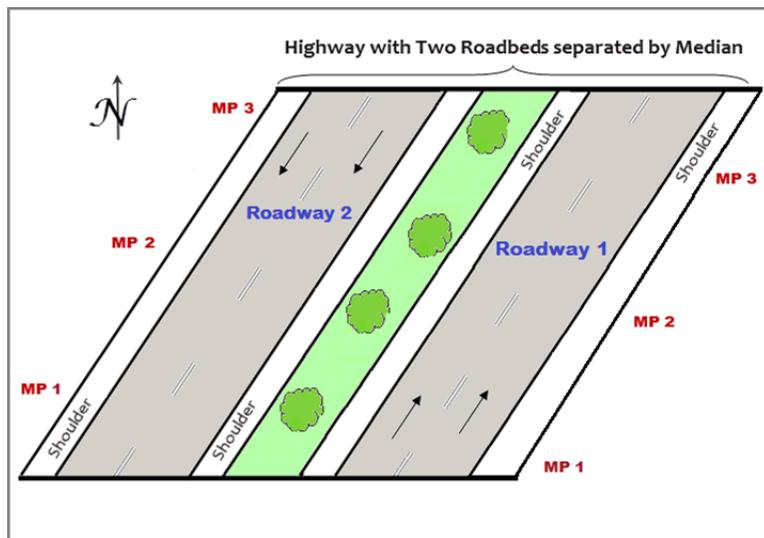

Code 1 is used when a crash occurs on an undivided highway, or on the “**add**” (increasing) mileage side of a divided highway or couplet .

Exception: Interstate 5, Highway 001 “**non-add**” mileage side is designated as Roadway 1, and the “**add**” mileage side is designated as Roadway 2.

Code 2 is used when a crash occurs on:

- the “non-add” (decreasing) mileage side of a divided highway, or
- on the “non-add” (decreasing) mileage side of a couplet, or
- on the non-add side of a frontage road. (*effective 2007*)

Example of Roadway Number when milepoints increase to the North

ROADWAY NUMBER

(continued)

Code 5 is used when a crash occurs on land areas that have a surveyed alignment where a road is intended to be built. No paved surface exists yet. This mileage is considered "located", and is neither "add" nor "non-add".

DEFINITIONS:

Add-Mileage generally applies when milepoints have increasing values in the direction of travel. The term originated from the fact that the direction of increasing milepoints is used for mileage summarization, whereas separate roadways mileposted in the opposite direction are not counted in totals.

Non-Add Mileage applies to milepoints that decrease in the direction of travel. Non-add mileage is not included in highway mileage summarization.

Alignment means the horizontal and vertical design of a section of roadway.

Couplet refers to the two *one-way* roadways of a divided highway, named differently, approximately parallel, with traffic flow in opposite directions, and separated by accessible land uses. On the reverse ("non-add") mileage side, vehicular travel runs in the opposite direction from the side where the highway milepoints increase. The milepoints on this section of the highway still increase in the same direction as the rest of the highway, but the vehicle travels in the opposing direction.

Oregon Route 99E, Highway 72 in Salem, (Liberty Street NE and Commercial Street NE) is an example of a **couplet**. Liberty Street is the reverse side of the couplet, because Highway 72 milepoints increase southbound, though vehicular travel on Liberty Street is northbound.

VALIDATIONS:

Rule #	Rule Message	Severity
26	Roadway Number must be null when the Highway Number is null	Red / Severe
102	Roadway Number is required when Highway Number is entered	Red / Severe

HIGHWAY COMPONENT

Format: 1 char

Code	Description
Blank	Not on state highway system
0	Mainline state highway
1	Couplet; code for both "add" and "non-add" sides of the highway
3	Frontage road
6	Connection

INSTRUCTIONS:

Highway Component is a one-digit code that describes the type of service the coded section of highway provides.

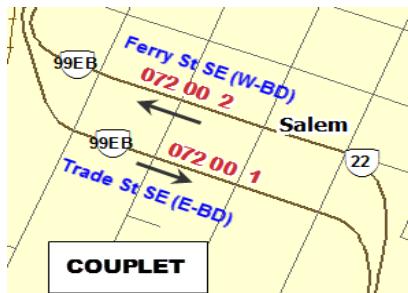

Code this field only for crashes that occur on the state highway system. Leave this field blank for all other crashes.

Code 0 is used when the crash occurs on the **mainline** portion of a highway. The mainline portion of the highway refers to all roadways for a highway, excluding connections, frontage roads, and couplets. (This is a slight variation to the way mainline is defined by ODOT terms and definitions, for the purposes of coding for the CAR Unit).

Code 1 is used when the crash occurs on **either side of a couplet**. A couplet is composed of the two roadways of a divided highway, often named differently, approximately parallel with traffic flow in opposite directions, and separated by accessible land uses.

Examples of couplets include:

- Marion Street bridge and Center Street Bridge on Hwy 030 in Salem
- Ferry Street SE and Trade Street SE on Hwy 072 in Salem
- Vista Ridge Tunnels of Sunset Hwy 047 in the Portland area. (The Sunset Hwy couplet carries only one name.)

Code 3 is used when the crash occurs on a **frontage road**. A frontage road is a road, secondary to and generally parallel to the mainline highway, providing service to abutting property and adjacent areas for control of access. A frontage road may or may not be connected to the highway it services.

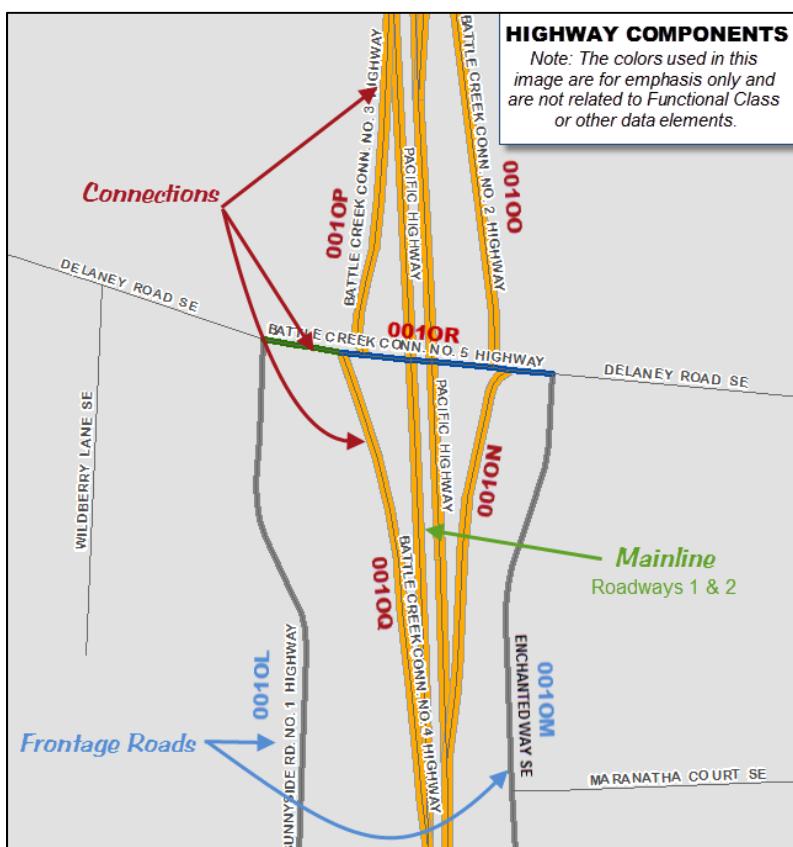

HIGHWAY COMPONENT

(continued)

Enchanted Way S.E. just south of Salem on the east side of I-5 (Hwy 1) is an example of a **frontage road**. Sunnyside Road on the opposite side of I-5 is also a frontage road. Both these roads belong to I-5.

Code 6 is used when the crash occurs on a **connection**. A connection is a street or road, open to vehicular travel, (often an off or on ramp) which joins a road from the state highway system to any other road, entity, or to another state-owned road. A connection is usually much shorter than a spur or frontage road.

Code 8 is a placeholder and has not yet been approved for use.

VALIDATIONS:

Rule #	Rule Message	Severity
28	Highway Component Code must be null when the Highway Number is null	Red / Severe
33	Highway Component must be 6 if a Road Connection value is specified	Red / Severe
103	Highway Component is required when Highway Number is entered	Red / Severe
138	When Highway Component = 6, the Connection Number must be entered, numeric, and must be > 0.	Red / Severe
146	Highway Couplet begins or ends at this milepoint. Please confirm whether crash occurred on or off the couplet, and confirm Highway Component field value.	Red / Severe

MILEAGE TYPE

Format: 1 char

Code	Description
Blank	Not on State Highway System
0	Regular Mileage (this is a numeric code)
Z	Overlapping

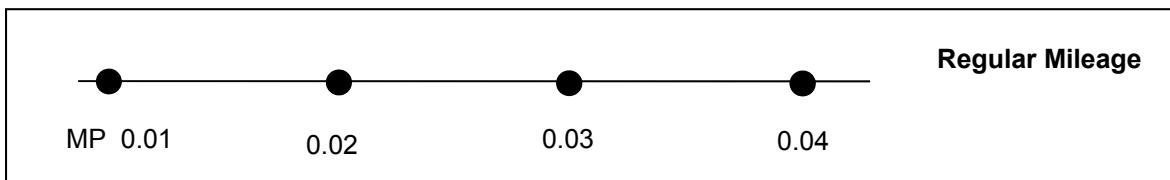

INSTRUCTIONS:

Mileage Type is used to make milepoints unique in areas where there are multiple occurrences of the same milepoint on a single highway.

Leave this field blank for crashes that do not occur on the state highway system.

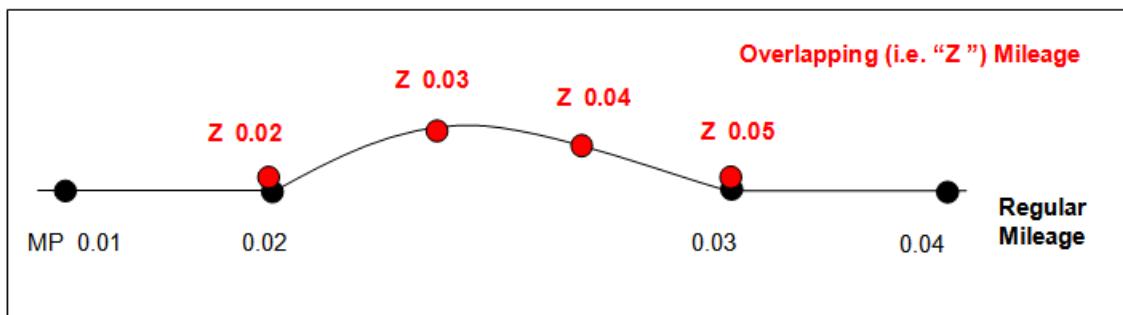

Code 0 is used for **Regular Mileage** – Regular mileage represents any mileage that does not fall within any of the categories listed below. The majority of the highway system is regular mileage.

Example 1: Original highway alignment (**regular mileage**)

Code Z is used for **Overlapping Mileage**. Overlapping (i.e. "Z") Mileage is comprised of duplicate milepoints used on a new length of roadway constructed within a segment of road that already has existing milepoints. This occurs when a highway is lengthened anywhere between its beginning and ending milepoints.

Example 2: Regular mileage, with overlapping "Z" mileage inserted

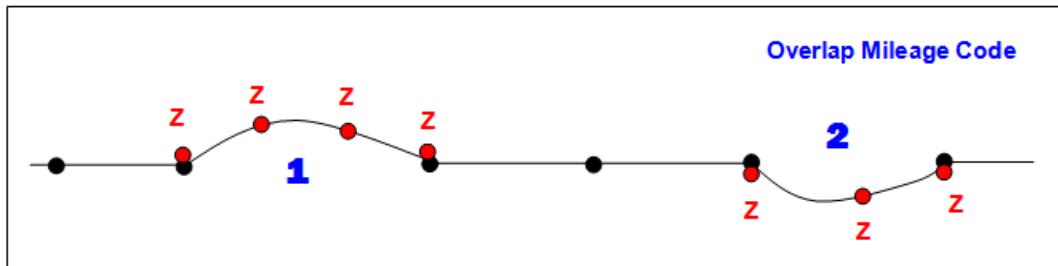

The TransInfo database assigns an "**Overlapping Mileage Code**" to every section of Z mileage that occurs on a highway. The Overlapping Mileage Code is a sequential number assigned, chronologically as reconstruction changes the original highway alignment. This field is not captured in the Crash Data System, except where the code exists as the 9th character of the LRS: i.e. **0001001Z2S00**.

MILEAGE TYPE

(continued)

In the TransInfo Highway Inventory and the AML, the first instance of Z mileage is assigned Overlapping Mileage Code '1'.

Example 3: Overlapping Mileage Codes

VALIDATIONS:

Rule #	Rule Message	Severity
30	Mileage Type Code must be null when the Highway Number is null	Red / Severe
31	Mileage Type value entered doesn't match Mileage Type value for this highway / milepoint for this year in IT IS	Yellow / Warning
104	Mileage Type Code is required when Highway Number is entered	Red / Severe

CONNECTION NUMBER

Format: 1 char

Code	Description
Blank	Not a ramp or connection on state highway system
1-9	Actual ramp or connection number

INSTRUCTIONS:

Connection Number is a one-digit code that identifies an on-ramp, off-ramp, over-crossing or under-crossing roadway within an interchange. Connection numbers are assigned to each connection that belongs to a given highway within the interchange. Connection numbering re-starts at '1' for each additional highway; therefore, the same connection "numbers" may be assigned to a connection that belongs to a different highway in the same interchange.

Refer to the streets database, system setups, or diagrams to find the connection number for those that are set up inside city limits. For areas outside city limits, refer to the automated milepoint logs (AMLs) or CAR Unit diagrams.

Examples from Automated Milepoint Log (AML):

Read AML from Bottom to Top						PACIFIC HIGHWAY NO. 001
R	PP	D	U	ROADWAY	DESCRIPTION	
W	XX	MILE	U	CODES		
Y	12	POINT	P			
2		5.39	S U U S	17348 SIGN BR. TRUSS		
2		5.38	+	END STRUCTURE		
2		5.37	+ = S	001AB CONN. M.P. 1C5.37		

SISKIYOU HWY. CONN. NO. 1 001AB 1 5.61 S = = S HWY. 273 M.P. 6.62 1 5.37 20 CONN. NO 01 1 5.37 10 S = = S HWY. 001 M.P. (2)5.37 1 5.37 SISKIYOU HWY. CONN. NO. 1	TRDSEG.RDWY_ID: Hwy Number plus 2-character alphabetic suffix. Together, they identify a specific connection.
--	---

DEFINITION:

Connection: A street or road, open to vehicular travel (often an on- and/or off-ramp), which joins a road from the state highway system to any other road, entity, or another state owned road. A connection is usually much shorter than a spur or frontage road.

VALIDATIONS:

Rule #	Rule Message	Severity
33	Highway Component must be 6 if a Road Connection value is specified	Red/Severe
138	When Highway Component = 6, the Connection Number must be entered, numeric, and > 0	Red/Severe

LRS

Format: 12 VarChar

SAMPLE:

Zero	Hwy No.	Conn. ID (incl. FR)	Rdwy No.	Mileage Type Code	Overlap Code	Jurisdiction (S = State)	HPMS No. (always zeros)	SAMPLE LRS
0	091	00	1	0	0	S	00	009100100S00
0	091	AB	1	0	0	S	00	0091AB100S00
0	091	00	1	Z	3	S	00	0091001Z3S00

INSTRUCTIONS:

Linear Reference System (LRS) is a system for identifying the location of highway features by a relative measure (i.e. the milepoint). In GIS applications, the LRS is used in conjunction with the milepoint to dynamically place crash points on a map, in lieu of using spatial coordinates.

At this time, we only collect LRS values for state highways.

Leave this field blank for crashes on non-state roads.

The LRS is created by stringing together the values of seven different Trans-Info data elements, starting with a prefix of '0'. The LRS must be entered according to the chart below. There are 12 positions in the state highway LRS, and each one must be filled in.

LRS POSITION	TRANS-INFO FIELD NAME	FIELD DESCRIPTION	SAMPLE 1 Mainline	SAMPLE 2 Connection	SAMPLE 3 Z Mileage
1	Zero	Always enter a zero in the 1 st position of the LRS	0	0	0
2 - 4	Highway Number	Enter the 3-digit highway number	091	091	091
5 – 6	Connection ID	Enter the 2-character alphabetic suffix used by the RICS unit to identify a connection or frontage road. Enter zeros for mainline highway.	00	AB	00
7	Roadway Number	Enter the roadway number (1 or 2)	1	1	1
8	Mileage Type Code	Enter the mileage type code (PFX 1 in the AMLs)	0	0	Z
9	Overlap Code	Enter the "overlap code" for Z mileage (PFX 2 in the AMLs, 1 - 9)	0	0	3
10	Jurisdiction	Enter S for State	S	S	S
11 – 12	HPMS No.	No longer used. Enter zeros	00	00	00

This field became effective as of the 2009 code year. Updates were loaded retroactively for 2007 & 2008 crashes.

VALIDATIONS:

Rule #	Rule Message	Severity
1023	Length of LRS value is incorrect. Must be 12 characters	Red / Severe

LATITUDE

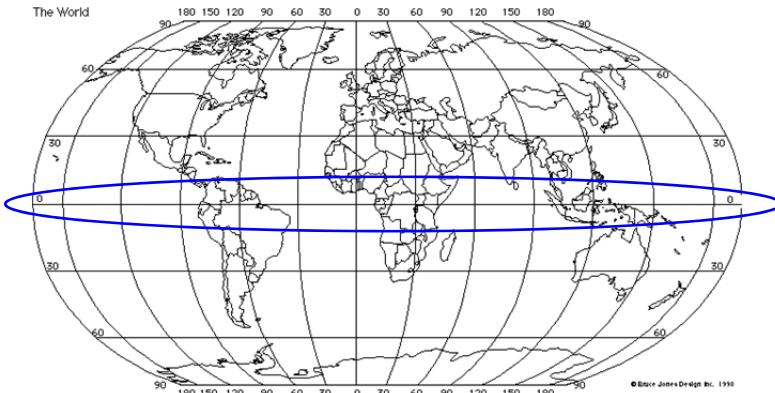

Format: integer, integer, decimal

Code	Description
42 to 46	Latitude Degrees
0 to 59	Latitude Minutes
0.00 to 59.99	Latitude Seconds

INSTRUCTIONS:

Latitude and Longitude make up the spatial coordinates that specify the crash's geographical location on Earth. "Latitude" is the angular distance of a point on the earth, north or south of the equator. In CDS, latitude is entered as degrees, minutes, and seconds.

This data element is usually harvested from the Crash Locator Tool (CLT), but it can be entered into the Crash Data System manually.

The maximum value for "seconds" is 59.99. If the CLT imports a value of 60.00 in the "seconds" field, follow these steps to correct it:

- 1) Increase the "minutes" value by 1
- 2) Change the "seconds" value to "0.00"

For example, if the CLT imports this Latitude: 45 33 60.00, change it to: 45 34 0.00

Available for 2007 and later years.

VALIDATIONS:

Rule #	Rule Message	Severity
105	When entered, Latitude Degrees must be a whole number between 41 and 47, inclusive	Red/Severe
106	When entered, Latitude Minutes must be a whole number between 0 and 59, inclusive	Red/Severe
107	When entered, Latitude Seconds must be a numeric value between 0.00 and 59.99, inclusive	Red/Severe
125	Latitude Minutes must be null when Latitude Degrees is null	Red/Severe
126	Latitude Seconds must be null when Latitude Degrees is null	Red/Severe
164	Latitude Minutes must be entered when Latitude Degrees is entered	Red/Severe
165	Latitude Seconds must be entered when Latitude Degrees is entered	Red/Severe

LONGITUDE

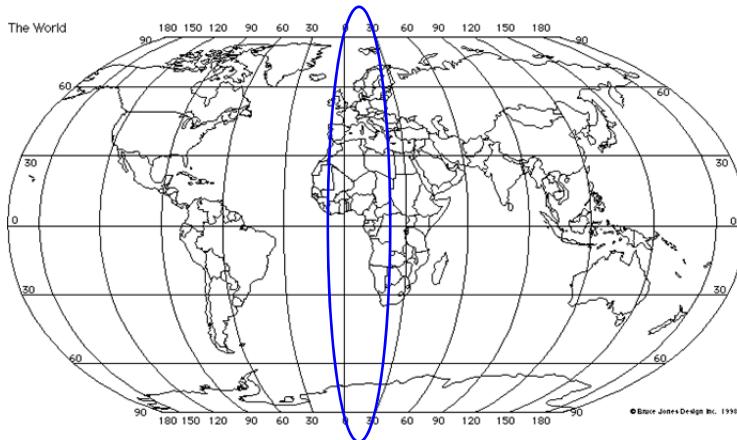

Format: integer, integer, decimal

Code	Description
-116 to -124	Longitude Degrees
0 to 59	Longitude Minutes
0.00 to 59.99	Longitude Seconds

INSTRUCTIONS:

“Longitude” is the angular distance of a point’s meridian (an imaginary line between the earth’s poles that crosses the equator at right angles), east or west of the prime meridian at Greenwich, England. In CDS, longitude is entered as degrees, minutes, and seconds.

This data element is usually harvested from the CLT, but it can be entered into the Crash Data System manually.

The maximum value for “seconds” is 59.99. If the CLT imports a value of 60.00 in the “seconds” field, follow these steps to correct the Longitude:

- 1) Increase the “minutes” value by 1
- 2) Change the “seconds” value to “0.00”

For example, if the CLT imports this Longitude: -122 53 60.00, change it to: -122 54 0.00

Available for 2007 and later years.

VALIDATIONS:

Rule #	Rule Message	Severity
108	When entered, Longitude Degrees must be a whole number between 124 and 117, inclusive or between -124 and -117, inclusive	Red/Severe
109	When entered, Longitude Minutes must be a whole number between 0 and 59, inclusive	Red/Severe
110	When entered, Longitude Seconds must be a numeric value between 0.00 and 59.99, inclusive	Red/Severe
127	Longitude Minutes must be null when Longitude Degrees is null	Red/Severe
128	Longitude Seconds must be null when Longitude Degrees is null	Red/Severe
166	Longitude Minutes must be entered when Longitude Degrees is entered	Red/Severe
167	Longitude Seconds must be entered when Longitude Degrees is entered	Red/Severe

SPECIAL JURISDICTION
 (For crashes that occur on Recreational or Other Roads)

Format: 2 char

Code	Description	Code	Description
Blank	No Special Jurisdiction (default)	59	Crater Lake National Park
40	Deschutes National Forest	60	Any BLM Road
41	Fremont National Forest	70	Any State Park Road
42	Malheur National Forest	71	Any State Forest Service Road
43	Mt. Hood National Forest	80	Burns Reservation
44	Ochoco National Forest	81	Fort McDermitt Reservation
45	Rogue River National Forest	82	Grand Ronde Reservation
46	Siskiyou National Forest	83	Siletz Reservation
47	Siuslaw National Forest	84	Umatilla Reservation
48	Umatilla National Forest	85	Warm Springs Reservation
49	Umpqua National Forest	97	Other Federal Jurisdiction
50	Wallowa-Whitman National Forest	98	Other Non-Federal Jurisdiction
51	Willamette National Forest	99	Unknown Jurisdiction
52	Winema National Forest		

INSTRUCTIONS:

Special Jurisdiction is used for crashes that occur on roads that are open to the public, but under the authority of an agency other than an incorporated city, county, or ODOT. Examples of special jurisdictions are:

- National Forest Service
- National Park Service
- Bureau of Land Management (BLM)
- State Forest Service
- State Park Service
- Reservations – (Native American Tribal Lands)
- Miscellaneous non-county roads

Enter the Special Jurisdiction code that corresponds to the area in which the crash occurred. When a value is entered in Special Jurisdiction, the data entry system enables the following fields:

- Jurisdiction Group (this code is automatically supplied by data entry system)
- Recreational / Other Road Number (modified Street Number field)
- Intersecting Recreational / Other Road Number (modified Nearest Intersecting Street Number field)

Special Jurisdiction is not used to code crashes that occur on State Highways, County Roads, or City Streets that run through a Special Jurisdiction. This field is only for roads that belong to the Special Jurisdiction.

SPECIAL JURISDICTION

(continued)

Instructions for coding Recreational / Other Road Number:

Recreational roads are coded using the same method as Non-Milepointed county roads (see Street Number, "County Road" instructions). Some recreational / other roads have no official or available road number, and can be difficult to locate on a map. Use the CLT to collect a coordinate value for this location, or to set the unlocatable flag.

Code the location as accurately as the information available in the crash report and references allow. Use the following two-character prefix in front of the road number in the "Recreational Road Number" and "Nearest Intersecting Recreational Road Number" fields , if the crash occurred in one of the following jurisdictions.. Do **not** add leading zeros or spaces.

- NF (National Forest); i.e. NF70
- BL (BLM); i.e. BL3-14-06
- NP (National Park); i.e. NP2401
- SF (State Forest); i.e. SF317
- SP (State Park); i.e. SP2401
- CR (miscellaneous non-county road)

If a milepoint is referred to on the report, enter it into the Milepoint field..

When a number is not available for a road, but a road name has been given, spell out the name as completely as possible within the 15 alphanumeric spaces allowed in the data entry program. Otherwise, use an abbreviated form of the road name. Consult with the code leader to determine what abbreviation should be used.

If the location can not be found on a map, enter the road name described in the report, and code Functional Classification as a local road. Reference the crash from the closest road described in the crash reports.

Note: Prior to the 2003 code year, recreational / other road crashes were entered into a separate database, called the Recreational Crash Program, which has been archived by the CAR Unit.

VALIDATIONS:

JURISDICTION GROUP
(For crashes that occur on Recreational or Other Roads)

Format: 2 char

Code	Description
1	National Forest
2	State Forest
3	National Park
4	State Park
5	Bureau of Land Management
6	Reservation - (Native American Tribal Lands)
7	Other Federal Jurisdiction
8	Other Type Jurisdiction (non-federal land)
9	Unknown Jurisdiction

INSTRUCTIONS:

Jurisdiction Group identifies the category of “Special Jurisdiction” coded in the previous field. The code and description are automatically supplied by the CDS based on the value that was entered into the Special Jurisdiction field.

This field is only populated for crashes that occur on special jurisdiction roadways. For all other crashes, leave this field blank.

VALIDATIONS:

STREET NUMBER (First Street Field)

“Recreational Road Name” for Crashes in Special Jurisdictions

Format: 5-15 char

Code	Description
Blank	Crash occurred on a State highway outside city limits
xxxxxx	Varies depending on the jurisdiction of the road being coded

INSTRUCTIONS:

The Street Number field length and coding instructions vary based on local government, road jurisdiction, and whether or not the crash location is “**intersectional**” (see Character of Road, pg. 55). Street Number codes are found in the Set-up Books, the CDS Streets database, and County Road log books. Enter leading zeros for numbers taken from the County Road Log books, to make the code at least 5 characters in length.

Street Number is coded for all crashes, except those that occur on state highways outside city limits.

Never code the Street Number field with 00000.

For **non-intersectional** crashes, the value coded in the Street Number field represents the road on which the crash occurred.

For **intersectional** crashes **inside city limits** or on **non-milepointed county roads**, enter the **smallest** street number of the two roads being coded. This practice simplifies coding and avoids complex hierarchical rules.

Refer to one of the following sections for instructions on how to code Street Number for a given jurisdiction.

- City Streets
 - Portland Bridges
 - Complicated Diagrams & Zones (Portland only; crashes coded prior to 2012)
 - Cul-de-sacs
- State Highways
 - Inside city limits
 - Outside city limits
- County Roads
 - Non-milepointed
 - Milepointed
 - Lane County
- Recreational / Other Roads

STREET NUMBER (First Street Field)

(continued)

CITY STREETS and STATE HIGHWAYS inside City Limits

Street Number codes for roads inside cities are 5 characters in length, and include leading zeros when necessary.

Crashes in this jurisdiction require entries in both the "first" Street Number field and the "second" Street Number field (Nearest Intersecting Street Number).

For **intersectional** crashes inside city streets, enter the **smaller** of the two street numbers into the 1st Street Number field.

Street Number codes for city streets are available from the Non-System Set-up Books. Street Number codes for state highways inside city streets are available from the System Set-up Book. Use the codes provided all fields represented in the Set-ups.

Portland Bridges that cross the Willamette River:

Code Willamette River bridges in the City of Portland according to the "Willamette River Bridge" supplement. There are 10 bridges included in this supplement.

- Enter '250' (Portland Bridges) into the City field.
- Look up the street number code for the **bridge** and enter it into the "Street Number" field.
- Follow the "Willamette River Bridge" supplement instructions for how to code the Nearest Intersecting Street Number for this bridge.

Portland Complicated Diagrams & Zones (for crashes coded prior to 2012):

This practice was terminated as of the 2012 code year. Instructions are retained here for reference in decoding historic data.

Diagrams were provided to us by the City of Portland for coding certain complicated intersections inside their city. These locations were assigned a "Diagram" number and partitioned into separate "Zones". The "Diagram" number (which was the larger of the two numbers) was entered into the "Street Number" field. The "Zone" number was entered into the Nearest Intersecting Street Number field.

Street Number Codes for Multiple Cul-de-sacs with the Same Name:

Some jurisdictions, such as the City of Eugene, allow multiple cul-de-sacs to be built intersecting the main road, and named the same. These areas require a diagram that MUST be used when coding and decoding these areas. Crash data technicians will consult with the Code Leader for instructions on creating a diagram of the area to be set up.

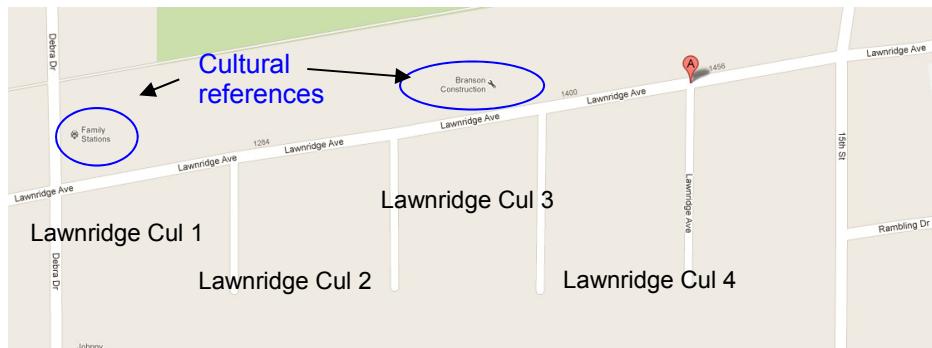

The crash data technicians will select a cross street at the southern or westernmost part of the area as a fixed reference point. Each cul-de-sac will be labeled Cul 1, Cul 2, Cul 3, etc. based on the number of cul-de-sacs present, with 1 being the first cul-de-sac to the North or East of the reference point. It is important to add a cultural reference to the diagram that will not change, to assist in the identification of new cul-de-sacs added after the initial set up of this area.

STREET NUMBER (First Street Field)

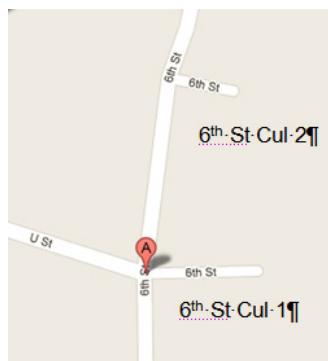

(continued)

If additional cul-de-sacs are added between existing cul-de-sacs at a later time, label them with a decimal (i.e. 1.5 will fall between cul-de-sac 1 and 2, etc.). If a new cul-de-sac is added to the South or West of the original reference point, label them with negatives. Cul -1, Cul -2, Cul -3 etc.

Example1: Lawnridge Ave in Springfield, Oregon.

Example 2: 6th Street in Springfield

STATE HIGHWAYS

For crashes on state highways **inside** city limits, follow the instructions for City Streets.

Leave the Street Number field blank for crashes that occur on state highways that are **outside** city limits.

COUNTY ROADS

When both the **City** and **Highway Number** fields remain blank, the Crash Data Entry System recognizes that a County Road or Special Jurisdiction Road will be entered into the **Street Number** field. The data entry system automatically lengthens the **Street Number** field to **seven characters**. This enables us to code the full Public Road Inventory (PRI) number, which may be six characters long; and allows us to code an “**alphabetic tie-breaker**” in the 7th position, when two county roads

STREET NUMBER (First Street Field)

(continued)

are assigned the same PRI number by the County.

For our purposes, the term “**county road**” refers to a **non-state road that is outside city limits**, which may or may not be outside an urban boundary. “County road” does not pertain to maintenance jurisdiction.

County road coding for the Street Number field depends on whether or not we code milepoints for a given County.

“Non-milepointed” County Roads

We do not code milepoints for county roads in the following three counties:

- Deschutes
- Multnomah
- Washington

Code the Street Number field for non-milepointed county roads the same way as you do for city streets. Look up the road number in the Streets database or in the Non-System Set-up Book, and enter the number **exactly as shown**. If no number is available, submit a new intersection “set-up” involving the desired road.

For **intersectional** crashes on non-milepointed county roads, enter the **smaller** of the two street numbers into the 1st Street Number field.

“Milepointed” County Roads

For non-intersectional crashes on milepointed county roads, look up the road number in the Streets database, and enter the number **exactly as shown**. If no number is available, submit a request for a new intersection “set-up” involving the road, and propose an alphabetic abbreviation for the street number that is 6 characters or less.

For intersectional crashes on milepointed county roads, enter the lowest number of the two roads being used.

Lane County Roads

Lane county roads are coded uniquely, using all the fields listed below:

- Street Number
- Nearest Intersecting Street Number
- Distance from Intersection, coded using hundredths of a mile measurement
- Direction from Intersection, coded using cardinal direction codes 1, 3, 5 and 7
- Milepoint

For intersectional crashes on Lane county roads, enter the lowest of the two street numbers in the 1st Street Number field, and its corresponding milepoint in the Milepoint field.

STREET NUMBER (First Street Field)

(continued)

RECREATIONAL / OTHER ROADS

The Street Number field changes to “Recreational Road Number” when a value is entered in the “Special Jurisdiction” field; and the field length is expanded to 15 characters.

Refer to the “Special Jurisdiction” field for instructions on how to code Recreational Road Number and Nearest Intersecting Recreational Road Number.

VALIDATIONS:

Rule #	Rule Message	Severity
36	First street number must be less than the intersecting street number	Red / Severe
136	Either a Highway, Street or Recreational Road must be specified	Red / Severe
149	First Street must not be blank or 00000 for crashes that occur within city limits	Red / Severe
151	First Street must not be blank or 00000 for non-system crashes that occur outside city limits	Red / Severe
154	When entered, Street Number must be five digits (if City is not null)	Red / Severe
163	Combination of Street Number and Intersecting Street Number not found in cross reference table	Red / Severe
168	When entered, Street Number must be between five and seven digits inclusive for crashes occurring outside city limits	Red / Severe

NEAREST INTERSECTING STREET NUMBER (Second Street Field)

“Intersecting Recreational Road Name” for crashes in Special Jurisdictions

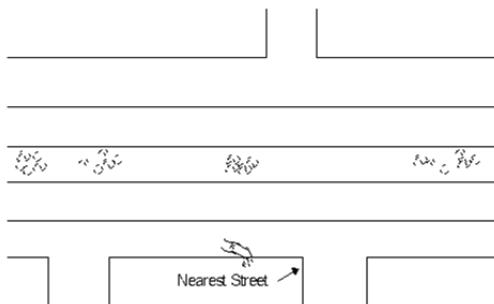

Format: 5-15 char

Code	Description
Blank	Crash occurred on a State Highway outside city limits, or on a milepointed County Road
00000	Street not found
xxxxxx	Up to 7 characters, depending on the jurisdiction of the road being coded. Can be up to 15 characters for Special Jurisdiction roads.

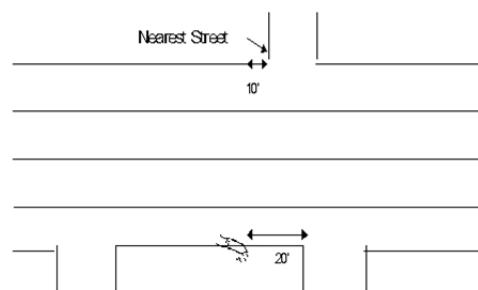

INSTRUCTIONS:

The "Nearest Intersecting Street" is the road closest to the road entered into the "Street Number" field, belonging to the same jurisdiction, and preferably on the same side of the road. This is always true when coding physically divided state highways such as Interstate 5. For roads that are not physically divided, it is permissible to enter the nearest intersecting street from the other side of the road. See the illustrations below for examples.

Example 1 (Divided Hwy)

Example 2 (Undivided Hwy)

When no intersecting road exists within the same jurisdiction, it is permissible to code the nearest cross-street from a neighboring jurisdiction. Enter REF in the “Diag” field of the Intersection Set-up.

For **Intersectional** crashes, enter the **larger** of the two street codes in the 2nd Street Number field for crashes that occur on city streets, state highways **inside** city limits, non-milepointed county roads, and milepointed Lane County roads.

Leave this field blank when coding crashes that occurred:

- on state highways *outside* of city limits
- on **milepointed** county roads (other than Lane County).

CITY STREETS (2nd Street Number)

Crashes that occur inside city limits require a code in both the 1st Street Number and the 2nd Street Number fields.

NEAREST INTERSECTING STREET NUMBER (Second Street Field)

(continued)

For intersectional crashes within city limits (including intersections of a city street and a state highway), code the **larger** of the two street codes in the 2nd Street Number field.

Enter '00000' in this field when there is insufficient information available from the crash report for you to identify the nearest intersecting street. (Only use this code when absolutely necessary, because it limits the value of the data.)

STATE HIGHWAYS (2nd Street Number)

When an **intersectional** crash occurs **inside city limits** and is coded to state highway jurisdiction, the rule for coding the **larger** street number in the 2nd Street Number field still applies. If the state highway's street number is the larger number, enter it in the 2nd Street Number field.

Outside city limits, when a **non-milepointed county road** is coded in the 1st Street Number field, and the 2nd Street Number coded is a **state highway**, frontage road, or connection, enter the following alphabetic characters in the first two positions of this field. Enter the State Highway Index Number in the next 3 positions of the field.

- OH - to represent a mainline highway, as in OH026
- OF – to represent a frontage road, as in OF026
- OC – to represent a ramp or connection, as in OC026

Leave the 2nd Street Number field blank for crashes that occur on state highways outside city limits.

NON-MILEPOINTED COUNTY ROADS (2nd Street Number)

For Deschutes, Multnomah, and Washington County county roads, follow the same instructions as for City Streets.

Enter '00000' in this field when there is insufficient information available from the crash report for you to identify the nearest intersecting street. (Only use this code when absolutely necessary, because it limits the value of the data.)

MILEPOINTED COUNTY ROADS (2nd Street Number)

For milepointed county roads, we only code the 1st Street Number field. Therefore, leave this field blank. (Lane County has its own rules, below.)

If no county road number is available from the Log Books, the crash is coded as if it occurred on a non-milepointed county road. See team lead for further instructions.

NEAREST INTERSECTING STREET NUMBER (Second Street Field)

(continued)

LANE COUNTY

Although the 2nd Street Number field is not coded for "milepointed" county roads, Lane County is an exception.

For intersectional crashes on county roads, enter the **larger** of the two street codes in the 2nd Street Number field.

For non-intersectional crashes, enter the number for the nearest intersecting road. If the nearest road is a state highway, follow the rules in the State Highway section above.

Enter '00000' in this field when there is insufficient information available from the crash report for you to identify the nearest intersecting street. (Only use this code when absolutely necessary, because it limits the value of the data.)

VALIDATIONS:

Rule #	Rule Message	Severity
36	First street number must be less than the intersecting street number	Red / Severe
163	Combination of Street Number and Intersecting Street Number not found in cross reference table	Red / Severe
169	When entered, Intersecting Street Number must be between five and seven digits inclusive for crashes occurring outside city limits	Red / Severe
173	Intersecting Street must not be Unknown ('00000') if crash occurs on a highway outside city limits	Red / Severe
2003	Intersecting Street must not be blank if the crash occurred inside city limits	Red / Severe

INTERSECTION SEQUENCE NUMBER

Format: 1 numeric

Code	Description
0	Non-intersectional crash
1 - 99	Sequential number assigned to the junction of two roads.

INSTRUCTIONS:

The Intersection Sequence Number identifies which junction of the same two roads has been coded. The number increases for roads that intersect more than once, such as “loops”, “circles” and roads that intersect each other at two points more than 50 feet apart.

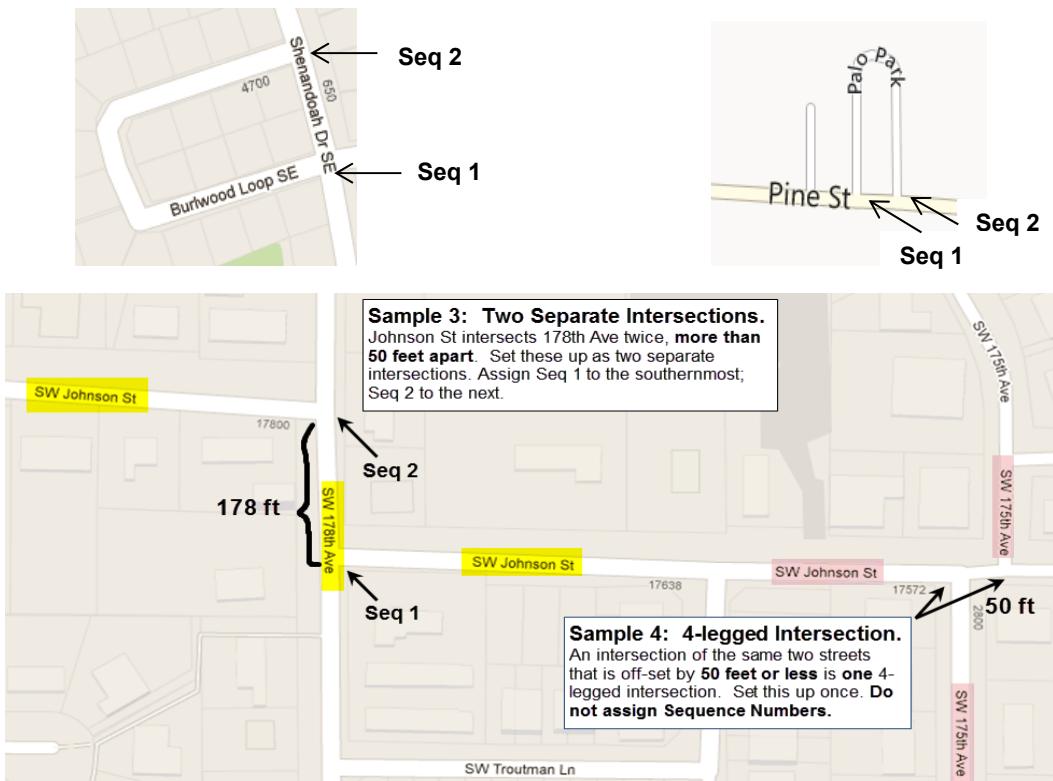

The default value for Intersection Sequence Number is ‘1’.

Intersection sequence numbers are generally assigned in the order of occurrence of the intersecting roads, from **south** to **north** (for north/south roads), or **west** to **east** (for east/west roads).

For city streets and “non-milepointed” county roads

Use ‘1’ to indicate the **southernmost** junction of the through-street that runs north to south, or the **westernmost** junction of the through-street that runs east to west.

Use ‘2’ to represent the **next** southernmost or westernmost intersection, etc.

INTERSECTION SEQUENCE NUMBER

(continued)

For “milepointed” county roads and State Highways

Use ‘1’ to represent the **first occurrence** of the intersection according to the **lowest milepoint**. Increase the sequence number for each subsequent milepoint at which the two roads intersect.

Examples:

Street database view of intersection setups for map of **SE Powell Blvd & Powell S Frontage Rd** intersections seen in sample, with Intersecting Sequence Numbers circled:

View / Maintain Intersections																				
Intersections for Street:																				
Only	City	Type	Street #	SPfx	Street Name	Seq	C	Ln	Mdn	Tm	Dir	Hwy	Rd	Mile	Milepoint	Comp	Con	FC	Eff. Date	Term. Date

VALIDATIONS:

Rule #	Rule Message	Severity
174	Intersection Sequence Number is required when two streets are specified	Red/Severe
175	Intersection Sequence Number is not allowed when only one street is specified	Red/Severe
176	Intersection Sequence Number is not valid for these two streets	Red/Severe

DISTANCE FROM NEAREST INTERSECTION

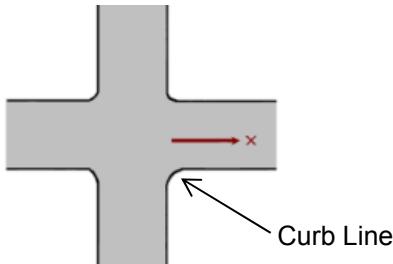

Format: 4 numeric

Code	Description
Blank	Crash occurred on State Highway System or milepointed county road (<i>except for Lane County</i>). Crash occurred on city street or non-milepointed county road where distance from nearest intersection is unknown.
0000	Intersectional crashes within city limits, on non-milepointed county roads, and on Lane County milepointed county roads.
0001 – 9998	Measurement in feet for city streets and hundredths of a mile for non-milepointed county roads, special jurisdiction roads, and Lane County roads.
9999	Distance exceeds 9999 ft., for city street crashes.

INSTRUCTIONS:

This field represents the distance a crash occurred from the nearest intersecting roadway. It is only coded for crashes that occur on city streets, non-milepointed county roads, Lane County roads, and special jurisdiction roads. Coding instructions vary depending on the jurisdiction. For city streets, the code represents a measurement in feet. For non-milepointed county roads, Lane County roads, and special jurisdiction roads, the code represents a measurement in hundredths of a mile.

Using the Crash Locator Tool (CLT) aerial imagery, begin the measurement at the curb line of the nearest intersecting road, and end the measurement at the crash location. (The presence and orientation of a crosswalk has no bearing on where the measurement begins.)

Enter the resulting value into the Data Entry screen. Four digits are required in this field, so enter leading zeros when necessary.

Enter '0000' for intersectional crashes inside city limits, non-milepointed county roads, and Lane County roads.

City Streets

For non-intersectional crashes on city streets, code this field using a foot-measurement up to 9,998 feet (omit the comma). If the distance exceeds 9,998 feet and no other reference is available, enter 9999.

If the distance from an intersecting roadway cannot be determined **or approximated**, leave this field blank. Leaving the Distance from Nearest Intersection field blank for city streets creates an unknown location of impact.

DISTANCE FROM NEAREST INTERSECTION

(continued)

Non-milepointed Roads and Lane County Roads

For crashes on non-milepointed roads, and on Lane County roads, code this field using **hundredths of a mile**. This is necessary because county roads often run for longer distances before another

intersects, and can exceed the 9,998 foot measurement we use for city streets.

For example, if a crash is 1,320 feet from the nearest intersecting roadway, its distance is .25 miles. Code the Distance from Nearest Intersection field as 0025. One mile from a specific roadway is coded 0100. An eighth of a mile is coded 0012. (Refer to the conversion table below.)

Decimal points are assumed and never coded. Enter leading zeros.

If the distance from an intersecting roadway cannot be determined **or approximated**, leave this field blank.

Conversion Table for Distance from Nearest Intersection, Non-milepointed County Roads

Miles (Hun-dredths)	Feet								
1 Mile	5280	1/5 .20	1056	.40	2112	.60	3168	.80	4224

VALIDATIONS:

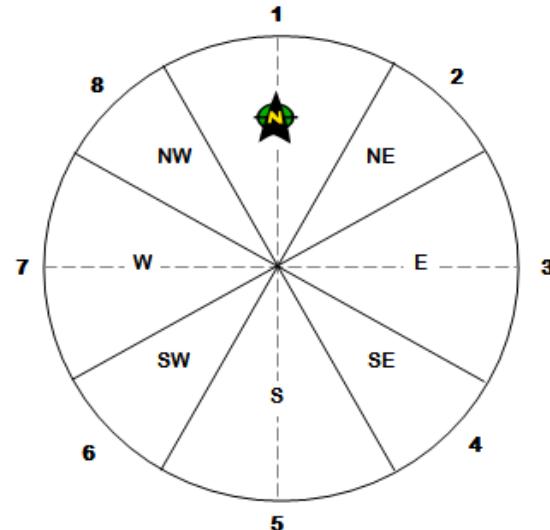

Rule #	Rule Message	Severity
38	Distance from Intersection must be > 0 when Road Character is not "1" (Intersection) and Milepoint is not provided	Red/Severe
39	Distance from Intersection must = 0 when Road Character = "1"	Red/Severe
144	Distance From Nearest Intersection must be blank if crash occurred on State Highway System	Red/Severe

DIRECTION FROM INTERSECTION

Format: 1 numeric

Code Description

- 0 Non-intersectional crash occurred on state highway system outside city limits; crash occurred on a milepointed county road at a non-intersectional location (except for Lane County roads); or in all other cases if direction from second street is unknown.
- 1 North of nearest intersection
- 2 Northeast of nearest intersection
- 3 East of nearest intersection
- 4 Southeast of nearest intersection
- 5 South of nearest intersection
- 6 Southwest of nearest intersection
- 7 West of nearest intersection
- 8 Northwest of nearest intersection
- 9 Center of the Intersection

INSTRUCTIONS:

The Direction from Intersection code represents the compass direction from the crash to the nearest intersection.

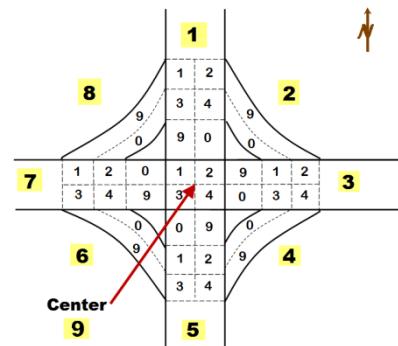

Use code 0 for the following situations:

- for non-intersectional crashes on milepointed county roads (except for Lane County)
- for non-intersectional crashes on state highways outside city limits
- for all other cases when the direction from the nearest intersecting street is unknown.

Use code 9 for crashes that occur at the center of an intersection ("Location of Impact" quadrants 1, 2, 3 or 4). This rule applies to all road types.

For intersectional crashes that occur in "Location of Impact" quadrants 5 or 6, enter the Direction code relative to the center of the intersection.

This diagram shows an intersection with turning legs. The highlighted numbers are the **Direction** codes. The small numbers represent **Location of Impact** codes, with 0 and 9 shown on the turning legs.

DIRECTION FROM INTERSECTION

(continued)

City Streets and Highways inside City Limits

All directions are valid, but Crash Data Technicians should use the directions assigned for the specific intersection in the Set-ups or Streets database.

Use Code 0 when the direction from the 2nd Street is unknown.

Non-Milepointed County Roads

For Multnomah and Washington Counties, all direction codes are valid, though intersections should be set up with cardinal directions whenever possible.

For Deschutes county roads, use cardinal directions (1, 3, 5 or 7) only.

Milepointed County Roads

Use cardinal directions only (1, 3, 5 or 7), for intersectional crashes.

Use Code 0 for non-intersectional crashes.

Lane County county roads are an exception. Code this field using cardinal directions for all crashes.

State Highways outside City Limits

Use Code 0 for non-intersectional crashes on state highways outside city limits.

Use cardinal directions (1, 3, 5 or 7) for **intersectional** crashes on state highways outside city limits, based on the predominate direction of the state highway. In areas where the highway makes an abrupt or significant change in direction, you may need to deviate from the rule of using the highway's predominate direction.

VALIDATIONS:

Rule #	Rule Message	Severity
42	When Road Character = 1 and Number of Turn Legs = 0 and Location of Impact = 01, 02, 03 or 04, then Direction from Intersection must = 9.	Red/Severe
43	When Impact Location Code > 04 and Highway No. is null and City ID is not null and Number of Turn Legs is null or 0 then Direction from Intersection must be < 9.	Red/Severe
180	When City is null and Road Character is not Intersectional and Milepoint is known, then Direction from Nearest Intersection should = 0	Yellow/Warning

MILEPOINT

Format: 7 numeric

Code	Description
Blank	Crash occurred on City Street or non-milepointed County or Other road.
00000 – 99998	Actual milepoint to the nearest 0.01 mile. Can be a negative number. Decimal point is assumed.
99999	Unknown

INSTRUCTIONS:

Milepoint is a five-digit code used to identify the crash location on a state highway or milepointed county road. The field length will accommodate a negative symbol and a decimal point.

A “milepost” is not the same as a “milepoint”, though people sometimes use the two terms interchangeably. “Mileposts” are physical posts placed alongside a highway to mark the distance in miles from the beginning of the highway. **Milepoints** are the measurements from post to post.

The milepoint of a crash is determined by adding or subtracting from a pre-determined milepoint that marks a fixed reference point on the highway.

The accuracy of the milepoint is very important. Crash data technicians must determine the crash location for a milepointed roadway based on information from the drivers’ and police reports.

Milepoints are not common knowledge, and more often than not, the technician will have to use approved highway or public road references to determine the correct milepoint for each crash.

Code this field to **the nearest one-hundredth of a mile**. The data entry system will right-justify the number entered and will automatically insert a decimal point. For example, values entered as **245, 2.45, 00245, or 002.45** will display in the data entry screen as **2.45**.

At times, information from crash reports is vague or conflicting. If you are unable to make a reasonable determination of a milepoint, enter code 99999 in this field.

Leave the Milepoint field blank for crashes on:

- non-milepointed county roads (described below),
- city streets,
- special jurisdiction roads for which a milepoint is not available.

STATE HIGHWAY MILEPOINTS

Although State Highway Milepoints are loaded from the Crash Locator Tool, verify intersectional milepoints inside city limits against the System Set-ups. Outside city limits, verify state highway intersectional crash milepoints using the Automated Milepoint Logs (AML).

The majority of highway milepoints represent "normal" miles. However, the following situations require special handling.

MILEPOINT

(continued)

Negative (X) milepoints

Negative milepoints, also known as 'X' milepoints, are created when a highway is extended beyond the beginning milepoint (i.e. MP 0.00), in the opposite direction from the "add" mileage. Negative milepoints are preceded by a negative sign.

Enter a negative symbol as the first character of the Milepoint field, then enter the milepoint number. The data entry system automatically inserts a decimal to represent milepoint hundredths. For example, an entry of **-245** or **-00245** will display as **-2.45**.

At one point, negative milepoints existed on connections, however that is no longer the case as of 1989.

Overlapping (Z) milepoints

Overlapping milepoints, also known as 'Z' milepoints, occur anywhere along a stretch of highway between its beginning and ending milepoints. Z milepoints are assigned to the section of highway that was lengthened due to re-alignment. Enter the milepoint given, and code a 'Z' in the Mileage Type field.

Refer to the instructions for the "**Mileage Type**" field on page 26 of this manual for information on overlapping (Z) milepoints.

Milepoint Equations

Milepoint equations are created when an existing highway has been shortened due to construction, such as when a curve is straightened. The milepoint equation specifies **two different** milepoints that now exist **at a single point** on the highway. This is a method of accounting for changes in a linear measurement system without re-milepointing the entire highway.

Milepoint equations are identified in the AML by a **pink E** in the middle Roadway Code. In the image below, **MP 41.60 is equal to MP 42.25** and represents the same point on the highway.

*Automated Milepoint Log (AML) aka Highway Inventory Summary. BK = back; AH = ahead

MILEPOINT

(continued)

Calculating Distance for Milepoints that Occur inside Equations

When the crash location involves a milepoint equation, the crash data technician must calculate the milepoint to be coded. This is a 3-step process, and requires the following information:

- an existing crossroad or boundary to be used as a reference
- the desired distance from the reference crossroad or boundary to the crash location
- the “begin” and “end” Equation milepoints
- the direction of increasing milepoints for the highway

Scenario #1:

Calculate a location **one-half mile east** of Salmon River Rd. on Mt. Hood Hwy 26. Milepoints **increase to the east**, and the crash location is **east** of the **Equation Begin MP**.

Step 1: Look up the milepoint for Salmon River Rd in the AML (MP 41.45), and subtract it from the Equation **Begin MP** (41.60).

Equation Begin MP	41.60
minus Reference MP	-41.45
Reference Distance	0.15

Step 2: Subtract the “reference distance” from the distance you need to go eastward.

Distance Eastward	0.50
minus Reference Distance	-0.15
Crash Distance	0.35

Step 3: Add the result (i.e. Crash Distance) to the Equation End MP to get the crash milepoint.

Equation End MP	42.25
plus Crash Distance	+0.35
Crash Milepoint	42.60

Scenario #2:

Calculate a location **one-half mile west** of Tamarack Dr. on Mt. Hood Hwy 26. Milepoints **increase to the east**, and the crash location is **west** of the **Equation End MP**.

Step 1: Look up the milepoint for Tamarack Dr in the AML (MP 42.57). Subtract the Equation End MP from the Reference MP.

Reference MP	42.57
minus Equation End MP	-42.25
Reference Distance	0.32

Step 2: Subtract the “reference distance” from the distance you need to go westward.

Distance Westward	0.50
minus Reference Distance	-0.32
Crash Distance	0.18

Step 3: Subtract the resulting distance from the Equation Begin MP to get the crash milepoint.

Equation Begin milepoint	41.60
minus Crash Distance	-0.18
Crash Milepoint	41.42

MILEPOINT

(continued)

Note to Crash Data Technicians:

Straightline charts are helpful for determining crash locations, but are not to be used as the source for the milepoint. Use the System Set-Up book or AML, which should show the same milepoint as that imported from the CLT. If a discrepancy exists between these resources, speak to the Code Team Leader

COUNTY ROAD MILEPOINTS

Milepoints for “milepointed county roads” are obtained from the County Road Milepoint Logs stored in the unit reference area.

Leave the Milepoint field blank when coding crashes on county roads in the following counties.

- Deschutes
- Multnomah
- Washington

VALIDATIONS:

Rule #	Rule Message	Severity
17	Urban area value entered doesn't match urban area value for this highway/milepoint for this year in ITIS	Yellow/Warning
20	Functional Class value entered doesn't match functional class value for this highway/milepoint for this year in ITIS	Yellow/Warning
22	NHS value entered doesn't match NHS value for this highway/milepoint for this year in ITIS	Yellow/Warning
24	County value entered doesn't match County value for this highway/milepoint for this year in ITIS	Yellow/Warning
31	Mileage Type value entered doesn't match Mileage Type value for this highway/milepoint for this year in IT IS	Yellow/Warning
101	City value entered doesn't match City value for this highway/milepoint for this year in IT IS	Yellow/Warning
130	Milepoint value not valid for the specified Highway in the specified Crash Year	Yellow/Warning
131	When entered, the milepoint value must be <= 999.99	Red / Severe
133	Milepoint is required when Highway Number is entered	Red / Severe
146	Highway Couplet begins or ends at this milepoint. Please confirm whether crash occurred on or off the couplet, and confirm Highway Component field value.	Yellow/Warning
178	When City is not null and Highway is not null and milepoint is known, then Intersecting St # must not be blank.	Red / Severe
1026	Milepoint must be null when Highway Number is null and crash occurred inside city limits.	Red / Severe

POSTED SPEED

Format: 2 char

Code	Description
------	-------------

Blank	Not Reported. Information is not available on posted speed.
00	No statutory limit (i.e. private road open to public, such as logging, etc.)
05-65	Actual Posted Speed
99	Unknown (as stated on PAR)

INSTRUCTIONS:

Posted Speed represents the regulatory speed posted for the section of road on which the crash occurred.

This field is only coded when information regarding posted speed is available from the PAR, AML, or loaded from the Crash Locator Tool (CLT). For all other situations, leave this field blank.

On state highways, if the posted speed on the PAR conflicts with the ODOT highway inventory (AML, CLT), use the speed provided by the highway inventory. The exception to this rule is for highways where a work zone has temporarily changed the posted speed.

For all other roads, use the speed listed on the PAR.

Enter code 99 only when the PAR specifically indicates that the posted speed for the crash location is unknown and the information is not available from the AML or CLT.

See Traffic Control Device for the definition and examples of regulatory signs.

VALIDATIONS:

Rule #	Rule Message	Severity
45	When entered, Posted Speed Limit value must be <= 65	Red/Severe

CHARACTER OF ROAD

Format: 1 char

Code	Description
1	Intersection
2	Driveway or alley access
3	Straight roadway
4	Transition (change in number of lanes)
5	Curve (horizontal curve)
6	Open access or turnout.
7	Grade / Hill (vertical curve)
8	Bridge structure (overpass and underpass included)
9	Tunnel
0	Unknown

INSTRUCTIONS:

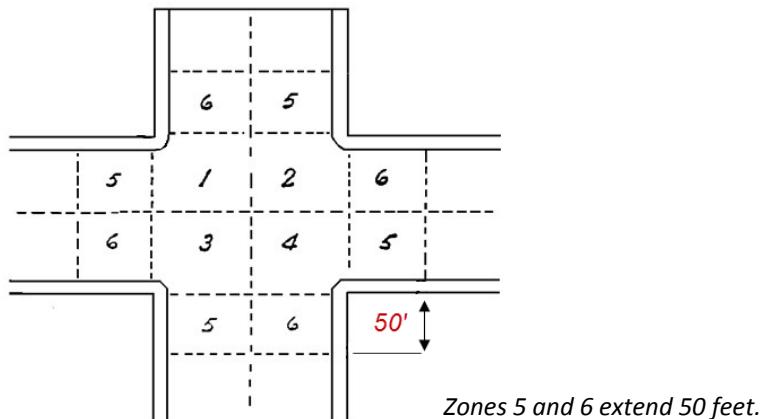

Character of Road refers to the alignment, contour, structure, or other distinctive feature that describes the roadway at the crash location.

The proper coding of this data element is critical to the crash record, since this element controls the analysis between intersectional crashes and non-intersectional crashes.

INTERSECTIONAL CRASHES

Use code 1 for **intersectional crashes**. This rule applies to all road jurisdictions (city streets, county roads, and state highways). Intersectional crashes are never coded to zones 7 or 8.

Quadrants 1, 2, 3 and 4 represent the center of the intersection.

DEFINITION: Any crash that occurs within the limits (the extended curb lines) of the intersection of two or more roads, or any crash that occurs outside the center of the intersection, within location of impact zones 5 or 6, and as a direct result of some maneuver at or because of the intersection, will be classed as intersectional and so coded.

Additional Rules for “Intersectional” Crashes

Conditions surrounding an accident that occurred outside the limits of an intersection must justify the classification of “intersection”. For example:

CHARACTER OF ROAD

(continued)

Rear-End Collisions at Intersections

Rear-end collisions involving a vehicle first in line at the intersection should be coded as **intersectional**.

Turning Maneuvers at Intersections

A crash involving a turning movement is classified as “intersectional” when the crash results from the turning movement and the impact is within location of impact zones 5 or 6. When the point of impact is beyond location of impact zones 5 or 6, the turning movement should have been completed and the **Character of Road** should be coded as “non-intersectional”.

Pedestrian Collisions at Intersections

If a pedestrian is struck while crossing from one corner of an intersection to another, code the Character of Road as **intersectional**. If a pedestrian is struck while crossing within a marked or unmarked crosswalk at the intersection, code **Character of Road** as **intersectional**.

Complex Intersections

Complex intersections and interchanges are areas where more than one road character exists. This could be an intersection that occurs at a curve or on an overpass/bridge etc. When an *intersectional crash* occurs at a complex intersection, the **Character of Road** is coded as intersection. Other road characters that exist at the intersection and are relevant to the crash should be identified through the Event field or Related Flags.

NON-INTERSECTIONAL CRASHES

Crashes that don't meet the definition of “intersectional” are “non-intersectional”. Non-intersectional crashes can occur **within the area of** a complex intersection or interchange, on a curve, bridge, etc. In such cases, the **Character of Road** field must be coded as the curve, bridge, etc. rather than as an intersection.

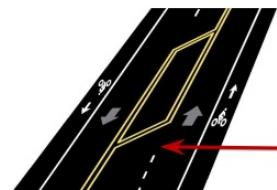

Use code 2 for crashes at **driveways** or **alley access**.

Use code 3 for crashes on **straight roads** that don't involve transitioning lanes, driveways, turn-outs, hills, bridges, curves, or tunnels.

Use code 4 for crashes involving a lane transition.

CHARACTER OF ROAD

(continued)

Use code 5 for crashes involving a horizontal **curve**.

Use code 6 for crashes involving an “**open access**” or turnout, i.e., a space adjacent to a road where vehicles may pull off to enable others to pass.

Use code 7 for crashes that occur on a grade, vertical slope, hill, etc.

Use code 8 for crashes that occur **on** or **under** a bridge structure.

Hwy 30 underpass / Hwy 91 overpass near Rickreall

Siuslaw River Bridge, Florence , Oregon

Use code 9 for crashes that occur inside a tunnel.

CODING PRIORITY

More than one **Character of Road** may exist at a crash location. For example, a crash may occur at a driveway on a hill, or on a curve built into a tunnel. In order to maintain consistency in how this field is coded by the data entry team, the following rules assign priority.

CHARACTER OF ROAD

(continued)

Intersections: If a crash occurs within an intersection as a result of a maneuver at or because of the intersection, code 1 takes precedence.

Driveways or alley access: When a crash involves a movement **into** or **out of** a driveway or alley access, code 2 takes precedence.

Bridge over-crossings and under-crossings: When a crash occurs **on** or **under** a bridge, code 8 takes precedence.

Grade (Hill) vs. Curve: When a crash location is on a vertical grade with a curve, code 7 takes precedence, unless the police report specifies that the driver failed to negotiate the curve.

Grade (Hill) vs. Turnout: When a crash involves a turnout on a grade, code 6 takes precedence.

Tunnel: If a crash occurs in a tunnel, code 9 takes precedence.

VALIDATIONS:

OFF ROADWAY

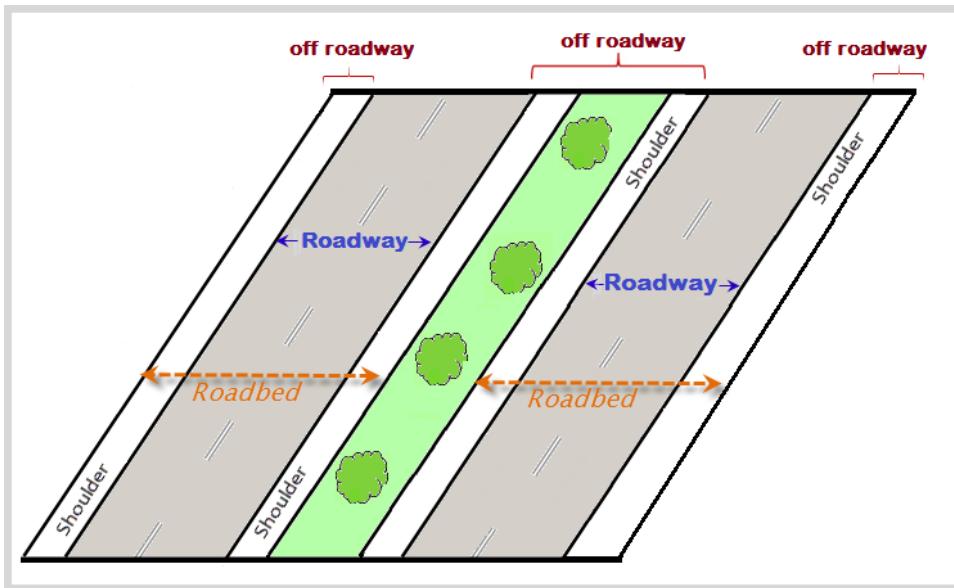

Format: 1 char

Code Description

0	No
1	Yes

INSTRUCTIONS:

Off Roadway is a yes / no field that indicates where the crash occurred in relation to the roadway. This field should be coded according to the location of the first harmful event. Crashes are considered “off roadway” if the first harmful event occurs outside the travel portion of the road (i.e. on the shoulder, roadside, parking lanes, etc.)

DEFINITION: “Roadway” is the part of a trafficway designed, improved, and ordinarily used for vehicular travel. The boundary lines are the lateral limits of the traffic lanes. Parking lanes and shoulders are not part of the roadway. A parking lane ceases to exist and is considered a traffic lane when parking along a street is prohibited.

Code 0 is used when the first harmful event of the crash occurred on the roadway. When a vehicle overturns on the roadway first and continues its path off-road, the crash is considered to have occurred “on the roadway”. Collisions with over-crossing structures are considered to be “on the roadway” if the structure was hit while the vehicle was traveling directly under it and within the travel lane.

Code 1 is used when the first harmful event of the crash occurred off the roadway. Crashes that occur with solid median barriers are considered “off roadway”, as are crashes that occur on an earth, grass median.

OFF ROADWAY

(continued)

If the Crash Type coded is **8 – Fixed Object** and the Collision Type coded is **9 – Fixed Object**, then Off Roadway **must** be coded **1 – Yes**, unless one or more of the following events are coded for the striking vehicle:

- 049 – Bridge girder or other horizontal structure overhead
- 063 – Tree branch or other vegetation overhead, etc.
- 064 – Wire or cable across or over the road
- 067 – Slides, rocks off or on road, falling rocks
- 073 – Other bump (not speed bump), pothole or pavement irregularity (Per PAR)
- 074 – Other overhead object (highway sign, signal head, etc.); not bridge
- 127 – Rock slide or land slide

VALIDATIONS:

Rule #	Rule Message	Severity
356	Off Roadway Flag must = 1 if Crash Type = Fixed Object and Collision Type = Fixed Object and the Striking Vehicle Event Codes do not equal 049, 063, 064, or 067	Red/Severe

INTERSECTION TYPE

Format: 1 char

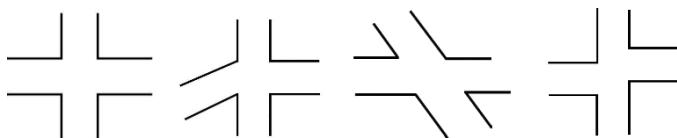

Code	Description
Blank	Not intersectional
0	Unknown intersection type
1	Cross
2	2-legged
3	3-legged
4	4-legged
5	5-legged
6	6-legged
7	7-legged
8	8-legged
9	9-legged

INSTRUCTIONS:

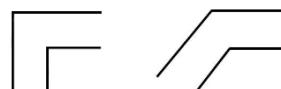

Intersection Type is a one-digit code that indicates the way in which two or more roads meet or cross. Code this field only for “intersectional” crashes (refer to Character of Road for definition on page 54). For all other crashes, leave this field blank.

Code 0 is only used when the intersecting street is unknown and there is no description provided about the intersection type.

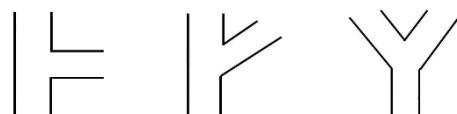

Code 1 is used for cross-type intersections:

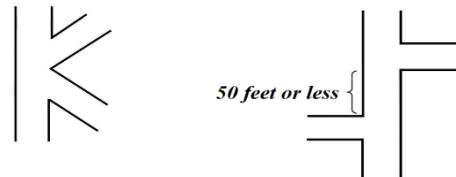

Code 2 is used for two-legged intersections:

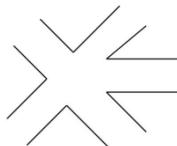

Code 3 is used for three-legged intersections:

Code 4 is used for four-legged intersections, and for cross-streets that are off-set by 50 feet or less and are controlled by a common traffic control device.

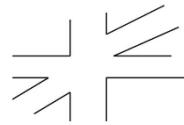

Code 5 is used for five-legged intersections:

INTERSECTION TYPE

(continued)

Code 6 is used for six-legged intersections:

Codes 7, 8 and 9 are available for rare intersections with more legs.

VALIDATIONS:

Rule #	Rule Message	Severity
1985	Intersection Type Code must be null when the Road Character does not = 1	Red / Severe

INTERSECTION RELATED

Format: 1 char

Code	Description
-------------	--------------------

0	No
1	Yes

INSTRUCTIONS:

Intersection Related is a yes / no field that indicates whether a "non-intersectional" crash is due to the movement or control of traffic through a nearby intersection. **Crashes that are coded as Intersection in Character of Road are always coded 0 in this field.**

Code 0 is used for intersectional crashes, and for non-intersectional crashes that are *not* related to the movement or control of traffic through a nearby intersection.

Code 1 is used for non-intersectional crashes that result from an activity, behavior, or control related to the movement of traffic units through an intersection.

Examples:

1. A rear-end crash that involved the first vehicle stopped at an intersection. Code **Intersection-Related Flag** as '0' – No. Code **Character of Road** as '1' – Intersection.
2. A rear-end crash that involves the second and third vehicles at an intersection, but not the first vehicle. The crash report indicates that the crash occurred due to activity, behavior, or control at the intersection. Code **Intersection-Related Flag** as '1' – Yes. Do *not* code **Character of Road** as '1' – Intersection.

VALIDATIONS:

Rule #	Rule Message	Severity
53	Intersection Related Flag must be 0 when Road Character = 1	Red / Severe

ROUNABOUT

Format: 1 char

Code	Description
0	No
1	Yes

INSTRUCTIONS:

Roundabout is a yes / no field that indicates whether or not a crash is related to the movement or control of traffic through a roundabout or traffic circle.

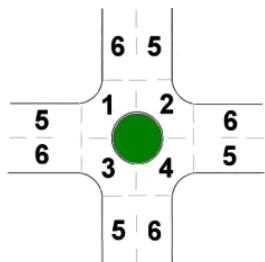

Use Code 0 when the crash location is not at a traffic circle or roundabout. The Crash Data Entry screen defaults to Code 0.

Use Code 1 when the crash occurred at a traffic circle or roundabout.

Roundabout – a circular intersection with yield control for all entering traffic, channelized approaches, counter-clockwise circulation around a central island, and appropriate geometric curvature to ensure that travel speeds on the circulatory roadway are typically less than 30 mph.

Traffic Circle – an older-style circular intersection with channelized approaches, but that does not mandate a yield control for all entering traffic.

Traffic Circle showing Location of Impact Codes

VALIDATIONS:

DRIVEWAY RELATED

Format: 1 char

Code Description

0	No
1	Yes

INSTRUCTIONS:

Driveway Related is a yes / no field that indicates whether a crash is due to the movement of traffic or activity at a driveway or alley access but did not involve the traffic units using the driveway. **If Character of Road is driveway, this field must be coded 0.**

Code 0 is used when the crash is not related to the movement of traffic into, out of, or across a driveway or alley access, even if a driveway or alley access exists at the crash location.

Code 1 is used when the crash is due to the movement of traffic or activity at a driveway or alley access but did not involve the traffic units using the driveway.

If a crash involves a traffic unit that is using a driveway at an intersection, then Character of Road = 1 (Intersection) and Driveway Related = 1 (Yes).

If a driveway exists at an intersection, but is not being used, Character of Road = 1 (Intersection) and Driveway Related = 0 (No).

Driveway

Driveway at intersection

VALIDATIONS:

NUMBER OF LANES

Format: 2 numeric

Code	Description
-------------	--------------------

Blank	Crash occurred inside intersection.
01-98	Number of all travel lanes, both directions added
99	Unknown number of lanes

INSTRUCTIONS:

Number of Lanes is a two-digit code that represents the total number of travel lanes for the involved roadway.

Code all the travel lanes for both directions of travel, even if the crash occurred on a divided highway. (This is a change from coding procedures used prior to 2003.)

Continuous left turn lanes are not included in the count of travel lanes, unless the crash involved the continuous left turn lane.

VALIDATIONS:

NUMBER OF TURNING LEGS

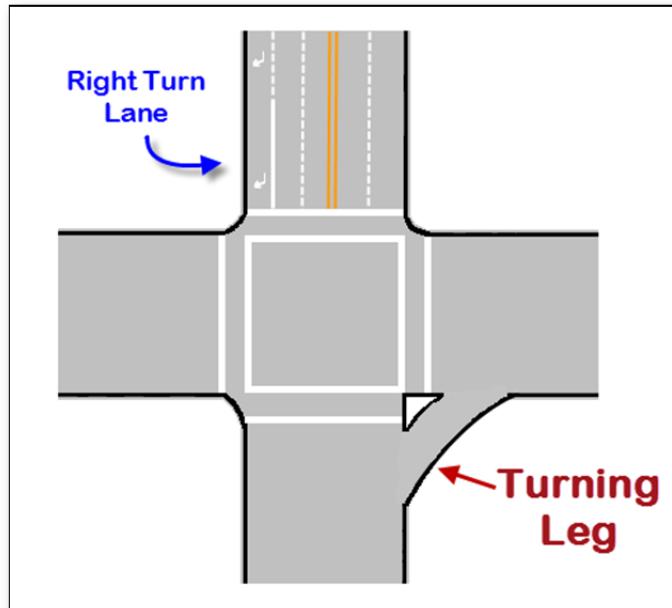

Format: 2 numeric

Code	Description
Blank	Non-intersectional crash
00	No turning legs at intersection
01-98	Actual number of turning legs at intersection
99	Unknown number of turning legs

INSTRUCTIONS:

Number of Turning Legs is a two-digit code that indicates the number of turning legs at an intersection where a crash occurs. Turn lanes are not coded in this field.

Turning Leg (configuration recognized in crash coding) is a travel lane for channelizing traffic at right-angles most commonly found at an intersection. (Not to be mistaken for a **right turn lane**.) A common form of turning leg is noted by a triangular shaped island, raised curb, or painted, that separates right-turning traffic from through traffic at an intersection.

VALIDATIONS:

MEDIAN TYPE

Format: 1 char

Code	Description
Blank	Crash occurred inside intersection
0	No physical barrier between opposing traffic on single road bed.
1	Raised median, planter or barrier
2	Earth or grass median separating opposing traffic on two road beds

INSTRUCTIONS:

Median Type is a one-digit code that indicates the type of separation that divides opposing traffic along a roadway.

Code 0 is used for continuous left turn lanes and paved/painted medians.

Code 1 is used for metal guard rails, concrete barriers, curbing, planters or other fixed barriers separating opposing directions of traffic on one roadbed.

Code 2 is used for roadways divided by earth or vegetation which may include a cable or guard rail in the center.

When using Vehicle Level Action Code 029 (*vehicle crossed, plunged over, or through median barrier*) or 033 (*vehicle crossed earth or grass median*), use the Digital Video Log (DVL) or aerial imagery to verify the correct median type has been coded.

VALIDATIONS:

LOCATION OF IMPACT

Format: 2 char

INSTRUCTIONS:

Location of Impact is a two-digit code that describes where the first harmful event occurred in relation to the roadway. The following factors determine how this field is to be coded. Instructions for each situation are presented in their own sections, below:

- the crash is intersectional
- the crash is not intersectional and occurred on a city street
- the crash is not intersectional and occurred on a state highway
- the crash is not intersectional and occurred on a county road or other jurisdiction

INTERSECTIONAL CRASHES

Code	Description
00	Left lane of a two lane turning leg
01 – 04	Quadrant representing the center of the intersection (see diagram)
05 – 06	Zone on approach or exit and within 50 feet of intersection
09	Right lane of a two lane turning leg or a single lane turning leg

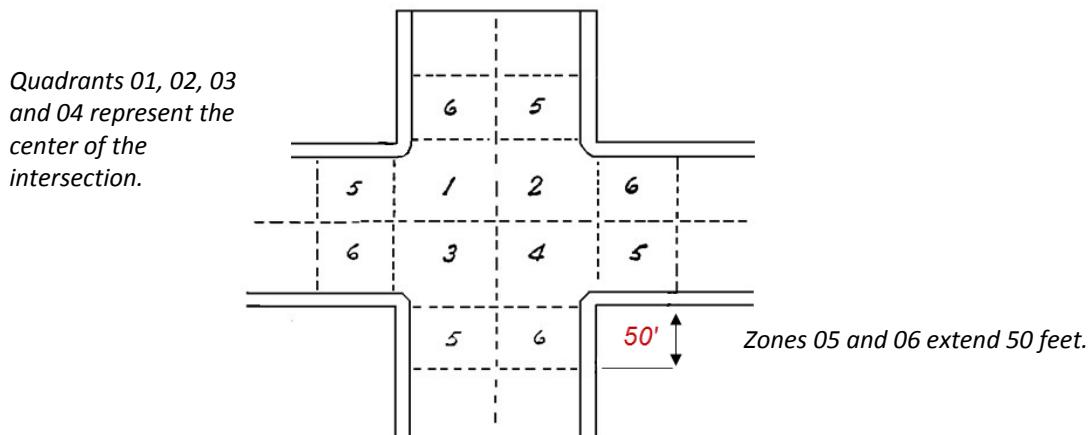

Location of Impact is coded the same way for all intersectional crashes, irrespective of jurisdiction.

Quadrants 01, 02, 03 and 04 represent the center of the intersection, with quadrants 01 and 02 always oriented towards the north or northerly direction of the road.

Zones 05 and 06 extend 50 feet from the junction of the intersecting roads. Use Code 05 or 06 for crashes that occur as a direct result of movement at or because of the intersection when the first harmful event involves the first vehicle stopped outside the center of the intersection.

Refer to Character of Road, page _____ for the definition of “Intersectional Crashes”.

Note: The leading zero for the Location of Impact codes is not shown in the diagrams that follow.

LOCATION OF IMPACT

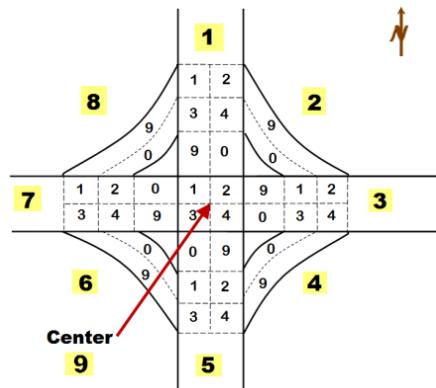

(continued)

Coding Location of Impact for Turning Legs

The diagram below shows an intersection with turning legs. The larger highlighted numbers are the **Direction from Intersection** codes. The smaller numbers represent **Location of Impact** codes.

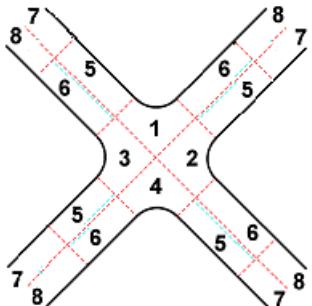

When the turning leg has only one lane, use Location of Impact Code 09.

When the turning leg has two lanes , use Code 09 for the right-hand lane entering or exiting the intersection. Use Code 00 for the other lane on the turning leg.

NON-INTERSECTIONAL CRASHES ON CITY STREETS

Code	Description
------	-------------

- | | |
|---------|---|
| 00 | Crash location unknown |
| 05 – 06 | Zone within 50 feet of intersection |
| 07 – 08 | Zone 51 feet to mid-block. Reverse these codes at mid-block to reference from the next nearest intersecting road. |

LOCATION OF IMPACT

(continued)

City streets are divided into quadrants and zones. Quadrants 01, 02, 03 and 04 represent the center of the intersection. A non-intersectional crash on a city street is coded to zone 05, 06, 07 or 08.

Zones 05 and 06 represent areas within 50 feet approaching or exiting the intersection. Use Code 05 for the **first zone on the left** at the intersection curb line. Use Code 06 for the **first zone on the right** at the intersection curb line.

Zones 07 and 08 represent areas 51 feet away from the intersection and go to the middle of the block. These two zones reverse at mid-block to reference from the next nearest intersection. Use Code 07 for the **second zone on the left**. It extends from zone 05 to mid-block. Use Code 08 for the **second zone on the right**. It extends from zone 06 to mid-block.

Use Code 00 if the location of impact is unknown.

NON-INTERSECTIONAL CRASHES ON COUNTY ROADS

Code	Description
00	Unknown
01	Same direction – beyond shoulder
02	Same direction – shoulder
03	Intended direction of travel of “striking vehicle” (one or more lanes)
04	Centerline or center turn lane
05	Opposing direction – traffic lane(s)
06	Opposing direction – shoulder
07	Opposing direction – beyond shoulder

The Location of Impact field is not intended to identify the **lane** in which the impact occurred, for non-intersectional county road crashes. This field identifies the **side of the road** on which the impact occurred, and **whether the striking vehicle was outside of its normal lane of travel** at the time of the crash.

Non-intersectional county road crashes are coded with reference to the appropriate side of the road the striking vehicle **should** be traveling on. (See **VEHICLE NUMBER** for information about the “striking vehicle”.

For non-intersectional county road crashes, the travel lane of the striking vehicle = 03. All other lane numbers ascend from that lane. Code the off-road location on the striking vehicles' side of the roadway as 01. Code the shoulder of the road as 02, centerline as 04, and the opposing lane as 05. Code the shoulder on the opposing side as 06 and the off-road location on the opposing side as 07.

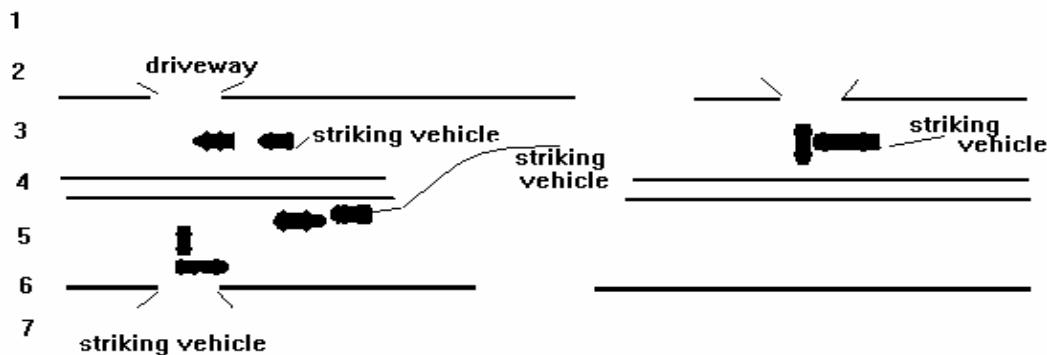

The following illustrations are presented for clarification on how to code Location of Impact for crashes non-intersectional crashes on county roads.

LOCATION OF IMPACT

(continued)

Ex. 1: Turning Into driveway, or U-turns: Striker is driving in his "intended direction of travel lane" prior to turning into a driveway or making a U-turn.

Ex. 2: Turning out of driveway: Striker leaves driveway from the location of impact code area 1. See the following examples.

NON-INTERSECTIONAL CRASHES ON STATE HIGHWAYS

Code	Description
00 - 14	Varies according to median and number of lanes (see examples)

All highway system crashes are located by milepoint. Location of Impact is coded based on the following fields:

- Number of Lanes
- Median Type, and
- the direction in which the highway milepoints increase.

Code 01 indicates that the crash occurred off roadway, in the direction of the increasing milepoints.

Code 02 represents the shoulder of the road.

Code 03 represents the right-hand lane of travel in the direction of increasing milepoints.

The codes increase sequentially according to the number of lanes and type of median on the highway.

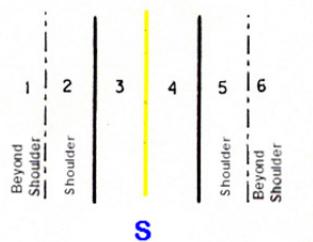

The following pages show common examples of highways, according to the direction of the increasing milepoints (South, North, East and West), the number of travel lanes, and the type of median present.

The numbers in the middle or on the side of each schematic represents the Location of Impact code for that area. (The leading zero for codes 01 - 09 is not represented.)

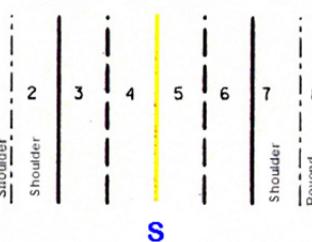

LOCATION OF IMPACT, NUMBER OF LANES and MEDIAN TYPE for STATE HIGHWAYS

(MILEPOINTS INCREASE TO THE SOUTH)

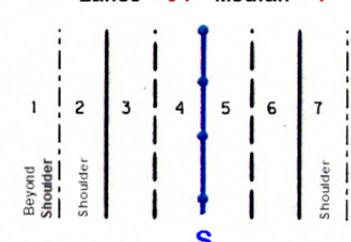

Add Mileage: North to South
Lanes = 02 Median = 0

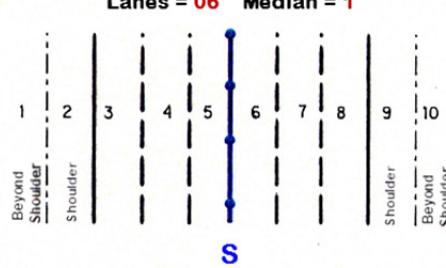

Add Mileage: North to South

Add Mileage: **East to West**
Lanes = 06 Median = 2

Add Mileage: **East to West**
Lanes = 04 Median = 2

Median Types:

- 0 = No physical barrier
- 1 = Raised median, planter or barrier
- 2 = Earth or grass median

Coding Couplets:

Roadway Number: add mileage = Rdwy 1;
non-add mileage = Rdwy 2

Median: Must = 0 (except for intersectional crashes)
Lanes: Do not total. Limit to specific Rdwy.

CRASH TYPE

Format: 1 char

Code Description

Collision with Motor Vehicle in Transport

- A Entering at angle – one vehicle stopped
- B Entering at angle – all others
- C From same direction – both going straight
- D From same direction – one turn, one straight
- E From same direction – one stopped
- F From same direction – all others
- G From opposite direction – both going straight
- H From opposite direction – one left turn, one straight
- I From opposite direction – one stopped
- J From opposite direction – all others

Other Crash Type

- 1 Motor vehicle on other roadway
- 2 Parked motor vehicle
- 3 Pedestrian
- 4 Railway train
- 6 Pedalcyclist
- 7 Animal
- 8 Fixed object
- 9 Other object
- & Overturned
- 0 Other non-collision

INSTRUCTIONS:

Crash Type is a one-character alphanumeric field. For collisions with a motor vehicle in transport, Crash Type describes the intended path of travel in relation to the first vehicle that is struck.

For other crash types, this field describes first harmful events other than those involving motor vehicles in transport, with the exception of Crash Type 1.

If a vehicle strikes a pedestrian as the first harmful, **Crash Type = Pedestrian**. This rule does not apply to crashes in which a pedestrian is struck subsequent to the first harmful event (i.e., a “sub-ped” crash; see Event code 005).

Enter code 3 (Pedestrian) in this field, **and**
Enter code 0 in the **Collision Type** field.

If Crash Type = 8 (Fixed Object) and Collision Type = 9 (Fixed Object), then Off Roadway Flag **must** be coded as 1 (Off Road), except for when the following Event codes are used:

CRASH TYPE

(continued)

- 049 – Bridge girder (horizontal structure overhead)
- 063 – Tree branch or other vegetation overhead, etc.
- 064 – Wire or cable across or over the road
- 073 – Other bump (not speed bump), pothole or pavement irregularity
- 074 – Other overhanging object (highway sign, signal head, etc.); not bridge
- 127 – Rock slide or land slide

VALIDATIONS:

COLLISION TYPE

Format: 1 char

Code	Description
1	Angle
2	Head-On
3	Rear-End
4	Sideswipe-meeting
5	Sideswipe-overtaking
6	Turning Movement
7	Parking Maneuver
8	Non-collision
9	Fixed-Object or Other-Object
0	Pedestrian
-	Backing
&	Miscellaneous

INSTRUCTIONS:

Collision Type is a one-character alphanumeric code. It refers to the angle or direction of impact between vehicles based on their intended path of travel, or to the type of first impact (i.e. Non-Collision, Fixed Object, Pedestrian, etc.). Therefore, any attempted maneuver to avoid the collision is not relevant to the coding of this field.

Coding Priority

If a vehicle is performing more than one of the movements bulleted below, at the same time, the priority for coding Vehicle Movement is as follows:

1. Parking
2. Backing
3. Turning
4. Stopped

If a vehicle strikes a pedestrian as the first harmful event, enter Code 0 (Pedestrian) in this field, and enter Code 3 in the **Crash Type** field. This rule does not apply to crashes in which a pedestrian is struck subsequent to the first harmful event (i.e., a “sub-ped” crash; see Event code 005).

If Crash Type = 8 (Fixed Object) and Collision Type = 9 (Fixed Object), then Off Roadway Flag **must** be coded as 1 (Off Road), except for when the following Event codes are used:

- 049 – Bridge girder (horizontal structure overhead)
- 063 – Tree branch or other vegetation overhead, etc.
- 064 – Wire or cable across or over the road
- 073 – Other bump (not speed bump), pothole or pavement irregularity
- 074 – Other overhanging object (highway sign, signal head, etc.); not bridge
- 127 – Rock slide or land slide

COLLISION TYPE

(continued)

DEFINITIONS:

Angle Collision – An angle collision results when vehicles collide while traveling on crossing paths. An angle collision involves one vehicle traveling on one roadway (i.e. North to South) and another vehicle entering from another roadway, open access, or driveway. (i.e. East to West). In other words, a cross-movement on one street must be attempted by a vehicle traveling on the intersecting street in order for Collision Type to be classed as angle.

Backing Collision – A backing collision results when a vehicle is backing in a traffic lane and strikes another vehicle also in a traffic lane. This type will not include backing during a parking maneuver.

Fixed Object or Other Object Collision – A fixed or other object collision results when one vehicle strikes a fixed or other object on the roadway or off roadway. The **Vehicle Event** field should be coded describing what was hit.

Head-On Collision – The head-on type of collision results when the drivers of two vehicles traveling in opposite directions on parallel paths attempt to occupy the same position at the same time and find their forward movement impeded. It is not necessary for the vehicles to collide head-on; that is, for each to be struck perpendicularly to the front of the car. It is the alteration of the intended path of travel that defines the type of collision. To conform with the definition, any attempted maneuver to avoid the collision is inconsequential to the complete crash.

Miscellaneous Collision – Miscellaneous collisions include all animal crashes except animals drawing vehicles, and all crashes not classifiable under the above types. Examples include hitting a wild or domestic animal, lost load, or drive shaft fell from vehicle.

Non-collision – A non-collision crash is one in which only one vehicle is involved initially, and is not classifiable as another collision; i.e. rollover, etc.

Parking Maneuver Collision – A parking maneuver collision results when a vehicle in the act of entering or leaving a parked position is involved in a collision. A parking maneuver continues until the vehicle has completely cleared the parked position and is moving in the traffic lane. The reverse is true for a vehicle entering a parked position.

Pedestrian Collision – A pedestrian collision results when the first harmful event is any impact between a motor vehicle in traffic and a pedestrian. This excludes any crash where a pedestrian is injured after the initial vehicle impact. In this case, the first harmful event would be the collision type (i.e. rear-end collision) with the pedestrian being coded as a supplemental event to the crash.

Rear-End Collision – A rear end collision results when a vehicle traveling in the same direction or parallel on the same path as another vehicle, collides with the rear end or a second vehicle. In this type, the direction of travel was parallel but continuous.

Sideswipe-meeting Collision – A sideswipe meeting collision results when vehicles traveling in opposite directions on parallel paths collide. The side of at least one of the vehicles must be involved.

COLLISION TYPE

(continued)

Sideswipe-overtaking Collision – A sideswipe overtaking collision results when vehicles traveling in the same direction on parallel paths collide. The side of at least one of the vehicles must be involved.

Turning movement Collision – A turning movement collision results when one or more vehicles in the act of a turning maneuver is involved in a collision with another vehicle.

VALIDATIONS:

CRASH SEVERITY

Format: 1 char

Code Description

2	Fatal crash
4	Non-fatal injury crash
5	Property damage only crash (PDO)

INSTRUCTIONS:

Crash Severity is classified according to the most severe injury sustained in the crash. For example: if there were two injuries and one fatality, use Crash Severity code 2. If there were no injuries, use Crash Severity code 5.

DEFINITIONS:

Fatal crash is a motor vehicle crash that results in fatal injuries to one or more persons. For purposes of Motor Vehicle Crash Classification, death must occur within 30 days. (See *ANSI D16.1-2007, definition 3.1.3, "Time of Classification"*.) Crashes that result from deliberate intent, suicide, homicide (not negligent homicide) and non-traffic are not included. Crashes that occur on private property or in parking lots are only coded when they involve entering or exiting the roadway.

Non-fatal injury crash is a motor vehicle crash that results in any injury not resulting in death.

Property Damage Only crash (PDO) is a motor vehicle crash in which there is no injury to any person, but damage occurred to a motor vehicle, other road vehicle, or to other property, including injury to domestic animals.

VALIDATIONS:

WEATHER CONDITION

Format: 1 char

Code	Description
0	Unknown
1	Clear
2	Cloudy
3	Rain
4	Sleet / Freezing Rain / Hail
5	Fog
6	Snow
7	Dust
8	Smoke
9	Ash

INSTRUCTIONS:

Weather Condition represents the atmospheric conditions at the time of the crash.

In Oregon, we experience heavy rain, and then the sky will clear. This creates a situation where the weather conditions can be clear but the road conditions can be wet. This combination of codes will trigger a yellow warning flag in the data entry system, but in this scenario, the coding is correct.

VALIDATIONS:

ROAD SURFACE CONDITION

Format: 1 char

Code	Description
0	Unknown
1	Dry
2	Wet
3	Snow
4	Ice

INSTRUCTIONS:

Road Surface Condition represents the condition of the travel lanes at the time of the crash.

When a crash occurs in a tunnel, the predominant weather condition outside is coded. However, this could create a situation where the Weather Condition is coded “rain” and the Road Surface Condition is coded “dry”. This combination of codes will produce a yellow warning flag in the data entry system, but in this scenario, the coding is correct.

If there is a conflict between ice and snow, and the crash report indicates that the vehicle slid on ice, code the Road Surface Condition as Ice.

VALIDATIONS:

LIGHT CONDITION

Format: 1 char

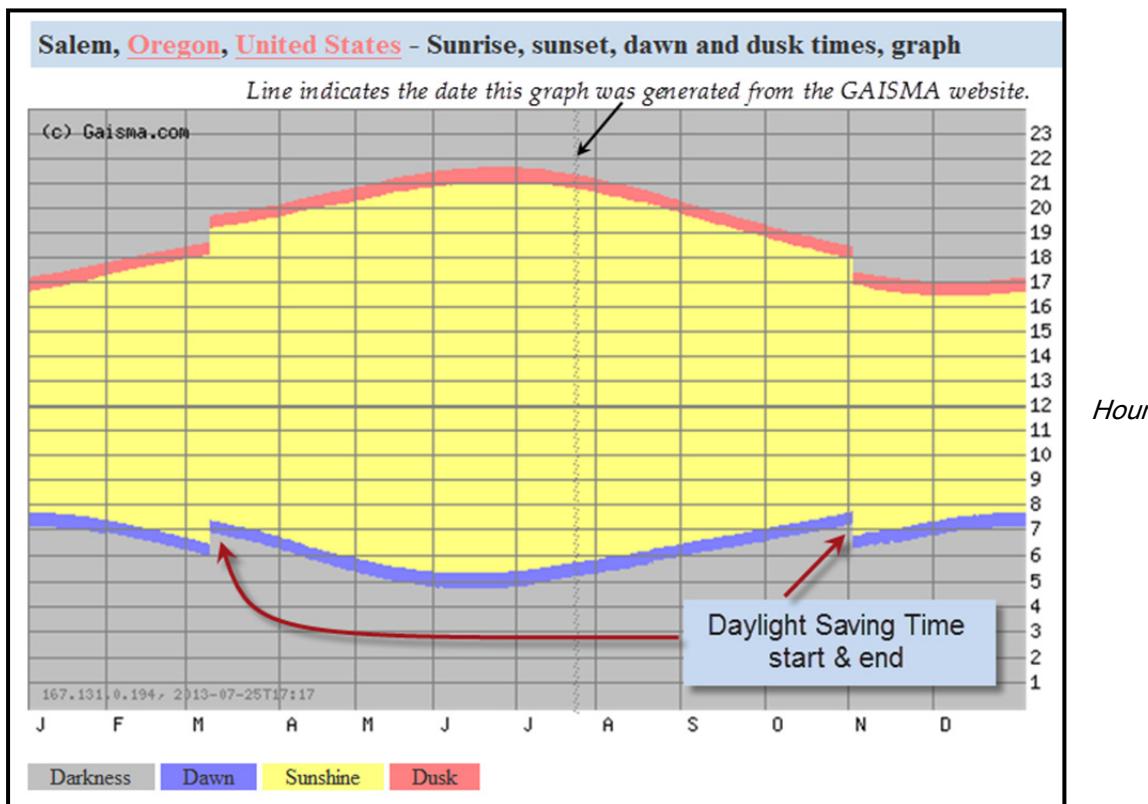

Code	Description
0	Unknown
1	Daylight
2	Darkness – with street lights
3	Darkness – no street lights
4	Dawn (Twilight)
5	Dusk (Twilight)

INSTRUCTIONS:

Light Condition represents the amount of ambient light available at the time of the crash. The code used for Light Condition should be compatible with the time of year and hour of day, unless special circumstances exist.

Do not use Code 0 – Unknown, unless **Crash Hour** is also unknown.

If light conditions are not stated on the driver report or PAR, refer to the chart below to determine the most appropriate code.

Source: GAISMA, <http://www.gaisma.com>, used with permission. Notes and labels added.

VALIDATIONS:

TRAFFIC CONTROL DEVICE

Format: 3 char

Code	Description
000	No control (as stated on Police Report)
001	Traffic signals
002	Flashing beacon – Red (stop)
003	Flashing beacon – Amber (slow)
004	Stop sign
005	Slow sign
006	Regulatory sign
007	Yield sign (2006)
008	Warning sign (2006)
009	Curve sign (2006)
010	School crossing sign or Special signal
011	Police officer, flagman, school patrol
012	Bridge gate – barrier
013	Temporary barrier
014	No passing zone
015	One way street
016	Channelization
017	Median barrier
018	Pilot car
019	Special pedestrian signal
020	Crossbuck
021	Through green arrow or signal
022	Left turn green arrow, lane markings or signal
023	Right turn green arrow, lane markings or signal
024	Wigwag or flashing lights without drop arm gate
025	Crossbuck and advance warning
026	Flashing lights with drop-arm gates
027	Supplemental overhead signal (RR x-ing only)
028	Special rail road stop sign
029	Illuminated grade crossing
037	Metered ramps
038	Rumble strip (eff. 2006)
090	Left turn refuge (when refuge is involved)
091	Right turn at all times sign, lane markings, or signal
092	Emergency signs or flares
093	Acceleration or deceleration lanes
094	Right turn prohibited on red after stopping
095	Bus stop sign and red lights
099	Unknown or not defined

INSTRUCTIONS:

Traffic Control Device (TCD) is a three-digit code that indicates the predominant control present at the crash location. More than one traffic control may be present (for example, a yield sign and a traffic signal at the same intersection), so code the control that is most pertinent to the crash.

TRAFFIC CONTROL DEVICE

(continued)

A police officer or flagger (Code 11) controlling traffic takes precedence over other controls.

Images of some traffic control devices are depicted in the “Samples” section below. For more examples, refer to the Oregon Driver Manual.

DEFINITIONS

Channelization: A method or device by which traffic is deliberately directed or diverted to another roadway or lane.

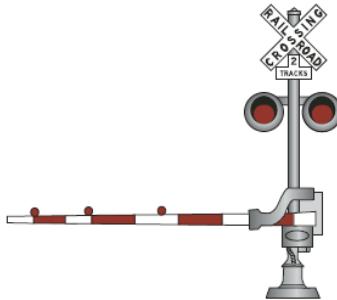

Flagger: A person who controls the movement of vehicular traffic through school zones, crash sites, or road construction areas using a sign, hand or flag signals. See ORS 811.230

GRAPHICS:

Rail Crossing controls:

RR Crossbucks

RR Drop Arm Gate

School Zone signs:

Overhead School Crossing Sign

VALIDATIONS:

TRAFFIC CONTROL DEVICE FUNCTIONAL

Format: 1 char

Code	Description
------	-------------

0	No
1	Yes

INSTRUCTIONS:

Traffic Control Device Functional is a yes/no field that indicates if the Traffic Control Device coded was functional at the time of the crash.

Code 0 is used when the traffic control device is present but is not functioning correctly.

Code 1 is the default code. It is used when:

- a traffic control is known to be present and is known to be functioning properly
- a traffic control is known to be present but no information is available on whether the device is functioning properly
- no information exists on the presence of traffic control devices (assuming that if one exists, it is functioning correctly).

VALIDATIONS:

INVESTIGATING AGENCY

Format: 1 char

Code	Description
0	Crash was not investigated by police
1	State Police - Report has been received
2	County Police - Report has been received
3	City Police - Report has been received
4	Unknown - Report has been received
5	On Scene - Report has not been received
6	Tribal Police
7	Other Police (includes safety and security officers)

INSTRUCTIONS:

Investigating Agency indicates whether law enforcement was present at the scene, if a police crash report has been received, and which agency reported the crash.

VALIDATIONS:

CRASH LEVEL EVENTS

Format: 3 char, 3 char, 3 char

Code	Description
Blank	None applicable at this level
001	Occupant fell, jumped, or was ejected from moving vehicle
002	Passenger interfered with driver
003	Animal or insect in vehicle interfered with driver
004	Pedestrian indirectly involved (not struck)
005	"Sub-Ped": pedestrian injured subsequent to collision, etc.
006	Pedal-cyclist indirectly involved (not struck)
007	Hitchhiker (soliciting a ride)
008	Passenger or non-motorist being towed or pushed on conveyance
009	Actively getting on or off stopped or parked vehicle (must have physical contact with vehicle)
010	Overturned after first harmful event
011	Vehicle being pushed
012	Vehicle towed or had been towing another vehicle
013	Vehicle forced by impact into another vehicle, cyclist or pedestrian
014	Vehicle set in motion by non-driver (child released brakes, etc.)
015	At or on railroad right-of-way (not light-rail)
016	At or on light-rail right-of-way
017	Train struck vehicle
018	Vehicle struck train
019	Vehicle struck railroad car on roadway
020	Jackknife: trailer or towed vehicle struck towing vehicle
021	Trailer or towed vehicle overturned
022	Trailer connection broke
023	Detached trailing object struck other vehicle, non-motorist, or object
024	Vehicle door opened into adjacent traffic lane
025	Wheel came off
026	Hood flew up
028	Lost load, load moved or shifted
029	Tire failure
030	Pet: cat, dog and similar
031	Stock: cow, calf, bull, steer, sheep, etc.
032	Horse, mule, or donkey
033	Horse and rider
034	Wild animal, game (includes birds; not deer or elk)
035	Deer or elk, wapiti
036	Animal-drawn vehicle
037	Culvert, open low or high manhole
038*	Impact attenuator
039	Parking meter
040	Curb (also narrow sidewalks or bridges)
042	Leading edge of guardrail
043	Guard rail (not metal median barrier)
044	Median barrier (raised or metal)
045	Retaining wall or tunnel wall
046	Bridge railing or parapet (on bridge or approach)

CRASH LEVEL EVENTS

(continued)

- 047 **Bridge abutment (approach ends)**
048 Bridge pillar or column (even if struck protective guard rail first)
049 Bridge girder (horizontal bridge structure overhead)
050 Traffic raised island
051* Gore
052 Pole – type unknown
053 Pole – power or telephone
054 Pole – street light only
055 Pole – traffic signal and/or ped signal only
056 Pole – sign bridge
057 Stop or yield sign
058 Other sign, including street signs
059 Hydrant
060 Delineator or marker (reflector posts)
061 Mailbox
062 Tree, stump or shrubs
063 Tree branch or other vegetation overhead, etc.
064 Wire or cable across or over the road
065 Temporary sign or barricade in road, etc.
066 Permanent sign or barricade in/off road
068 Foreign obstruction / debris in road (not gravel)
069 Equipment working in/off road
070 Other equipment in or off road (including parked trailer, boat)
071 Wrecker, street sweeper, snow plow or sanding equipment
072 Rock, brick or other solid wall (2004)
073 Other bump (not speed bump), pothole or pavement irregularity (Per PAR)
074 Other overhead object (highway sign, signal head, etc.); not Bridge
075 Bridge or road cave in
076 High water
077 Snow bank
078 Low or high shoulder at pavement edge
079 Cut slope or ditch embankment
080 Struck by rock or other object set in motion by other vehicle, including lost loads. (do not use with code 081)
081 Struck by rock or other moving, falling or flying object. (do not use with code 080)
082 Vehicle obscured view
083 Vegetation obscured view
084 View obscured by fence, sign, phone booth, etc.
085 Wind gust
086 Vehicle immersed in body of water
087 Fire or explosion
089 Crash related to another separate crash
090 Two-way traffic on divided roadway all routed to one side
091 Building, other structure
092 Other (phantom) non-contact vehicle (on PAR or witness statement)

CRASH LEVEL EVENTS

(continued)

- 093 Cell phone (on PAR or report submitted by driver using phone)
- 094 Police report indicates teenage driver of an involved vehicle was in violation of graduated license program
- 095 Guy wire
- 096 Berm (earthen or gravel mound)
- 097 Gravel in roadway
- 098 Abrupt edge
- 099 Cell phone use witnessed by other participant
- 100 Fixed object, unknown type
- 101 Non-Fixed object, other or unknown type
- 102 Texting**
- 103 Work Zone Worker**
- 104 Passenger riding on vehicle exterior
- 105 Passenger riding on pedalcycle
- 106 Pedestrian in non-motorized wheelchair
- 107 Pedestrian in motorized wheelchair
- 108 Law Enforcement / Police Officer**
- 109 "Sub-Bike": pedal-cyclist injured subsequent to collision, etc.**
- 110 Non-motorist struck vehicle
- 111 Street car or trolley (on rails or overhead wire system) struck vehicle
- 112 Vehicle struck street car / trolley (on rails or overhead wire system)
- 113 At or on street car or trolley right-of-way
- 114 Vehicle struck railroad equipment on tracks (not train)
- 115 Distracted by navigation system or GPS device**
- 116 Distracted by other electronic device**
- 117 Rail crossing drop arm gate**
- 118* Expansion joint**
- 119* Jersey barrier**
- 120 Wire or cable median barrier
- 121 Fence**
- 123 Loose object in vehicle struck occupant**
- 124 Sliding or swerving due to wet, icy, slippery or loose surface
- 125 Shoulder gave way
- 126 Rocks / boulder (not gravel; not rock slide)**
- 127 Rock slide or land slide**
- 128 Curve present at crash location (do not use with code 130)**
- 129 Vertical grade, hill present at crash location (do not use with code 131)**
- 130 View obscured by curve (do not use with code 128)**
- 131 View obscured by vertical grade, hill (do not use with code 129)**
- 132 View obscured by vehicle window conditions**
- 133 View obscured by water spray**

INSTRUCTIONS:

Event is a three-digit code that describes an incident or situation contributing to or involved in the crash. Events generally represent occurrences of injury or damage to a person or property, but they may also identify other factors related to the crash.

CRASH LEVEL EVENTS

(continued)

On the Crash Level, enter the Events that relate to the overall crash, in the order of occurrence. Up to three Event codes are allowed.

If more than three events occur, code the three most significant events in relation to the crash.

This field is also available on the Vehicle and Participant Levels.

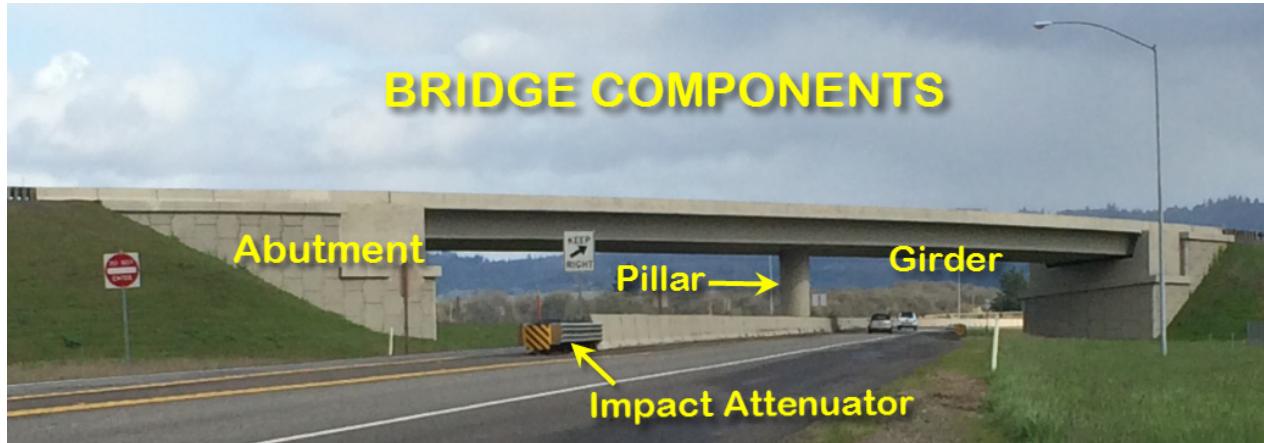

DEFINITIONS:

Bridge Abutment: A retaining wall supporting the ends of a bridge

Bridge Girder: A large beam beneath the deck of the bridge: or other horizontal structure that supports vertical loads by resisting bending.

Bridge Pillar or Column: A vertical structure that resists compression and supports the ends of a bridge between abutments.

Bridge Railing or Parapet: A protective wall or fence built at the outermost edge of the bridge roadway or sidewalk portion of a bridge to protect pedestrians and vehicles.

CRASH LEVEL EVENTS

(continued)

Expansion Joint: Engineered “pre-planned cracks” in concrete slabs that allow for the structure to expand when it is heated during the day, and to contract when it is cold at night or in the winter. They permit independent vertical and horizontal movement between adjoining parts of the structure and help minimize cracking.

Gore: An area inside the triangular space that divides a ramp exit or entrance from the mainline roadway. Its purpose is to provide recovery room for a vehicle. Impact attenuating devices are usually located inside the gore area.

Guy Wire: A stabilizing brace made of cable, wire or rope that is used to secure or steady a sign, pole or structure.

Impact attenuator: A device used to divert and decelerate impacts of vehicles from striking more rigid objects, in order to reduce the crash severity. Examples include barrels filled with water or sand and plastic collapsible structures. (see “Bridge Components” photo on previous page)

VALIDATIONS:

CRASH LEVEL EVENTS by CATEGORY

This list groups Event codes by category. Some Events apply to more than one category.

Animal

- 003 Animal or insect in vehicle interfered with driver
- 030 Pet: cat, dog and similar
- 031 Stock: cow, calf, bull, steer, sheep, etc.
- 032 Horse, mule, or donkey
- 033 Horse and rider
- 034 Wild animal, game (includes birds; not deer or elk)
- 035 Deer or elk, wapiti
- 036 Animal-drawn vehicle

Avoiding

These codes may be used in conjunction with Vehicle Action code 007 (successful avoidance).

- 004 Pedestrian indirectly involved (not struck)**
- 006 Pedal-cyclist indirectly involved (not struck)**
- 007 Hitchhiker (soliciting a ride)
- 030 Pet: cat, dog and similar
- 031 Stock: cow, calf, bull, steer, sheep, etc.
- 032 Horse, mule, or donkey
- 033 Horse and rider
- 034 Wild animal, game (includes birds; not deer or elk)
- 035 Deer or elk, wapiti
- 036 Animal-drawn vehicle
- 068 Foreign obstruction / debris in road (not gravel)
- 073 Other bump (not speed bump), pothole or pavement irregularity (Per PAR)**
- 092 Other (phantom) non-contact vehicle (on PAR or report)

Distractions

- 002 Passenger interfered with driver
- 003 Animal or insect in vehicle interfered with driver
- 004 Pedestrian indirectly involved (pedestrian not struck)**
- 006 Pedal-cyclist indirectly involved (pedal-cyclist not struck)**
- 007 Hitchhiker (soliciting a ride)
- 030 Pet: cat, dog and similar
- 031 Stock: cow, calf, bull, steer, sheep, etc.
- 032 Horse, mule, or donkey
- 033 Horse and rider
- 034 Wild animal, game (includes birds; not deer or elk)
- 035 Deer or elk, wapiti
- 092 Other (phantom) non-contact vehicle (on PAR or report)
- 093 Cell phone (on PAR or report submitted by using phone)
- 099 Cell phone use witnessed by other participant
- 102 Texting (eff. 2014)**
- 115 Distracted by navigation system or GPS device**
- 116 Distracted by other electronic device**

CRASH LEVEL EVENTS by CATEGORY

(continued)

Fixed Object

- 037 Culvert, open low or high manhole
- 038* Impact attenuator
- 039 Parking meter
- 040 Curb (also narrow sidewalks or bridges)
- 042 Leading edge of guardrail
- 043 Guard rail (not metal median barrier)
- 044 Median barrier (raised or metal)
- 045 Retaining wall or tunnel wall
- 046 Bridge railing **or parapet** (on bridge or approach)
- 047 Bridge abutment **(approach ends)**
- 048 Bridge pillar or column (even if struck protective guard rail first)
- 049*** **Bridge girder (horizontal bridge structure overhead)**
- 050 Traffic raised island
- 052 Pole – type unknown
- 053 Pole – power or telephone
- 054 Pole – Street light only
- 055 Pole – Traffic signal and/or ped signal only
- 056 Pole – Sign bridge
- 057 Stop or yield sign
- 058 Other sign, including street signs
- 059 Hydrant
- 060 Delineator or marker (reflector posts)
- 061 Mailbox
- 062 Tree, stump or shrubs
- 063 Tree branch or other vegetation overhead, etc.
- 064 Wire or cable across or over the road
- 066 Permanent sign or barricade in/off road
- 072 Rock, brick or other solid wall **(eff. 2004)**
- 073 Other bump (not speed bump), pothole or pavement irregularity (Per PAR)**
- 074 Other overhead object (highway sign, signal head, etc.); not bridge**
- 075 Bridge or road cave in
- 077 Snow bank
- 078 Low or high shoulder at pavement edge**
- 079 Cut slope or ditch embankment
- 091 Building, other structure**
- 095 Guy wire
- 096 Berm (earthen or gravel mound)
- 098 Abrupt edge
- 100 Fixed object, unknown type
- 118 Expansion joint**
- 119 Jersey Barrier**
- 120 Wire or cable median barrier
- 121 Fence**
- 126 Rocks / boulder (not gravel; not rock slide)**
- 127 Rock slide or land slide**

CRASH LEVEL EVENTS by CATEGORY

(continued)

Miscellaneous

- 010 Overturned after first harmful event
- 011 Vehicle being pushed
- 012 Vehicle towed or had been towing another vehicle
- 013 Vehicle forced by impact into another vehicle, cyclist or pedestrian
- 051* Gore
- 076 High water
- 085 Wind gust
- 086 Vehicle immersed in body of water
- 087 Fire or Explosion
- 089 Crash related to another separate crash
- 090 Two-way traffic on divided roadway all routed to one side
- 094 Police report indicates teenage driver of an involved vehicle was in violation of graduated license program
- 124 Sliding or swerving due to wet, icy, slippery or loose surface
- 125 Shoulder gave way
- 128 Curve present at crash location**
- 129 Vertical grade, hill present at crash location**

Non Fixed Object

- 065 Temporary sign or barricade in road, etc.
- 068 Foreign obstruction / debris in road (not gravel)
- 069 Equipment working in/off road
- 070 Other equipment in or off road (including parked trailer, boat)
- 080 Struck by rock or other object set in motion by other vehicle, including lost loads. (*do not use with code 081*)**
- 081 Struck by rock or other moving, falling or flying object. (*do not use with code 080*)**
- 097 Gravel in roadway
- 101 Non-Fixed object, other or unknown type
- 117 Rail crossing drop arm gate**

Non-Motorist

- 004 Pedestrian indirectly involved (pedestrian not struck)**
“Sub-Ped”: pedestrian injured subsequent to collision
- 006 Pedal-cyclist indirectly involved (pedal-cyclist not struck)**
- 007 Hitchhiker (soliciting a ride)
- 008 Passenger or non-motorist being towed or pushed on conveyance
- 011 Vehicle being pushed
- 024 Vehicle door opened into adjacent traffic lane
- 036 Animal-drawn vehicle
- 103 Work Zone Worker**
- 105 Passenger riding on pedalcycle
- 106 Pedestrian in non-motorized wheelchair
- 107 Pedestrian in motorized wheelchair
- 108 Law Enforcement / Police Officer**
- 109 “Sub-Bike”: pedal-cyclist injured subsequent to collision**
- 110 Non-motorist struck vehicle

CRASH LEVEL EVENTS by CATEGORY

(continued)

Occupant

- 001 Occupant fell, jumped, or was ejected from moving vehicle**
- 002 Passenger interfered with driver
- 008 Passenger or non-motorist being towed or pushed on conveyance**
- 009 Getting on or off stopped or parked vehicle (has physical contact with vehicle)
- 014 Vehicle set in motion by non-driver (child released brakes, etc.)
- 094 Police report indicates teenage driver of an involved vehicle was in violation of graduated license program
- 104 Passenger riding on vehicle exterior
- 108 Law Enforcement / Police Officer**
- 123 Loose object in vehicle struck occupant**

Rail Related

- 015 At or on railroad right-of-way (not light-rail)
- 016 At or on light-rail right-of-way
- 017 Train struck vehicle
- 018 Vehicle struck train
- 019 Vehicle struck railroad car on roadway
- 111 Street car or trolley (on rails or overhead wires) struck vehicle
- 112 Vehicle struck street car / trolley (on rails or overhead wires)
- 113 At or on street car or trolley right-of-way
- 114 Vehicle struck railroad equipment on tracks (not train)
- 117 Rail Crossing Drop Arm Gate**

View Obscured

- 082 Vehicle obscured view
- 083 Vegetation obscured view
- 084 View obscured by fence, sign, phone booth, etc.
- 130 View obscured by curve**
- 131 View obscured by vertical grade, hill**
- 132 View obscured by vehicle window conditions**
- 133 View obscured by water spray**

Vehicle Related

- 010 Overturned after first harmful event
- 011 Vehicle being pushed
- 012 Vehicle towed or had been towing another vehicle
- 013 Vehicle forced by impact into another vehicle, cyclist or pedestrian
- 014 Vehicle set in motion by non-driver (child released brakes, etc.)
- 020 Jackknife: trailer or towed vehicle struck towing vehicle
- 021 Trailer or towed vehicle overturned
- 022 Trailer connection broke
- 023 Detached trailing object struck other vehicle, non-motorist, or object (eff. 2004)
- 024 Vehicle door opened into adjacent traffic lane
- 025 Wheel came off

CRASH LEVEL EVENTS by CATEGORY

(continued)

- 026 Hood flew up
- 028 Lost load, load moved or shifted
- 029 Tire failure
- 071 Wrecker, street sweeper, snow plow or sanding equipment
- 124 Sliding or swerving due to wet, icy, slippery or loose surface

CRASH LEVEL CAUSE

Format: 2 char, 2 char, 2 char

Code	Description
00	No cause associated at this level
01	Speed too fast for conditions (not exceeding limit)
02	Did not yield right-of-way
03	Passed stop sign or red flasher
04	Disregarded traffic signal
05	Drove left of center on two-way road; straddling the center line
06	Improper overtaking
07	Followed too closely
08	Made improper turn
10*	Other improper driving
11	Mechanical defect
12*	Other (not improper driving)
13	Improper change of traffic lanes
14	Disregarded other traffic control device
15	Wrong way on one-way roadway (Also when roadway has a solid or earth median and vehicle is traveling on wrong side)
16	Driver drowsy / fatigued / sleepy
17	Physical Illness
18	Non-Motorist illegally in roadway
19	Non-Motorist clothing not visible
20	Vehicle improperly parked
21	Defective steering mechanism
22	Inadequate or no brakes
24	Vehicle lost load or load shifted
25	Tire failure
26	Phantom / non-contact vehicle
27	Inattention
28	Non-Motorist Inattention
29	Failed to avoid vehicle ahead)
30	Driving in excess of posted speed
31	Speed Racing (Per PAR or self-reported)
32	Careless Driving (Per PAR or self-reported)
33	Reckless Driving (Per PAR or self-reported)
34	Aggressive Driving (Per PAR or self-reported)
35	Road Rage (Per PAR or self-reported)
40	View Obscured
50	Improper use of median or shoulder

INSTRUCTIONS:

Cause is a two-digit code that represents the circumstance(s) most responsible for the occurrence of the crash. Enter the codes that explain why the crash happened, in the order of predominance.

A Cause field is also available on the Vehicle and Participant Levels, to specify the vehicle or participant that precipitated the crash, when applicable.

CRASH LEVEL CAUSE

(continued)

Each crash must have at least one Cause code entered on the Crash Level, but up to three are allowed.

Code 5 is used when the vehicle is straddling the center line or driving on wrong side of an undivided two way road.

Code 10 is used when a driver error was a factor in the crash, but no other cause code applies.

Code 12 is used when improper driving was not a factor in the crash, and no other Cause code applies. This code should only be used when no other cause is applicable to the crash. For example:

- deer jumps out in front of vehicle, leaving driver no time to react,
- illness,
- passenger interfered with driver
- mechanical defect.

Code 15 is used when the vehicle is traveling on the wrong side of a divided roadway or traveling the wrong direction on a one way road.

Code 34 is used only when the PAR states that the crash involved aggressive driving. It must not be used based solely on witness statements.

Code 35 is used when **collateral damage** results from an act of road rage. Do not use this code when the collision fits the criteria for road rage, which falls under Deliberate Intent. Road rage incidents are excluded from the Crash Data System.

Do not use codes 34 or 35 without approval from the Code Team Leader.

AGGRESSIVE DRIVING VS. ROAD RAGE:

Aggressive driving is a progression of unlawful driving actions that creates a hazardous situation. The driver's intention is generally to "beat" traffic or express dissatisfaction with the traffic environment; not to use the vehicle as a weapon. (USDOT, National Highway Traffic Safety Administration, retrieved from

http://www.nhtsa.dot.gov./people/injury/aggressive/Aggressive%20Web/sse_1.html)

For example:

- Cutting other vehicles off in a lane, or deliberately preventing someone from merging *but not intending to collide with other vehicle*

Aggressive driving is a traffic offense; whereas Road Rage is a criminal offense.

Road rage is defined as "an assault with a motor vehicle or other dangerous weapon by the operator or passenger(s) of another motor vehicle, or an assault precipitated by an incident that occurred on a roadway." (USDOT, National Highway Traffic Safety Administration, retrieved from http://www.nhtsa.dot.gov./people/injury/aggressive/Aggressive%20Web/sse_1.html)

CRASH LEVEL CAUSE

(continued)

In order for an incident to be defined as **road rage**, there must be "**willful and wanton disregard for the safety of others.**" In other words, road rage means that someone deliberately tried to harm you as a result of something that happened while you were driving your car.

Examples of Crashes with Cause Coded as “Road Rage” (must be on PAR):

1. A driver flashing lights and/or sounding the horn excessively, causing distraction to another driver, resulting in that other driver colliding with a vehicle or fixed object.
2. A motorist fleeing from vehicle driven by an angry spouse crashes unintentionally into a third vehicle.

Example of Road Rage Crashes. Do not enter these crashes into the Crash Data System

1. Driver or passenger throwing projectiles from a moving vehicle with the intent of damaging other vehicles, pedestrians or pedal-cyclists
2. Passenger or driver shooting at vehicles, pedestrians or pedal-cyclists
3. Intentionally causing a collision between vehicles
4. Exiting the car intending to start confrontations, including striking other vehicles with an object
5. Deliberately running other vehicle off the roadway
6. Deliberately striking a vehicle, pedestrian, pedal-cycle or object

VALIDATIONS:

CRASH LEVEL CAUSE by CATEGORY

This list groups Cause codes by category. Some Cause codes apply to more than one category.

Behavior

- 02 Did not yield right-of-way
- 03 Passed stop sign or red flasher
- 04 Disregarded traffic signal**
- 05 Drove left of center on two-way road
- 06 Improper overtaking
- 07 Followed too closely
- 08 Made improper turn
- 10 Other improper driving
- 13 Improper change of traffic lanes
- 14 Disregarded other traffic control device
- 15 Wrong way on one-way roadway. (Also when roadway has a solid or earth median and vehicle is deliberately traveling on wrong side)
- 16 Driver drowsy / fatigued / sleepy
- 17 Physical Illness (eff. 2014)
- 18 Non-Motorist illegally in roadway
- 19 Non-Motorist clothing not visible
- 27 Inattention
- 28 Non-Motorist Inattention**
- 29 Failed to avoid vehicle ahead**
- 31 Speed Racing (Per PAR or self-reported)
- 32 Careless Driving (Per PAR or self-reported)
- 33 Reckless Driving (Per PAR or self-reported)
- 34* Aggressive Driving (Per PAR or self-reported)
- 35* Road Rage (Per PAR or self-reported)
- 50 Improper use of median or shoulder**

*DO NOT use codes 34 or 35 without approval from code leader.

Miscellaneous

- 00 No cause associated at this level
- 10 Other improper driving
- 12 Other (not improper driving)
- 26 Phantom / non-contact vehicle
- 40 View Obscured**

Speed

- 01 Speed too fast for conditions (not exceeding limit)
- 30 Driving in excess of posted speed
- 31 Speed Racing (Per PAR or self-reported)

Vehicle Related

- 11 Mechanical defect
- 20 Vehicle improperly parked
- 21 Defective steering mechanism
- 22 Inadequate or no brakes
- 24 Vehicle lost load or load shifted
- 25 Tire failure

SCHOOL ZONE

Format: 1 char

Code	Description
Blank	Not reported
0	No
1	Yes
9	Unknown

INSTRUCTIONS:

School Zone is a one-digit code that indicates the crash occurred:

- on a road adjacent to school grounds, and that is marked by signs indicating a school zone with words, symbols, or a combination of words and symbols that give notice to the presence of the school zone.
- in a crosswalk that is not adjacent to school grounds but that is marked by such signs

This definition of “School Zone” is found in ORS 801.462.

Code 0 is used when information clearly indicates that the crash did not occur inside a designated school zone.

Code 1 is used when information clearly indicates that a crash occurred inside a school zone.

Code 9 is used when information indicates that a designated school zone exists near the area of the crash, but it is unknown if the crash occurred within the designated school zone boundaries.

Leave this field blank If no information is available on the existence of a designated school zone.

See “Traffic Control Device” for images of school zone signs.

VALIDATIONS:

WORK ZONE

Format: 1 char

Code	Description
Blank	Not reported
0	No
1	Yes
9	Unknown

INSTRUCTIONS:

Work Zone is a one-digit code that indicates if the crash occurred in a work zone.

A work zone is an area identified by advance warning where road construction, repair, maintenance, or utility work is being done on or adjacent to a highway, regardless of whether or not workers are present. For CDS, road construction, repair, maintenance or utility work includes, but is not limited to, the setting up and dismantling of cones, barriers or advance warning systems.

If no information is available on the existence of a work zone, leave this field blank.

Code 0 is used when information from the driver or police report clearly indicates that no work zone was present.

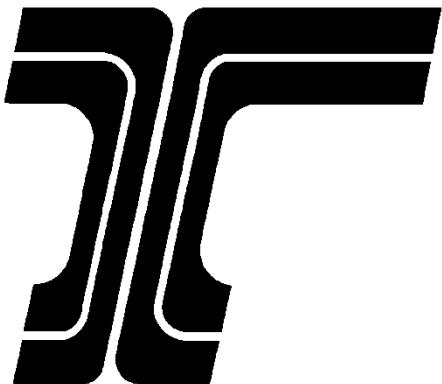

Code 1 is used when information on the driver or police report clearly indicates that a crash occurred inside a work zone, or where road construction, maintenance, utility work, cones or flaggers are present.

Code 9 is used when information indicates that a work zone exists near the area of the crash, but it is unknown if the crash occurred within the work zone boundaries.

VALIDATIONS:

Section II

VEHICLE LEVEL

VEHICLE NUMBER

Format: 2 char

Code	Description
01-99	Assigned sequentially for each vehicle.

INSTRUCTIONS:

Vehicle Number is a two-digit numeric field. It is a sequential number assigned by the Crash Data Entry System for each vehicle involved in the crash. The code is system-generated, but may be changed by the crash data technician, if needed, to modify the entry order of the vehicles.

Always code the striking vehicle first. The term "striking vehicle" refers to the vehicle that initially impacted a second vehicle, an object, pedestrian or pedal-cyclist.

The striking vehicle is not necessarily the vehicle that was in error.

Do not generate a vehicle record for pedestrians, pedal-cyclists, or other non-motorists.

VALIDATIONS:

VEHICLE OWNERSHIP

Format: 1 char

Code	Description
1	Private
2	U.S. (federal) Government
3	Public(city, county, state)
4	Rental vehicle
5	Stolen vehicle
9	Unknown ownership

INSTRUCTIONS:

Vehicle Ownership is a one-digit code. Ownership information is obtained from the driver report and/or PAR.

Code 1 includes vehicles privately owned motor vehicles, including corporate vehicles used for business purposes not otherwise described above.

Code 5 is used for stolen vehicles. This code takes precedence over all other ownership codes.

VALIDATIONS:

SPECIAL USE

Format: 1 char

Code	Description
0	No special use
1	Police
2	Fire
3	Ambulance
4	Hearse
5	Taxi
6	Logging
7	Farm ("F" Plate)
8	Military
9	Unknown use

INSTRUCTIONS:

Special Use is a one-digit code indicating that the vehicle is being used for a purpose that may not be readily apparent from its design. The vehicle may or may not have special markings to indicate its usage type.

Police and Fire vehicles are always considered to be in special use, though they may not be in emergency use at the time of the crash.

VALIDATIONS:

VEHICLE TYPE

Format: 2 char

Code	Description
01	Passenger car, pickup, van, light delivery, and custom van
02	Truck tractor with no trailers (bobtail)
03	Farm tractor or self-propelled farm equipment (not truck)
04	Truck tractor with trailer/mobile home in tow
05	Truck with non-detachable bed: <i>panel truck, self-propelled crane, tow truck, fire truck, refuse packer, leach packer, log grappler, etc.</i>
06	Moped, mini-bike, motor scooter (seated), or motorized bicycle
07	School bus, or van used to transport students
08	Other bus <i>for flexi-bus or articulated bus, code "trailer"</i>
09	Motorcycle, dirt bike. <i>for side car, code "trailer".</i>
10	Other vehicle type: <i>forklift, backhoe, mailster, go cart, golf cart, lawnmower, snowplow, street cleaner, road grader, ice cream scooter, meter maid scooter</i>
11	Motorhome
12	Motorized street car or trolley, not using rails or wires
13	ATV
14	Motorized scooter (standing)
15	Snowmobile
99	Unknown vehicle type

INSTRUCTIONS:

Vehicle Type is a two-digit code that identifies the general class of vehicle involved in a crash.

Code 02 is used for truck tractors designed to pull a trailer, but with no trailer attached. This type of vehicle is commonly called a “bobtail”.

Code 03 is used for farm tractors, F-plated trucks and self-propelled farm machinery. Do not use this code for motor carrier trucks.

Code 04 is used for truck tractors that have one or more trailers attached, or may be transporting a mobile home (not to be confused with Code 11, Motorhome).

Code 07 applies to standard school buses as well as vans used to transport students.

Code 08 is used for city, transit, and other types of buses. For articulated (flexible) buses, enter the number of trailing flexible sections in the Number of Trailers field.

Code 09 is used for motorcycles and dirt bikes. If a sidecar and/or other trailing object is attached to the motorcycle, enter the appropriate value in the Number of Trailers field.

Code 10 is used for all other types of road vehicles.

VEHICLE TYPE

(continued)

Code 13 is used for ATVs. ATV crashes are only entered into ODOT's Crash Data System when the incident occurs on the traveled portion of a public roadway. Off-road ATV crashes are not entered into the system. License and endorsement requirements are not considered when coding this type of vehicle. (*ATVs were included with motorcycles under Code 09, prior to 2007.*)

Code 14 is used for standing-type scooters, such as Segways.

DEFINITIONS:

Articulated Bus: A flexible bus comprised of two or more rigid sections that are linked by a pivoting joint. Also called "bendy bus", "accordion bus" or "flexi-bus".

Farm Tractor: Motor vehicles designed and used primarily in agricultural operations for drawing or operating other farm machines, equipment and implements of husbandry.

VALIDATIONS:

EMERGENCY USE

Format: 1 char

Code	Description
0	No
1	Yes

INSTRUCTIONS:

Emergency Use is a yes/no field that indicates whether the vehicle was being used as an emergency vehicle at the time of the crash. This code may be applied to any type of vehicle.

Code 0 is used for vehicles that are not being used in an emergency. This includes police, fire, and ambulance vehicles not running with lights or sirens.

Code 1 is used for any vehicles that are being used in an emergency. This includes police, fire, and ambulance vehicles running with lights and / or sirens.

VALIDATIONS:

NUMBER OF TRAILERS

Format: 1 numeric

Code	Description
0	No trailers attached
1	One trailing unit
2	Two trailing units
3	Three or more trailing units
8	Trailing, but number of units unknown
9	Unknown

INSTRUCTIONS:

Number of Trailers is a one-digit code that indicates whether any trailers were attached to a vehicle, and if so, how many.

Code 0 is used when it is known that there are no trailers attached or that no information is given indicating the presence of trailers for this vehicle (use this code as a default).

Code 9 is used when conflicting information exists regarding trailing units for this vehicle.

VALIDATIONS:

VEHICLE MOVEMENT

Format: 1 char

Code	Description
0	Unknown
1	Straight ahead
2	Turning right
3	Turning left
4	Making a U-turn
5	Backing
6	Stopped in traffic
7	Parked - properly
8	Parked - improperly
9	Parking maneuver

INSTRUCTIONS:

Vehicle Movement is a one-digit code that represents the intended movement of the vehicle at the time of the crash.

If **Vehicle Movement** = 6 (Stopped in traffic), then **Vehicle Action** must be one of the following, and must not be 021 (Car ran away – no driver).

- 011 – Stopped in traffic not waiting to make a left turn
- 012 – Stopped because of left turn signal; waiting etc.
- 013 – Stopped while executing a turn
- 022 – Struck, or was struck by, vehicle, pedal-cyclist, or pedestrian in prior collision before crash stabilized
- 023 – Vehicle stalled

*If the **Vehicle Movement** field is coded 7 (Parked – properly), then the **Participant Type** field for **all** injured occupants of that vehicle **must** be coded as 8 (Occupant of a parked motor vehicle).

Coding Priority

If a vehicle is performing more than one of the movements listed below, at the same time, the priority for coding Vehicle Movement is as follows:

1. Parking
2. Backing
3. Turning
4. Stopped

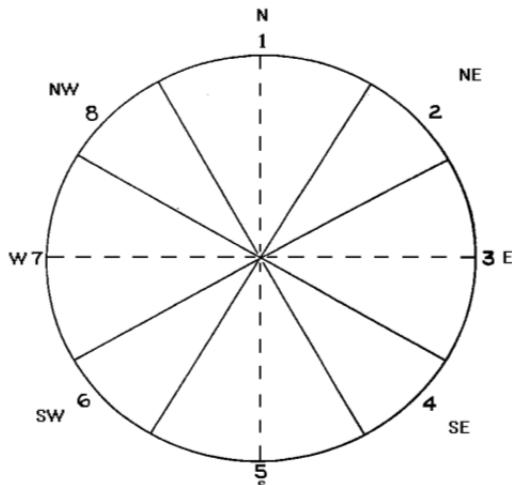

VALIDATIONS:

DIRECTION OF TRAVEL FROM / TO

Format: 1 char, 1 char

Code Description

0	Unknown
1	North
2	Northeast
3	East
4	Southeast
5	South
6	Southwest
7	West
8	Northwest

INSTRUCTIONS:

Direction of Travel is represented by two one-digit fields (From and To). Used together, these fields indicate the vehicle's intended direction of travel. The first field indicates the direction the vehicle came from. The second field indicates the direction in which the vehicle was heading.

Curves do not influence how Direction of Travel is coded.

Inside City Limits

Use the illustration above (consistent with the transparency handout) to assign direction of travel.

*The street numbers and the direction the streets run can be found in the Set-up Books. The "direction of travel" for city streets may be 1 through 8. The directions set up in the street intersection setup books are what should be coded.

If the directions or any other information in the Set-up Book is incorrect, the crash data technician should correct the record using the set-up procedure. Instructions on the set-up procedure will be found in the appendix.

Outside City Limits

When coding crashes that occurred on County Roads, use only codes that represent cardinal directions (N, S, E, W).

At intersections, when one county road runs in a cardinal direction and the other does not, code the non-cardinal road to the opposite cardinal direction. When this is the circumstance on a highway intersection outside city limits, apply the same rule.

At intersections, when both roadways have non-cardinal directions, code them to the nearest cardinal direction.

Multnomah and Washington Counties are the exception to this rule for county roads. For these counties, follow the rule for Direction of Travel Inside City Limits.

VALIDATIONS:

VEHICLE LEVEL ACTION

Format: 3 char

Code	Description
000	No action or non-warranted
001	Skidded
003	Overhanging load struck another vehicle, etc.
006	Slowed down
007*	Avoiding maneuver (successful)
008	Parallel parking or parked
009	Angle parking or parked
011*	Stopped in traffic not waiting to make a left turn
012*	Stopped because of left turn signal or waiting, etc.
013*	Stopped while executing a turn
015	Proceeded after stopping for a stop sign / flashing red
016	Turned on red after stopping
018	Entering street or highway from alley or driveway
019	Entering alley or driveway from street or highway
020	Before entering roadway, struck pedestrian, etc. on sidewalk or shoulder
021	Car ran away – no driver
022	Struck, or was struck by, vehicle or pedestrian involved in prior collision before the crash stabilized
023*	Vehicle stalled
029*	Vehicle crossed, plunged over, or through median barrier
031	Passing situation
032	Vehicle parked beyond curb or shoulder
033*	Vehicle crossed earth or grass median
051	Entering / starting in traffic lane from off-road
052	Merging
088	Other action

INSTRUCTIONS:

Vehicle Action is a three-digit code that reflects the driver's handling of the vehicle prior to the first harmful event, or in the absence of a driver, actions that occurred in relation to this vehicle. This field is not coded based on violations of law or driver error.

If Vehicle Movement is 6 – Stopped in traffic, then Vehicle Action **must** be one of the following:

- 011 – Stopped in traffic not waiting to make a left turn
- 012 – Stopped because of left turn signal; waiting etc.
- 013 – Stopped while executing a turn
- 022 – Struck, or was struck by, vehicle, pedal-cyclist, or pedestrian in prior collision before crash stabilized
- 023 – Vehicle stalled

Use code 007 (Avoiding maneuver) only when the avoidance maneuver was successful.

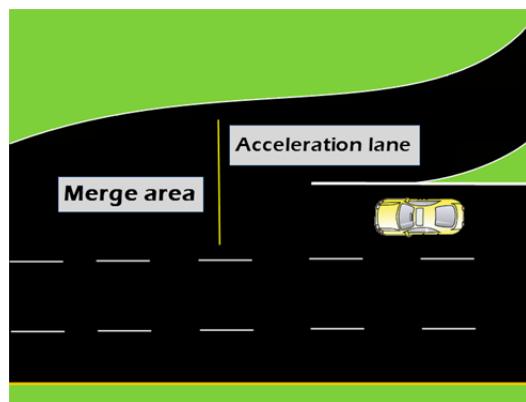

Code 021 (Car ran away – no driver) is used for driverless vehicles that are set in motion. When using this code, **do not** use Vehicle Movement code 6 (Stopped in traffic).

VEHICLE LEVEL ACTION

(continued)

When using Vehicle Level Action Code 029 or 033, check the Digital Video Log (DVL) to verify that the correct median type has been coded.

Example of merge area for Code 052

VALIDATIONS:

VEHICLE LEVEL CAUSE

Format: 2 char, 2 char, 2 char

Code	Description
00	No cause associated at this level
11	Mechanical defect
20	Vehicle improperly parked
21	Defective steering mechanism
22	Inadequate or no brakes
24	Vehicle lost load, load moved or shifted
25	Tire failure
26	Phantom / non-contact vehicle

INSTRUCTIONS:

Cause is a two-digit code that represents the circumstance(s) most responsible for the occurrence of the crash. If applicable, enter the Cause code(s) specific to this vehicle that explain why it was involved in the crash, in the order of predominance.

Up to three Cause codes are allowed at this level.

Enter Code 00 in the first Cause field if no Cause code applies to this vehicle.

VALIDATIONS:

VEHICLE LEVEL EVENT

Format: 3 char, 3 char, 3 char

Code	Description
Blank	Not applicable at this level
004	Pedestrian indirectly involved (not struck)
006	Pedal-cyclist indirectly involved (not struck)
007	Hitchhiker (soliciting a ride)
010	Overturned after first harmful event
011	Vehicle being pushed
012	Vehicle towed or had been towing another vehicle
013	Vehicle forced by impact into other vehicle, cyclist or pedestrian
014	Vehicle set in motion by non-driver (child released brakes, etc.)
017	Train struck vehicle
018	Vehicle struck train
019	Vehicle struck railroad car on roadway
020	Jackknife; trailer or towed vehicle struck towing vehicle
021	Trailer or towed vehicle overturned
022	Trailer connection broke
023	Detached trailing object struck other vehicle, non-motorist, or object (2004)
024	Vehicle door opened into adjacent lane
025	Wheel came off
026	Hood flew up
028	Lost load, load moved or shifted
029	Tire failure
030	Pet: cat, dog and similar
031	Stock: cow, calf, bull, steer, sheep, etc.
032	Horse, mule, or donkey
033	Horse and rider
034	Wild animal, game (includes birds; not deer or elk)
035	Deer or elk, wapiti
036	Animal-drawn vehicle
037	Culvert, open low or high manhole
038	Impact attenuator
039	Parking meter
040	Curb (also narrow sidewalks or bridges)
042	Leading edge of guardrail
043	Guard rail (not metal median barrier)
044	Median barrier (raised or metal)
045	Retaining wall or tunnel wall
046	Bridge railing (on bridge and approach)
047	Bridge abutment (approach ends)
048	Bridge pillar or column (even if struck protective guard rail first)
049	Bridge girder (horizontal bridge structure overhead)
050	Traffic raised island
051	Gore
052	Pole – type unknown
053	Pole – power or telephone
054	Pole – Street light only

VEHICLE LEVEL EVENT

(continued)

- 055 Pole – Traffic signal and ped signal only
- 056 Pole – Sign bridge
- 057 Stop or yield sign
- 058 Other sign, including street signs
- 059 Hydrant
- 060 Delineator or marker (reflector posts)
- 061 Mailbox
- 062 Tree, stump or shrubs
- 063 Tree branch or other vegetation overhead, etc.
- 064 Wire or cable across or over the road
- 065 Temporary sign or barricade in road, etc.
- 066 Permanent sign or barricade in/off road
- 068 Foreign obstruction / debris in road (not gravel)
- 069 Equipment working in/off road
- 070 Other equipment in or off road (including parked trailer, boat)
- 071 Wrecker, street sweeper, snow plow or sanding equipment
- 072 Rock, brick or other solid wall (2004)
- 073 Other bump (not speed bump), pothole or pavement irregularity (Per PAR)**
- 074 Other overhead object (highway sign, signal head, etc.); not bridge**
- 075 Bridge or road cave in
- 076 High water
- 077 Snow bank
- 078 Low or high shoulder at pavement edge**
- 079 Cut slope or ditch embankment
- 080 Struck by rock or other object set in motion by other vehicle, including lost loads
(do not use with code 081)**
- 081 Struck by rock or other moving, falling or flying object (do not use with code 080)**
- 085 Wind gust
- 086 Vehicle immersed in body of water
- 087 Fire or Explosion
- 089 Crash related to another separate crash
- 090 Two-way traffic on divided roadway all routed to one side
- 091 Building, other structure**
- 092 Other (phantom) non-contact vehicle (on report)
- 095 Guy wire
- 096 Berm (earthen or gravel mound)
- 097 Gravel in roadway
- 098 Abrupt edge
- 100 Fixed object, unknown type
- 101 Non-Fixed object, other or unknown type
- 111 Street car / trolley (on rails and / or overhead wire) struck vehicle
- 112 Vehicle struck street car / trolley (on rails or overhead wires)
- 114 Vehicle struck railroad equipment (not train) on tracks.**
- 117 Rail Crossing Drop Arm Gate**
- 118 Expansion joint**
- 119 Jersey Barrier**
- 121 Fence**

VEHICLE LEVEL EVENT

(continued)

- 124 Sliding or swerving due to wet, icy, slippery or loose surface**
- 125 Shoulder gave way
- 126 Rocks / boulder (not gravel; not rock slide)**
- 127 Rock slide or land slide**
- 128 Curve present at crash location**
- 129 Vertical grade, hill present at crash location**

INSTRUCTIONS:

Vehicle Level Event is made up of up to three sets of three-digit codes that indicate events that occurred at the vehicle level of the crash.

Vehicle level event codes generally represent occurrences of injury or damage to a person or property, but may also indicate other circumstances related to the crash.

At the vehicle level, enter the event most relevant to the individual vehicle being coded, preferably in order of occurrence. Vehicle level events may also be applicable at the crash level.

VALIDATIONS:

VEHICLE LEVEL EVENT by CATEGORY

This list groups Event codes by category. Some Events apply to more than one category.

Animal

- 030 Pet: cat, dog and similar
- 031 Stock: cow, calf, bull, steer, sheep, etc.
- 032 Horse, mule, or donkey
- 033 Horse and rider
- 034 Wild animal, game (includes birds; not deer or elk)
- 035 Deer or elk, wapiti
- 036 Animal-drawn vehicle

Avoiding

These codes may be used in conjunction with Vehicle Action code 007 (successful avoidance).

- 004 Pedestrian indirectly involved (not struck)**
- 006 Pedal-cyclist indirectly involved (not struck)**
- 007 Hitchhiker (soliciting a ride)
- 030 Pet: cat, dog and similar
- 031 Stock: cow, calf, bull, steer, sheep, etc.
- 032 Horse, mule, or donkey
- 033 Horse and rider
- 034 Wild animal, game (includes birds; not deer or elk)
- 035 Deer or elk, wapiti
- 036 Animal-drawn vehicle
- 068 Foreign obstruction / debris in road (not gravel)
- 073 Other bump (not speed bump), pothole or pavement irregularity (Per PAR)**
- 092 Other (phantom) non-contact vehicle (on PAR or report)

Distractions

- 004 Pedestrian indirectly involved (not struck)**
- 006 Pedal-cyclist indirectly involved (not struck)**
- 007 Hitchhiker (soliciting a ride)
- 030 Pet: cat, dog and similar
- 031 Stock: cow, calf, bull, steer, sheep, etc.
- 032 Horse, mule, or donkey
- 033 Horse and rider
- 034 Wild animal, game (includes birds; not deer or elk)
- 035 Deer or elk, wapiti
- 092 Other (phantom) non-contact vehicle (on PAR or report)

Fixed Object

- 037 Culvert, open low or high manhole
- 038 Impact attenuator
- 039 Parking meter
- 040 Curb (also narrow sidewalks or bridges)
- 042 Leading edge of guardrail
- 043 Guard rail (not metal median barrier)

VEHICLE LEVEL EVENT by CATEGORY

(continued)

- 044 Median barrier (raised or metal)
- 045 Retaining wall or tunnel wall
- 046 Bridge railing **or parapet** (on bridge or approach)
- 047 Bridge abutment (approach ends)**
- 048 Bridge pillar or column (even if struck protective guard rail first)
- 049 Bridge girder (horizontal bridge structure overhead)**
- 050 Traffic raised island
- 052 Pole – type unknown
- 053 Pole – power or telephone
- 054 Pole – Street light only
- 055 Pole – Traffic signal and/or ped signal only
- 056 Pole – Sign bridge
- 057 Stop or yield sign
- 058 Other sign, including street signs
- 059 Hydrant
- 060 Delineator or marker (reflector posts)
- 061 Mailbox
- 062 Tree, stump or shrubs
- 063 Tree branch or other vegetation overhead, etc.
- 064 Wire or cable across or over the road
- 066 Permanent sign or barricade in/off road
- 072 Rock, brick or other solid wall
- 073 Other bump (not speed bump), pothole or pavement irregularity (Per PAR)**
- 074 Other overhead object (highway sign, signal head, etc.); not bridge**
- 075 Bridge or road cave in
- 077 Snow bank
- 078 Low or high shoulder at pavement edge**
- 079 Cut slope or ditch embankment
- 091 Building, other structure**
- 095 Guy wire
- 096 Berm (earthen or gravel mound)
- 098 Abrupt edge
- 100 Fixed object, unknown type
- 118 Expansion joint**
- 119 Jersey Barrier**
- 120 Wire or cable median barrier
- 121 Fence**
- 126 Rocks / boulder (not gravel; not rock slide)**
- 127 Rock slide or land slide**

Miscellaneous

- 010 Overturned after first harmful event
- 011 Vehicle being pushed
- 012 Vehicle towed or had been towing another vehicle
- 013 Vehicle forced by impact into another vehicle, cyclist or pedestrian
- 051 Gore
- 076 High water

VEHICLE LEVEL EVENT by CATEGORY

(continued)

- 085 Wind gust
- 086 Vehicle immersed in body of water
- 087 Fire or Explosion
- 089 Crash related to another separate crash
- 090 Two-way traffic on divided roadway all routed to one side
- 094 Police report indicates teenage driver of an involved vehicle was in violation of graduated license program (eff. 2000)
- 124 Sliding or swerving due to wet, icy, slippery or loose surface
- 125 Shoulder gave way
- 128 Curve present at crash location**
- 129 Vertical grade, hill present at crash location**

Non Fixed Object

- 065 Temporary sign or barricade in road, etc.
- 068 Foreign obstruction / debris in road (not gravel)
- 069 Equipment working in/off road
- 070 Other equipment in or off road (including parked trailer, boat)
- 080 Struck by rock or other object set in motion by other vehicle, including lost loads**
(do not use with code 081)
- 081 Struck by rock or other moving, falling or flying object** *(do not use with code 080)*
- 097 Gravel in roadway
- 101 Non-Fixed object, other or unknown type

Non-Motorist

- 004 Pedestrian indirectly involved (pedestrian not struck)**
- 006 Pedal-cyclist indirectly involved (Pedal-cyclist not struck)**
- 007 Hitchhiker (soliciting a ride)
- 011 Vehicle being pushed
- 024 Vehicle door opened into adjacent traffic lane
- 036 Animal-drawn vehicle

Occupant

- 014 Vehicle set in motion by non-driver (child released brakes, etc.)

Rail Related

- 017 Train struck vehicle
- 018 Vehicle struck train
- 019 Vehicle struck railroad car on roadway
- 111 Street car or trolley (on rails or overhead wires) struck vehicle
- 112 Vehicle struck street car / trolley (on rails or overhead wires)
- 113 At or on street car or trolley right-of-way
- 114 Vehicle struck railroad equipment on tracks (not train)
- 117 Rail Crossing Drop Arm Gate**

VEHICLE LEVEL EVENT by CATEGORY

(continued)

Vehicle Related

- 010 Overturned after first harmful event
- 011 Vehicle being pushed
- 012 Vehicle towed or had been towing another vehicle
- 013 Vehicle forced by impact into another vehicle, cyclist or pedestrian
- 014 Vehicle set in motion by non-driver (child released brakes, etc.)
- 020 Jackknife: trailer or towed vehicle struck towing vehicle
- 021 Trailer or towed vehicle overturned
- 022 Trailer connection broke
- 023 Detached trailing object struck other vehicle, non-motorist, or object
- 024 Vehicle door opened into adjacent traffic lane
- 025 Wheel came off
- 026 Hood flew up
- 028 Lost load, load moved or shifted
- 029 Tire failure
- 071 Wrecker, street sweeper, snow plow or sanding equipment
- 124 Sliding or swerving due to wet, icy, slippery or loose surface

VEHICLE SPEED FLAG

Format: 1 char

Code	Description
0	No
1	Yes

INSTRUCTIONS:

Vehicle Speed Flag is a yes/no field entered at the vehicle level. This field indicates that this vehicle was **driven in excess of the posted speed**.

Only use information from the police report, or the driver's own admission, in coding this field. Information provided on the PAR such as a citation or warning issued, calculated speed estimates, etc., may be used. DO NOT code this field based on witness statements.

Use Code 0 when this vehicle was **not** being driven in excess of the posted speed. For cases where a driver was traveling too fast for conditions, but was not driving in excess of the posted speed, enter 0 and use Participant Level Error code 047 (Too fast for conditions).

Use Code 1 when the PAR or this vehicle's driver admits he or she was exceeding the posted speed. Also enter Participant Level Error code 050 (Speeding).

VALIDATIONS:

VEHICLE HIT AND RUN

Format: 1 char

Code	Description
0	No
1	Yes

INSTRUCTIONS:

Vehicle Level Hit and Run is a yes/no field that indicates whether the operator fled the scene of the crash in this vehicle.

Use Code 0 if the vehicle remained at the scene, i.e. no "hit and run" occurred. Also use Code 0 if the driver fled the scene but left the vehicle at crash site. In that case, capture the driver's action of hit and run on the Participant Level.

Enter Code 1 if the police report states that the Hit and Run driver left the scene in this vehicle.

The PAR is the only accepted source of information for this field.

VALIDATIONS:

SAFETY EQUIPMENT USE IN VEHICLE

Format: 2 num, 2 num, 2 num

Code Description

EQUIPMENT USED

00-99 Actual number of persons in vehicle who were using safety equipment

EQUIPMENT UNUSED

00-99 Actual number of persons in vehicle who were not using safety equipment, or used equipment improperly.

EQUIPMENT USE UNKNOWN

00-99 Actual number of persons in vehicle for whom safety equipment use is not known.

INSTRUCTIONS:

Safety Equipment Use in Vehicle is made up of three sets of two-digit codes. This field records the **total number of vehicle occupants**, including un-injured passengers **over age 4***, according to whether or not they used safety equipment.

Entries are required for all three fields, for each vehicle coded.

In the first field, enter the total number of vehicle occupants who were using safety equipment (belts, booster seats, helmets, etc.).

In the second field, enter the total number of vehicle occupants who were not using safety equipment, or were using safety equipment improperly.

In the third field, enter the total number of vehicle occupants for whom safety equipment use is unknown.

**This is the only field that records information on un-injured passengers over age four. A participant record is not created for them in the Crash Data System.*

VALIDATIONS:

VEHICLE OCCUPANT COUNT

Format: 2 numeric

Code Description

00-99 Total number of persons in vehicle

INSTRUCTIONS:

Vehicle Occupant Count is a derived field generated by the data entry system. It is calculated by adding the numbers that were entered into the following three fields:

- Safety Equipment Used
- Safety Equipment Un-used
- Safety Equipment Use Unknown

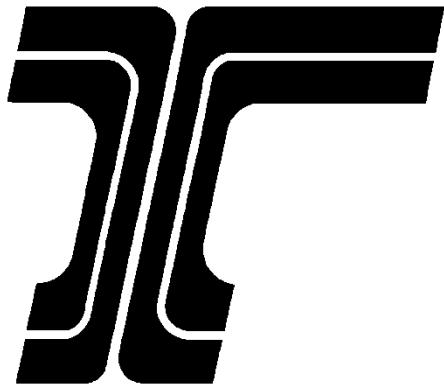

Verify that the total count is correct before proceeding to the next record.

Note that this number may not match the number of Participant records entered for the vehicle because no Participant record is created for un-injured passengers **over** age four.

VALIDATIONS:

Section III

PARTICIPANT LEVEL

PARTICIPANT NUMBER

Format: 2 numeric

Code	Description
01-99	Number assigned to each coded participant by the Date Entry system, in sequential order.

INSTRUCTIONS:

Participant Number is an auto-generated number assigned sequentially for all participants. This number may be edited in order to change the entry order of the participants.

The Crash Data System records Participant Level data for:

- all drivers
- all children ages four and under, and
- all other **injured** participants

Participant records are not created for persons who are not drivers, are not injured, and are over age 04.

When multiple non-motorists (pedestrians, pedal-cyclists, etc.) are involved, create a Participant records only for the injured non-motorist.

Do not create a participant record for uninjured occupants of legally parked vehicles.

VALIDATIONS:

PARTICIPANT LEVEL VEHICLE NUMBER

Format: 2 char

Code	Description
Blank	Injured pedestrian, pedal-cyclist or other non-motorist.
01–99	Number assigned to each occupied vehicle by the Data Entry system, in sequential order.

INSTRUCTIONS:

Participant Level Vehicle Number is a two-digit field. It is a sequential number assigned by the data entry system for each vehicle recorded on the Participant Level. The code is system-generated, but may be changed by the crash data technician to modify the entry order of participant records.

All occupants of a given vehicle are assigned the same vehicle number.

This field is blank for Participant records that represent injured pedestrians, pedal-cyclists and other non-motorists.

Do not enter a participant record for uninjured occupants of legally parked vehicles.

VALIDATIONS:

PARTICIPANT VEHICLE SEQUENCE NUMBER

Format: 2 numeric

Code	Description
01-99	Assigned sequentially for occupants of a given vehicle.

INSTRUCTIONS:

Participant Vehicle Sequence (PVS) Number is a system-generated field. Once generated, it can not be modified. The Data Entry system assigns this number sequentially for all occupants of a given vehicle, beginning with '01' for the driver. Numbering re-starts at '01' for occupants of the next vehicle, and for occupants of each subsequent vehicle.

Non-motorists are also numbered sequentially, beginning with '01'. The PVS Number increases consecutively for each additional non-motorist, even though their records may not occur next to each other in the list of Participant records.

The example below shows how the Vehicle and PVS number would be assigned for a crash involving a vehicle with two occupants, a pedestrian, a second vehicle with one occupant, and a bicyclist.

Vehicle Number	PVS Number	Participant Type	
Code	Code	Code	Description
01	01	1	Driver of Vehicle No. 1
01	02	2	Passenger of Vehicle No. 1
<i>blank</i>	01	3	Pedestrian
02	01	1	Driver of Vehicle No. 2
<i>blank</i>	02	6	Pedal-cyclist

VALIDATIONS:

PARTICIPANT TYPE

Format: 1 char

Code	Description
<i>Motorist codes:</i>	
0	Unknown occupant type in a motor vehicle in transport
1	Driver
2	Passenger
<i>Non-Motorist codes:</i>	
3	Pedestrian
4	Pedestrian using a pedestrian conveyance (wheelchair, skates, etc.)
5	Pedestrian towing an object, other participant, conveyance, etc.
6	Pedal-cyclist
7	Pedal-cyclist towing an object, other participant, conveyance, etc.
8	Occupant of a parked motor vehicle
9	Other type of non-motorist (occupant of a non-motor vehicle, horse-drawn carriage, etc.)

INSTRUCTIONS:

Participant Type is a one-digit code that indicates the participant's role in the crash.

Participants are classified in two different categories: "motorists" and "non-motorists". The American National Standard Institute's manual on classification of motor vehicle traffic accidents defines "motorist" as "any occupant of a motor vehicle in transport", and "non-motorist" as "any person other than a motorist" (see *ANSI D16.1-2007, definitions 2.2.40 and 2.2.41*).

Motor vehicles that are within the travel portion of the roadway are considered to be "in transport" (not parked). Their occupants are "**drivers**" or "**passengers**" and their Participant Type code **must** be 1, 2 or 9. Examples of a "motor vehicle in transport" are:

- ▶ a vehicle driving within its intended lane
- ▶ a driverless motor vehicles in motion on the roadway,
- ▶ a vehicle parked improperly on the travel portion of the road
- ▶ a motionless motor vehicle that is disabled or abandoned on a roadway (See ANSI definition 2.2.34)

Motor vehicles that are fully off the travel portion of the roadway (i.e., on the shoulder, or outside the trafficway boundaries) are not considered to be "in transport". Use Code 8 or 9 for their occupants.

Motorist Codes:

Code 0 is used when it is known that the participant was an occupant of a motor vehicle in transport, but the participant's role (i.e., driver or passenger) is not known.

Code 1 is used for the vehicle operator, i.e. driver. "A driver is an occupant who is in actual physical control of a transport vehicle or, for an out-of-control vehicle, an occupant who was in control until control was lost." (see *ANSI D16.1-2007, definition 2.2.37*) Also use code 1 for operators of vehicles

PARTICIPANT TYPE

(continued)

who are stalled or improperly parked **on the travel portion of the roadway**.

Code 2 is used for occupants of a motor vehicle in transport who are not the driver (see ANSI/D16.1-2007, *definition 2.2.38*). For occupants who are riding on the exterior of the vehicle, or are otherwise attached to the outside of a vehicle, use code 2, and use Participant Level Event code 104.

Code 3 is used for pedestrians (unless they are towing another person or object). Also use code 3 for persons who are carrying, or being carried by, another person. For a pedestrian who is **being towed**, use Participant Type code 3, and Participant Level Event Code 008.

Non-Motorist Codes:

Code 4 is used for a pedestrian who is on a conveyance, such as a wheelchair (including motorized wheelchairs), skates, skateboard, etc. For a participant using a non-motorized wheelchair, enter code 106 in the Participant Level Event field. For a participant using a motorized wheelchair, enter code 107 in the Participant Level Event field.

Code 5 is used for a pedestrian who is in the act of towing another person or object.

Code 6 is used for an occupant of a non-motorized pedal-cycle in transport.

- ▶ For a person riding as a passenger on a pedal-cycle, including a tandem cycle, use code 6, and Participant Level Event code 105.
- ▶ For a person who is **being towed** by a pedal-cyclist, use code 6, and Participant Level Event code 008.

Code 7 is used for a pedal-cyclist who is in the act of towing another person or object.

Code 8 is used for participants who are injured occupants of a motor vehicle that is legally parked, or illegally parked outside the travel portion of the roadway.*

Code 9 is used for all other types of non-motorists, such as a rider on horseback, an occupant of a horse-drawn carriage, or other non-motorized device, etc.

VALIDATIONS:

PARTICIPANT LEVEL HIT AND RUN

Format: 1 char

Code	Description
0	No
1	Yes

INSTRUCTIONS:

Participant Level Hit and Run is a yes/no field that indicates whether or not a participant remained at the scene of the crash. The PAR is the only accepted source of information for this field.

Use code 0 when this participant remained at the scene of the crash.

Use code 1 if the participant left the scene of the crashUse this code if the driver fled on foot, abandoning the vehicle at scene.

VALIDATIONS:

PUBLIC EMPLOYEE

Format: 1 char

Code	Description
0	No
1	Yes

INSTRUCTIONS:

Public Employee is a yes/no field that indicates if a participant was employed by a public agency **and** was on duty at the time of the crash.

For the purposes of this manual, a public employee is any person employed by a city, county, state, or federal agency.

The following types of people are “public employees”.

- Police officers
- Municipal firefighters
- Other government and public school employees (i.e. school bus drivers)
- Government construction workers / flaggers
- Military employees

Use code 0 when the participant is **not** on duty as a public employee.

Use Code 1 when the participant **is** on duty as a public employee.

VALIDATIONS:

SEX

Format: 1 char

Code	Description
------	-------------

1	Male
2	Female
9	Unknown

INSTRUCTIONS:

Sex code is a one-digit code that indicates the participant's gender.

VALIDATIONS:

AGE

Format: 2 char

Code	Description
00	Age is unknown
01	Infants from birth to less than two years of age
02-98	Actual age of participant 2 years or over
99	Ninety-nine years of age or over.

INSTRUCTIONS:

Age is a two-digit code that represents the age of the participant at the time of the crash. The actual age is coded with the following exceptions:

Code 00 is used when the age of the participant is not known.

Code 01 is used when the age of the participant is an infant from birth to less than two years of age.

Code 99 is used when the participant is age 98 or older.

VALIDATIONS:

DRIVER LICENSE STATUS

Format: 1 char

Code	Description
Blank	Participant is not a driver
0	Not licensed
1	Valid Oregon license or permit
2	Valid license, other state or country
3	Suspended / revoked
4	Expired
8	Other non-valid license
9	Unknown if driver was licensed

INSTRUCTIONS:

Driver License Status is a one-digit code that indicates the class of license and the state that issued it.

Code 0 is used when a driver is not licensed, and when a driver is operating farm equipment or an ATV and does not hold a valid Oregon license, certificate, endorsement, or permit. **Drivers age 13 or younger can not have a valid Oregon license.** Oregon may issue a hardship license to drivers as young as age 14, though this is rare. (See Other Permits and Licenses section below.)

Code 1 is used for drivers who have a valid Oregon license, Commercial Driver License (CDL), certificate, endorsement or permit and are operating their vehicle in compliance with their license restrictions. Examples are:

- Operator holding standard vehicle license (Class C)
- Certified operator age 16 or older driving farm equipment
- ATV or motorcycle operator who has a Class C license with an endorsement

Code 8 is used when the driver's license is not valid for any other reason. Examples include:

- ▶ Operating the vehicle in violation of conditions set by DMV, such as driving during hours prohibited by a hardship license;
- ▶ Violating conditions of learner's permit; for example, violation of Graduated Driver License restrictions (also enter 094 for Participant Level Event).
- ▶ Operating a vehicle without corrective lenses, when required
- ▶ Operating a heavy truck with no Commercial Driver's License

Code 9 is used when no information exists regarding the drivers license status, such as for a hit-and-run driver who was never located.

Other Permits and Licenses

1. **Special Instruction Permit:** issued to applicants who have no driving experience and are under 15 years of age.

DRIVER LICENSE STATUS

(continued)

2. **Moped-Restricted Driver License:** issued to moped-only operators age 16 years or older.
3. **30- or 90-Day Temporary Driver Permit:** issued to persons who are otherwise qualified for the driving privilege but need additional time to obtain proof of legal presence or resolve an issue with the Social Security Administration.
4. **Disability Golf Cart Driver Permit:** issued only to persons with ambulatory disabilities per ORS 807.210(1). The cart must be operated in areas with designated speed of 25 mph or less, and is exempt from registration, vehicle equipment, and safety requirements.
5. **Student / Emergency Driver Permit:** issued only to persons age 14 or older.

VALIDATIONS:

RESIDENCE OF DRIVER

Format: 1 char

Code	Description
Blank	Participant is not a driver
1	Oregon resident within 25 miles of home
2	Oregon resident more than 25 miles from home
3	Oregon resident – unknown distance from home
4	Non-resident
9	Unknown if Oregon resident

INSTRUCTIONS:

Residence of Driver is a one-digit code that indicates the proximity of residency to the location of the crash.

See the Mileage Chart on the following page for distances between Portland and other Oregon cities.

VALIDATIONS:

INJURY SEVERITY

Format: 1 char

Code	Description
1	Fatal
2	Incapacitating (Serious\Major)
3	Non-incapacitating (Moderate)
4	Possible injury – complaint of pain (Minor)
5	Died prior to crash
7	No injury – newborn to age 4
9	No injury – participant over age 4

INSTRUCTIONS:

Injury Severity is a one-digit code that represents the extent of bodily harm sustained by a participant, as reported by the driver or investigating officer (except for fatalities – see Code 1, below). Code the more serious injury when a discrepancy exists between a driver report and officer's report.

Code 1 is used for participants who die as a result of injuries sustained in the crash. For the purposes of motor vehicle traffic crash classification, the death must occur within thirty days (24-hour periods) from the time of the crash. The death certificate is the final, official source of record for cause of death, death date and death time, when available.

Code 2 is used for participants who suffer incapacitating injuries. An incapacitating (severe or major) injury is a non-fatal injury which "prevents the injured person from walking, driving or normally continuing the activities the person was capable of performing before the injury occurred". (see to *ANSI D16.1-2007, definition 2.3.4*) Examples of incapacitating injuries include broken bones, severe bleeding, unconsciousness, etc.

Code 3 is used for participants who suffer non-incapacitating (moderate) injuries. A non-incapacitating injury not severe, but is "evident to observers at the scene of the accident in which the injury occurred". (see to *ANSI D16.1-2007, definition 2.3.5*) Examples of non-incapacitating injury include lumps, bruises, abrasions, swelling, minor bleeding, etc.

Code 4 is used for participants who report injury, but no injuries are apparent. Examples of possible/minor injury include momentary lapse of consciousness, complaint of pain, etc.

Code 5 is used for participants who die prior to the crash. Example: a driver suffers a massive heart attack and dies while traveling on a trafficway. The subsequent loss of vehicle control results in injury to his passengers.

Code 7 is used for participant's age newborn to four years, who are not injured.

Code 9 is used for participants (driver, cyclist or pedestrian) over age four who are not injured.

VALIDATIONS:

PARTICIPANT SAFETY EQUIPMENT USE

Format: 1 char

Code	Description
Blank	Not applicable (pedestrians, other types of non-motorists)
0	No safety equipment used
1	Seat belt or harness used improperly
2	Seat belt or harness, fastened
3	Child restraint used improperly
4	Child restraint used properly
5	Helmet used improperly
6	Helmet used properly
8	Equipment used, type unknown
9	Unknown if used

INSTRUCTIONS:

Participant Level Safety Equipment Use is a one-digit code that records the type and use (proper or improper) of safety equipment reported for each participant.

The Police Traffic Crash Report is the source of this information. When the information is not available or is unknown to the officer, the driver's report is the source.

This field applies to pedal-cyclists and injured occupants of parked motor vehicles.

Occupants of parked motor vehicles, whether injured or uninjured, are counted in the **Vehicle Level Safety Equipment Use** fields so that they are counted among the total number of persons involved, for reporting purposes. Because that field is validated against this one (Participant Level Safety Equipment Use), safety equipment use must be coded for injured occupants of parked motor vehicles.

Leave this field blank for pedestrians, and for occupants of most other non-motorized transport devices.

VALIDATIONS:

AIRBAG DEPLOYMENT

Format: 1 char

Code	Description
Blank	Not reported or not applicable
0	Airbag is available on this vehicle but did not deploy
1	Airbag deployed
9	Airbag is available on this vehicle, but information about deployment is not given

INSTRUCTIONS:

Airbag Deployment is a one-digit code that indicates the general availability of airbags in a given vehicle, and whether or not the airbag deployed during the crash.

Information for this field is obtained from the PAR or driver report. This field is not intended to represent or imply further research into the availability of airbags for the subject vehicle.

VALIDATIONS:

NON-MOTORIST MOVEMENT

Format: 1 char

Code	Description
Blank	Participant is a motorist
0	Unknown
1	Straight ahead
2	Turning right
3	Turning left
4	Making a U-Turn
5	Backing
6	Stopped in traffic

INSTRUCTIONS:

Non-Motorist Movement is a one-digit code that indicates the movement of participants who were not in a vehicle (i.e.; pedestrian, pedal-cyclist, etc.).

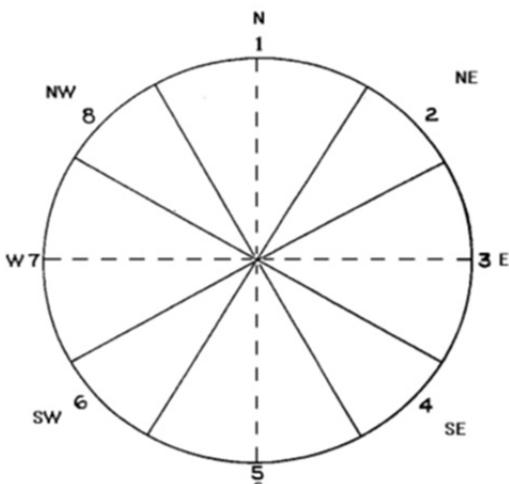

VALIDATIONS:

NON-MOTORIST DIRECTION OF TRAVEL FROM / TO

Format: 1 char, 1 char

INSTRUCTIONS:

Non-Motorist direction of travel field contains two one-digit codes.

The first code indicates the direction from which the participant came.

The second code indicates the intended direction towards which the participant was heading.

VALIDATIONS:

NON-MOTORIST LOCATION

Format: 2 char

Code	Description
Blank	Not applicable (not a non-motorist)
00	At intersection – not in roadway
01	At intersection – inside crosswalk
02	At intersection – in roadway, outside crosswalk
03	At intersection – in roadway, unknown if crosswalk is available
04	Not at intersection – in roadway
05	Not at intersection – on shoulder
06	Not at intersection – on median
07	Not at intersection – beyond shoulder, but within trafficway right-of-way
08	Not at intersection – in bike path or parking lane
09	Not at intersection – on sidewalk
10	Outside trafficway boundaries
13	At Intersection – in bike lane
14	Not at intersection – in bike lane
15	Not at intersection – inside mid-block crosswalk
18	Other – not in roadway
99	Unknown location

INSTRUCTIONS:

Non-Motorist Location is a two-digit code that indicates where the non-motorist (pedestrian, bicyclist, etc.) was located at the time of the crash.

This field was changed from Pedestrian Location to Non-Motorist Location at the start of the 2007 code year.

VALIDATIONS:

PARTICIPANT LEVEL ACTION

Format: 3 char

Code	Description
000	No action or non-warranted
002	Getting on or off stopped vehicle or parked vehicle (code for driver or passenger)
010	Passenger interfering with driver
017	Lost control of vehicle
022	Struck, or was struck by, vehicle or pedestrian in prior collision before crash stabilized
024	Dead by unassociated cause
025	Fatigued, sleepy, asleep
026	Driver blinded by sun
027	Driver blinded by headlights
028	Physically ill
030	Pursuing or attempting to stop a vehicle
034	Crossing at intersection – no traffic signal present
035	Crossing at intersection – traffic signal present
036	Crossing at intersection – diagonally
037	Crossing between intersections
038	Driver's attention distracted
043	Playing
044	Pushing or working on vehicle
045	Working (in or off roadway, not on a vehicle)
046	Non-Motorist walking, running, riding, etc., with traffic
047	Non-Motorist walking, running, riding, etc., facing traffic
050	Standing or lying down
052	Merging
055	Blinded by water spray
088	Other action

INSTRUCTIONS:

Participant Level Actions a three-digit code that describes what the participant was doing, their condition, or other factors affecting the individual at the time of the crash.

An Action code must be entered at this level.

VALIDATIONS:

PARTICIPANT LEVEL ACTION by CATEGORY

This list groups Action codes by category. Some Actions apply to more than one category.

000 No action or non-warranted

Non-Motorist

022 Struck, or was struck by, vehicle or pedestrian in prior collision before crash stabilized
028 Physically ill
030 Pursuing or attempting to stop a vehicle
034 Crossing at intersection – no traffic signal present
035 Crossing at intersection – traffic signal present
036 Crossing at intersection – diagonally
037 Crossing between intersections
043 Playing
044 Pushing or working on vehicle
045 Working (in or off roadway, not on a vehicle)
046 Non-Motorist walking, running, riding, etc., with traffic
047 Non-Motorist walking, running, riding, etc., facing traffic
050 Standing or lying down
052 Merging
055 Blinded by water spray
088 Other action

Occupant

002 Getting on or off stopped vehicle or parked vehicle (code for driver or passenger)
010 Passenger interfering with driver
017 Lost control of vehicle
024 Dead by unassociated cause
025 Fatigued, sleepy, asleep
026 Driver blinded by sun
027 Driver blinded by headlights
028 Physically ill
030 Pursuing or attempting to stop a vehicle
038 Driver's attention distracted
055 Blinded by water spray
088 Other action

ERROR

Format: 3 char, 3 char, 3 char

Code	Description
000	No error
001	Wide turn
002	Cut corner on turn
003	Failed to obey mandatory traffic turn signal, sign or lane markings
004	Left turn in front of oncoming traffic
005	Left turn where prohibited
006	Turned from wrong lane
007	Turned into wrong lane
008	U-turned illegally
009	Improperly stopped in traffic lane
010	Improper signal or failure to signal
011	Backing improperly (not parking)
012	Improperly parked
013	Improper start leaving parked position
014	Improper start from stopped position
015	Improper or no lights (vehicle in traffic)
016	Inattention
017	Driving unsafe vehicle (no other error apparent)
018	Entering, exiting parked position with insufficient clearance or other improper parking maneuver
019	Disregarded other driver's signal
020	Disregarded traffic signal
021	Disregarded stop sign or flashing red
022	Disregarded warning sign, flares or flashing amber
023	Disregarded police officer or flagman
024	Disregarded siren or warning of emergency vehicle
025	Disregarded Rail Road signal, Rail Road sign, or Rail Road flagman
026	Failed to avoid stopped or parked vehicle ahead other than school bus
027	Did not have right-of-way over pedal-cyclist
028	Did not have right-of-way
029	Failed to yield right-of-way to pedestrian
030	Passing on a curve
031	Passing on the wrong side
032	Passing on straight road under unsafe conditions
033	Passed vehicle stopped at crosswalk for pedestrian
034	Passing at intersection
035	Passing on crest of hill
036	Passing in "No Passing" zone
037	Passing in front of oncoming traffic
038	Cutting in (two lanes - two way only)
039	Driving on wrong side of the road (used for two-way, undivided roadways)
040	Driving through safety zone or over island
041	Failed to stop for school bus
042	Failed to decrease speed for slower moving vehicle
043	Following too closely (per PAR or driver admission)
044	Straddling or driving on wrong lanes

ERROR

(continued)

- 045 Improper change of traffic lanes
- 046 Wrong way on one-way roadway (Also when roadway has a solid or earth median and vehicle is traveling on wrong side)
- 047 Driving too fast for conditions (not exceeding posted speed)
- 048 Opened door into adjacent traffic lane
- 049 Impeding traffic
- 050 Driving in excess of posted speed
- 051 Reckless driving (cited per PAR or driver admission)
- 052 Careless driving (cited per PAR)
- 053 Speed Racing (cited per PAR)
- 054 Crossing at intersection – no traffic signal present
- 055 Crossing at intersection – traffic signal present
- 056 Crossing at intersection – diagonally
- 057 Crossing between intersections
- 059 Walking, running, etc., on shoulder with traffic
- 060 Walking, running, etc., on shoulder facing traffic
- 061 Walking, running, etc., on pavement with traffic
- 062 Walking, running, riding, etc., on pavement facing traffic
- 063 Playing in street or road
- 064 Pushing or working on vehicle in road or on shoulder
- 065 Working in roadway or along shoulder (not on vehicle)
- 070 Standing or lying in roadway
- 071 Improper use of traffic lane by non-motorist**
- 073 Eluding / Attempting to Elude**
- 079 Failed to negotiate a curve**
- 080 Failed to maintain lane
- 081 Ran off road
- 082 Driver misjudged clearance (used only for signs, structures, etc. Not for parked vehicle.)
- 083 Over correcting / over-steering
- 085 Overloading or improper loading of vehicle with cargo or passengers
- 097 Unable to determine which driver disregarded traffic control device

INSTRUCTIONS:

Error is a three-digit code that provides a more specific and complete record of what occurred during the crash. Error codes may be applied to motorcycles, mopeds, and pedal-cyclists since they are operated under the same rules of the road as motor vehicles. Some Error codes are specific to non-motorists.

Up to three errors may be coded.

VALIDATIONS:

ERROR by CATEGORY

Format: 3 char, 3 char, 3 char

Code	Description
------	-------------

000 No error

Turning

- 001 Wide turn
- 002 Cut corner on turn
- 003 Failed to obey mandatory traffic turn signal, sign or lane markings
- 004 Left turn in front of oncoming traffic
- 005 Left turn where prohibited
- 006 Turned from wrong lane
- 007 Turned into wrong lan
- 008 U-turned illegally

Improper Maneuvers

- 009 Improperly stopped in traffic lane
- 010 Improper signal or failure to signal
- 011 Backing improperly (not parking)
- 012 Improperly parked
- 013 Improper start leaving parked position
- 014 Improper start from stopped position
- 015 Improper or no lights (vehicle in traffic)
- 016 Inattention
- 017 Driving unsafe vehicle (no other error apparent)
- 018 Entering, exiting parked position with insufficient clearance or other improper parking maneuver

Disregarding Maneuvers

- 019 Disregarded other driver's signal
- 020 Disregarded traffic signal
- 021 Disregarded stop sign or flashing red
- 022 Disregarded warning sign, flares or flashing amber
- 023 Disregarded police officer or flagman
- 024 Disregarded siren or warning of emergency vehicle
- 025 Disregarded Rail Road signal, Rail Road sign, or Rail Road flagman
- 026 Failed to avoid stopped or parked vehicle ahead other than school bus

Right-of-Way Errors

- 027 Did not have right-of-way over pedal-cyclist
- 028 Did not have right-of-way
- 029 Failed to yield right-of-way to pedestrian

ERROR by CATEGORY

(continued)

Passing Maneuvers

- 030 Passing on a curve
- 031 Passing on the wrong side
- 032 Passing on straight road under unsafe conditions
- 033 Passed vehicle stopped at crosswalk for pedestrian
- 034 Passing at intersection
- 035 Passing on crest of hill
- 036 Passing in "No Passing" zone
- 037 Passing in front of oncoming traffic
- 038 Cutting in (two lanes - two way only)

Miscellaneous Maneuvers

- 039 **Driving on wrong side of the road (used for two-way, undivided roadways)**
- 040 Driving through safety zone or over island
- 041 Failed to stop for school bus
- 042 Failed to decrease speed for slower moving vehicle
- 043 Following too closely (per PAR or driver admission)
- 044 Straddling or driving on wrong lanes
- 045 Improper change of traffic lanes
- 046 Wrong way on one-way roadway (Also when roadway has a solid or earth median and vehicle is traveling on wrong side)
- 048 Opened door into adjacent traffic lane

Basic Rule Errors

- 047 Driving too fast for conditions (not exceeding posted speed)
- 049 Impeding traffic
- 050 Driving in excess of posted speed

Violations

- 051 Reckless driving (cited per PAR or driver admission)
- 052 Careless driving (cited per PAR)
- 053 Speed Racing (cited per PAR)

Non-Motorist Errors

- 054 Crossing at intersection – no traffic signal present
- 055 Crossing at intersection – traffic signal present
- 056 Crossing at intersection – diagonally
- 057 Crossing between intersections
- 059 Walking, running, etc., on shoulder with traffic
- 060 Walking, running, etc., on shoulder facing traffic
- 061 Walking, running, etc., on pavement with traffic
- 062 Walking, running, riding, etc., on pavement facing traffic

ERROR by CATEGORY

(continued)

- 063 Playing in street or road
- 064 Pushing or working on vehicle in road or on shoulder
- 065 Working in roadway or along shoulder (not on vehicle)
- 070 Standing or lying in roadway
- 071 Improper use of traffic lane by non-motorist**

Other

- 073 Eluding / Attempt to Elude**
- 079 Failed to negotiate a curve**
- 080 Failed to maintain lane
- 081 Ran off road
- 082 Driver misjudged clearance (used only for signs, structures, etc. Not for parked vehicle.)
- 083 Over correcting / over-steering
- 085 Overloading or improper loading of vehicle with cargo or passengers
- 097 Unable to determine which driver disregarded traffic control device

PARTICIPANT LEVEL CAUSE

Format: 2 char, 2 char, 2 char

Code	Description
00	None applicable at this level
01	Speed too fast for conditions
02	Did not yield right-of-way
03	Passed stop sign or flashing red
04	Disregarded traffic signal
05	Drove left of center on two-way road
06	Improper overtaking
07	Followed too closely
08	Made improper turn
10	Other improper driving
12	Other (not improper driving)
13	Improper change of traffic lanes
14	Disregarded other traffic control device
15	Wrong way on one-way roadway (Also when roadway has a solid or earth median and vehicle is traveling on wrong side)
17	Physical Illness
16	Driver drowsy / fatigued / sleepy
18	Non-Motorist illegally in roadway
19	Non-Motorist clothing not visible
26*	Phantom / Non-contact vehicle
27	Inattention
28	Non-Motorist Inattention
29	Failed to avoid vehicle ahead
30	Driving in excess of posted speed
31	Speed Racing (Per PAR)
32	Careless Driving (Per PAR)
33	Reckless Driving (Per PAR)
34	Aggressive Driving (Per PAR)
40	View obscured
50	Improper use of median or shoulder

INSTRUCTIONS:

Cause is a two-digit code that represents the circumstance(s) most responsible for the occurrence of the crash. Enter the codes that represent circumstances specific to this participant that contributed to, or resulted in, the occurrence of the crash.

Up to three Participant Cause codes are allowed. Participant Cause codes may also apply at the Crash Level.

Use code 00 if no cause code applies to this participant.

Use code 01 with discretion, for speed too fast for conditions. Speed may be “involved” and yet not be a contributing factor of the crash. Use this code when there are clear indications that violating the basic rule was a contributing factor.

PARTICIPANT LEVEL CAUSE

(continued)

Use code 05 when the vehicle is straddling the center line or driving on wrong side of an undivided two way road.

Use code 10 when a driver error was a factor in the crash, but no other cause code applies.

Use code 12 when improper driving was NOT a factor in the crash, and no other cause code applies. Examples include: deer jumps out in front of vehicle, leaving driver no time to react, illness, passenger interfered with driver and mechanical defect. This code should only be used when no other cause is applicable to the crash.

Use code 15 when the vehicle is traveling on the wrong side of a divided roadway or traveling the wrong direction on a one way road.

Use code 26 when the participant was affected by a non-contact or phantom vehicle (a vehicle indirectly involved in the crash).

Code 34 is used only when the PAR states that the crash involved aggressive driving. It must not be used based solely on witness statements.

Do not use code 34 without approval from the Code Team Leader.

Aggressive Driving vs. Road Rage:

Aggressive driving differs from road rage, which falls under Deliberate Intent. Road rage incidents are excluded from the Crash Data System, although unintentionally crashes that occur due to related road rage incidents are coded at the Crash Level.

Aggressive driving is a progression of unlawful driving actions that creates a hazardous situation. The driver's intention is generally to "beat" traffic or express dissatisfaction with the traffic environment; not to use the vehicle as a weapon. (USDOT, National Highway Traffic Safety Administration, retrieved from

http://www.nhtsa.dot.gov/people/injury/aggressive/Aggressive%20Web/sse_1.html

For example:

- Cutting other vehicles off in a lane, or deliberately preventing someone from merging *but not intending to collide with other vehicle*

Aggressive driving is a traffic offense; whereas Road Rage is a criminal offense.

Road rage is defined as "an assault with a motor vehicle or other dangerous weapon by the operator or passenger(s) of another motor vehicle, or an assault precipitated by an incident that occurred on a roadway." (USDOT, National Highway Traffic Safety Administration, retrieved from http://www.nhtsa.dot.gov/people/injury/aggressive/Aggressive%20Web/sse_1.html)

In order for an incident to be defined as **road rage**, there must be "**willful and wanton disregard for the safety of others.**" In other words, road rage means that someone deliberately tried to harm you as a result of something that happened while you were driving your car.

PARTICIPANT LEVEL CAUSE

(continued)

Examples of Crashes with Cause Coded as “Road Rage” (must be on PAR):

1. A driver flashing lights and/or sounding the horn excessively, causing distraction to another driver, resulting in that other driver colliding with a vehicle or fixed object.
2. A motorist fleeing from vehicle driven by an angry spouse crashes unintentionally into a third vehicle.

Example of Road Rage Crashes. Do not enter these crashes into the Crash Data System

1. Driver or passenger throwing projectiles from a moving vehicle with the intent of damaging other vehicles, pedestrians or pedal-cyclists
2. Passenger or driver shooting at vehicles, pedestrians or pedal-cyclists
3. Intentionally causing a collision between vehicles
4. Exiting the car intending to start confrontations, including striking other vehicles with an object
5. Deliberately running other vehicle off the roadway
6. Deliberately striking a vehicle, pedestrian, pedal-cycle or object

VALIDATIONS:

PARTICIPANT LEVEL CAUSE by CATEGORY

This list groups Cause codes by category. Some Cause codes apply to more than one category.

Behavior

- 02 Did not yield right-of-way
- 03 Passed stop sign or red flasher
- 04 Disregarded traffic signal**
- 05 Drove left of center on two-way road
- 06 Improper overtaking
- 07 Followed too closely
- 08 Made improper turn
- 10 Other improper driving
- 13 Improper change of traffic lanes)
- 14 Disregarded other traffic control device
- 15 Wrong way on one-way roadway (Also when roadway has a solid or earth median and vehicle is traveling on wrong side)**
- 16 Driver drowsy / fatigued / sleepy
- 17 Physical Illness**
- 18 Non-Motorist illegally in roadway
- 19 Non-Motorist clothing not visible
- 27 Inattention
- 28 Non-Motorist Inattention**
- 29 Failed to avoid vehicle ahead**
- 31 Speed Racing (Per PAR or self-reported)
- 32 Careless Driving (Per PAR or self-reported)
- 33 Reckless Driving (Per PAR or self-reported)
- 34 Aggressive Driving (Per PAR or self-reported)*
- 50 Improper use of median or shoulder**

*Do not use code 34 without approval from the Code Team Leader.

Miscellaneous

- 00 None applicable at this level
- 10 Other improper driving
- 12 Other (not improper driving)
- 26 Phantom / non-contact vehicle
- 40 View obscured**

Speed

- 01 Speed too fast for conditions (not exceeding limit)
- 30 Driving in excess of posted speed
- 31 Speed Racing (Per PAR or self-reported)

PARTICIPANT LEVEL EVENT

Format: 3 char, 3 char, 3 char

Code	Description
Blank	Non applicable at this level
001	Occupant fell, jumped or was ejected from moving vehicle
002	Passenger interfered with driver
003	Animal or insect in vehicle interfered with driver
005	"Sub-Ped": pedestrian injured subsequent to collision, etc. (applicable to Pedestrian only)
007	Hitchhiker (soliciting a ride)
008	Passenger or non-motorist being towed or pushed on conveyance
009	Actively getting on or off stopped or parked vehicle (must have physical contact with vehicle)
080	Struck by rock or other object set in motion by other vehicle, including lost loads <i>(Do not use with code 081)</i>
081	Struck by rock or other moving, falling or flying object <i>(Do not use with code 080)</i>
082	Vehicle obscured view
083	Vegetation obscured view
084	View obscured by fence, sign, phone booth, etc.
092	Other (phantom) non-contact vehicle (on PAR or report).
093	Cell phone (on PAR or report submitted by driver using phone)
094	Police report indicates teenage driver of this vehicle was in violation of graduated license program
099	Cell phone use witnessed by other participant
102	Texting
103	Work Zone Worker
104	Passenger riding on vehicle exterior
105	Passenger riding on pedalcycle
106	Pedestrian in non-motorized wheelchair
107	Pedestrian in motorized wheelchair
108	Law Enforcement / Police Officer
109	"Sub-Bike": pedal-cyclist injured subsequent to collision, etc.
110	Non-motorist struck vehicle.
115	Distracted by navigation system or GPS device
116	Distracted by other electronic device
123	Loose object in vehicle struck occupant
130	View obscured by curve
131	View obscured by vertical grade, hill
132	View obscured by vehicle window conditions
133	View obscured by water spray

INSTRUCTIONS:

Participant Level Event is made up of up to three separate three-digit code that represents events associated at the participant level.

At the participant level, enter the event most relevant to the individual being coded, preferably in order of occurrence. Participant level events may also be applicable at the crash level.

Event Code 005 -Sub-Ped **must** be coded to the Pedestrian; **not** to the Driver or Vehicle.

PARTICIPANT LEVEL EVENT

(continued)

When Event Code 094 is used, **Drivers License Status** must be coded '8' - Other non-valid license. (includes Graduated Drivers License violations).

VALIDATIONS:

PARTICIPANT LEVEL EVENT by CATEGORY

This list groups Event codes by category. Some Event codes apply to more than one category..

Animal

- 003 Animal or insect in vehicle interfered with driver

Avoiding

These codes may be used in conjunction with Vehicle Action code 007 (successful avoidance).

- 007 Hitchhiker (soliciting a ride)
092 Other (phantom) non-contact vehicle (on PAR or report)

Distractions

- 002 Passenger interfered with driver
003 Animal or insect in vehicle interfered with driver
007 Hitchhiker (soliciting a ride)
092 Other (phantom) non-contact vehicle (on PAR or report)
093 Cell phone (on PAR or report submitted by driver using phone)
099 Cell phone use witnessed by other participant
102 Texting
115 Distracted by navigation system or GPS device
116 Distracted by other electronic device)

Miscellaneous

- 094 Police report indicates teenage driver of this vehicle was in violation of graduated license program (2000)

Non Fixed Object

- 080 Struck by rock or other object set in motion by other vehicle, including lost loads** (*do not use with code 081*)
081 Struck by rock or other moving, falling or flying object (*do not use with code 080*)

Non-Motorist

- 005 "Sub-Ped": pedestrian injured subsequent to collision, etc.
007 Hitchhiker (soliciting a ride)
103 Work Zone Worker
105 Passenger riding on pedalcycle
106 Pedestrian in non-motorized wheelchair
107 Pedestrian in motorized wheelchair
108 Law Enforcement / Police Officer
109 "Sub-Bike": pedal-cyclist injured subsequent to collision, etc.
110 Non-motorist struck vehicle

Occupant

- 001 Occupant fell, jumped, or was ejected from moving vehicle

PARTICIPANT LEVEL EVENT by CATEGORY

(continued)

- 002 Passenger interfered with driver
- 008 Passenger being towed or pushed on conveyance
- 009 Actively getting on or off stopped or parked vehicle (has physical contact with vehicle)
- 014 Vehicle set in motion by non-driver (child released brakes, etc.)
- 094 Police report indicates teenage driver of this vehicle was in violation of graduated license program
- 104 Passenger riding on vehicle exterior
- 108 Law Enforcement / Police Officer**
- 109 "Sub-Bike": pedal-cyclist injured subsequent to collision, etc.**
- 123 Loose object in vehicle struck occupant

View Obscured

- 082 Vehicle obscured view
- 083 Vegetation obscured view
- 084 View obscured by fence, sign, phone booth, etc.
- 130 View obscured by curve**
- 131 View obscured by vertical grade, hill**
- 132 View obscured by vehicle window conditions**
- 133 View obscured by water spray**

BLOOD ALCOHOL CONTENT (BAC) TEST RESULTS

Format: 2 char

Code	Description
Blank	Not available
00-79	Actual BAC test result, in hundredths (<u>enter the leading zero for values lower than .10</u>)
80	.80 or greater
84	Suspect sample
85	Test refused
86	No test administered
87	Test administered, results unknown

INSTRUCTIONS:

BAC Test Results is a two-digit code that represents an actual Blood Alcohol Content test result, other converted test result, or other information regarding the availability of a BAC test result. The only acceptable sources for this information are the police report (from the reverse side of the face sheet, or from the narrative, including statements about hospital findings), crime lab reports, and medical examiner toxicology reports.

Code this field for **all participant records**, regardless of injury severity.

Leave this field blank when no BAC testing information is available for this participant.

BAC test results represent **hundredths** of a percent. Do not enter the decimal point. It is assumed.

Do not round the BAC test result. If test results show three digits to the right of the decimal, enter the first 2 digits only. *This instruction represents a change from coding practice prior to 2003.*

Enter **both digits** to the right of the decimal point. For BAC's **lower than .10, the leading zero must be entered**. If the leading zero is not entered, the coded BAC will be displayed as a single digit (i.e. '1' instead of '01'), which is **ten times higher than the actual test result**.

- ▶ For BAC results of .01 through .09, enter 01, 02, 03, 04, 05, 06, 07, 08, or 09
- ▶ Very high BAC results (.35 and over) are rare. Cases involving high BACs must be reviewed by the Code Team Leader.

Code 80 is used when the BAC is .80 or above, and no official statement is available to indicate that the sample was contaminated or suspect.

Code 86 is used when the police report indicates that no test was given, and no other official record is received to indicate otherwise (i.e. a crime lab or medical examiner toxicology report).

Code 87 is used when the police report indicates that a test was administered, but results are not available.

Code 84 is used when an official report is received that indicates the BAC sample tested was contaminated or "suspect".

BLOOD ALCOHOL CONTENT (BAC) TEST RESULTS

(continued)

Code 85 is used when the police report indicates that the subject refused to submit to testing.

VALIDATIONS:

ALCOHOL USE REPORTED

Format: 1 char

Code	Description
Blank	Not reported; no information provided regarding alcohol use by this participant
0	Police report that participant had not been drinking
1	Police report that participant had been drinking; or suspect admits it
9	Police report that it is unknown if participant had been drinking; or conflicting info exists on driver reports

INSTRUCTIONS:

Code this field for all participants, regardless of participant type or injury severity.

Alcohol Use Reported is a one-digit code that represents a participant's use of alcohol as indicated by police. A participant's admission of his own alcohol use is also considered reliable information for coding this field "yes" (code '1'). Statements made by other drivers or witnesses, about someone other than themselves, are not considered reliable information for this field.

For non-fatal cases, if a police report is not available, use whatever reliable information exists to code this field.

This field is coded independently of tests results received through other sources other than the PAR. *Medical Examiner test results have no bearing on the coding of the "Alcohol Use Reported" field, unless it is clear that the officer used those test results to make his determination.* (This instruction is contrary to what is allowed for coding the "Drug Use Reported" field.)

For example, an officer may note in the report that he suspected a driver had been drinking, but test results received separately from the police report are negative for alcohol. The officer's initial observation takes precedence in this instance. (Several hours may pass between the time an officer makes a determination of alcohol-involvement at the scene, and the time the suspect is testing, potentially resulting in a BAC result of .00. In such a case, enter '1' in the Alcohol Use Reported field, and '00' in the BAC Test Results field.)

Leave this field blank when there is no information regarding alcohol use for this participant.

Code 0 is used when the police report positively states that this participant had not been drinking. Do not use driver statements for this code.

Code 1 is used when the officer indicates that this participant had been drinking, or when the participant admits to having been drinking. Common indicators for officers are:

- observations made at the scene
- officer states odor of alcohol
- preliminary breath tests
- field sobriety tests
- BAC test results noted in the report narrative
- conclusion stated in narrative

ALCOHOL USE REPORTED

(continued)

Code 9 is used when the officer states that it is unknown whether this participant had been drinking, or conflicting information exists in the drivers' reports. The officer's report takes precedence when using this code.

VALIDATIONS:

DRUG USE REPORTED

Format: 1 char

Code	Description
Blank	Not reported
0	Participant had not been using drugs
1	Participant had been using drugs (reported by police, test results, or suspect admits it)
9	Unknown if participant had been using drugs (as reported by police; no tests available)

INSTRUCTIONS:

Code this field for all participants, regardless of injury severity.

Drug Use Reported is a one-digit code that represents drug use by the participant, as reported by an officer, by the participant's own statement, by crime lab results, or by Medical Examiner toxicology reports.

Leave this field blank when no information exists to indicate drug use for this participant. This instruction represents a change from coding practice prior to 2003.

Code 0 is used when the police report specifically states that this participant had not been using drugs, and/or test results are negative for drugs.

Code 1 is used when the officer indicates that this participant had been using drugs, when the participant admits to having been using drugs, or test results are positive for drugs. Common indicators by officers are:

- observations made at the scene
- field testing
- test results noted in the police report

Code 9 is used when the police report indicates that it is unknown whether or not this participant had been using drugs, and no test results are received to indicate otherwise.

VALIDATIONS:

This page intentionally left blank

Section IV

SYSTEM-GENERATED FIELDS

CRASH ID

Format:

Code	Description
9999999	Sequential number automatically generated by the Data Entry System

INSTRUCTIONS:

Crash ID is the unique identifier assigned to every crash by the Crash Data System, without regard to DMV Serial Number, County, or Year. It is not visible on the Data Entry Screen, because the system generates the ID number when the crash case is saved.

The CRASH_ID field is the primary key field for the CRASH table, and one of several primary key fields in VHCL, PARTIC and other CDS data tables and extracts.

JURISDICTION GROUP

Format: 1 char

Code	Description
1	National Forest
2	State Forest
3	National Park
4	State Park
5	Bureau of Land Management
6	Indian Reservation
7	Other Federal Jurisdiction
8	Other Type Jurisdiction (non-federal land)
9	Unknown Jurisdiction

INSTRUCTIONS:

Jurisdiction Group is a one-digit system-generated code that indicates the category of agency having jurisdiction over the area in which the crash occurred. The system-generated code is based on the value entered into the Special Jurisdiction field. A ten-character, alphabetic "short description" will be automatically generated in the data entry screen.

This field is only populated for crashes that occur on special jurisdiction roadways. For all other crashes, this field will remain blank.

ALCOHOL INVOLVED FLAG

Format: 1 char

Code	Description
0	No
1	Yes

INSTRUCTIONS:

Alcohol-Involved Flag is a system-generated code indicating whether an active participant in the crash had been using alcohol. The data entry system populates this field based on the values coded to the Participant Level BAC Test Results and Alcohol Use Reported fields.

An "active participant" is a person who was in a position of control during the crash, such as a driver, pedestrian or pedal-cyclist.

Code 0 is generated when no active participants were reported to have been drinking, and no positive BAC test result was received for any active participant.

Code 1 is generated when at least one active participant was reported to have been drinking, or a positive BAC test result (.01 or higher) was received for any active participant.

Note: Prior to 2003, BAC test result information was collected for fatally injured participants only. Non-fatally injured participants were flagged as to whether or not they had been drinking, but actual BAC values were not reported. As of 2003, the Crash Data System includes BAC test results on all participants for whom the information is received. The increase in alcohol-involvement figures for 2003 and later years represents, at least in part, an improvement in data collection and reporting, rather than an actual increase in alcohol-involved traffic crashes.

DRUG INVOLVED FLAG

Format: 1 char

Code	Description
0	No
1	Yes

INSTRUCTIONS:

Drug-Involved is a system-generated code indicating whether an active participant in the crash was reported to have used drugs. The data entry system populates this field based on the Participant Level Drug Use Reported field.

An “active participant” is a person who was in a position of control during the crash, such as a driver, pedestrian or pedal-cyclist.

Code 0 is generated when no active participants were reported to have used drugs.

Code 1 is generated when at least one active participant was reported to have used drugs.

Note: Prior to 2003, drug-involvement was summarized along with alcohol data, and was not broken out separately in the Crash Data System. As of 2003, the Crash Data System reports drug involvement for all participants for whom the information is received.

SPEED INVOLVED FLAG

Format: 1 char

Code	Description
0	No
1	Yes

INSTRUCTIONS:

Speed-Involved Flag exists on the Crash Level as a system-generated value. This field indicates whether or not a driver involved in the crash was exceeding the posted speed or driving too fast for conditions.

The data entry system populates this field based on values coded in the Vehicle Speed Flag, the Participant Error field, and the Crash or Participant Cause fields.

HIT AND RUN FLAG

Format: 1 char

Code	Description
0	No
1	Yes

INSTRUCTIONS:

Hit and Run is a system-generated code indicating that a participant fled the scene of the crash, on foot or in a vehicle. It is populated according to the values coded in the Vehicle and Participant Level Hit and Run fields.

POPULATION RANGE

Format: 1 char

Code	Description
0	1 to 500
1	501 to 1,000
2	1,001 to 2,500
3	2,501 to 5,000
4	5,001 to 10,000
5	10,001 to 25,000
6	25,001 to 50,000
7	50,001 to 100,000
8	100,001 to 200,000
9	Over 200,000

INSTRUCTIONS:

Population Range is a system-generated code that represents the estimated number of persons living in the incorporated area in which the crash occurred. This field is only populated for crashes that occur in incorporated cities.

The population range codes assigned annually to incorporated cities are based on annual estimates published by Portland State University.

VALIDATIONS:

ROAD CONTROL

Format: 1 char

Code	Description
1	Portland city street
2	Portland highway system
3	Urban city street outside of Portland
4	Urban highway system outside of Portland city limits
5	Rural highway system
6	Rural county road
7	Rural city street
8	Sub-urban highway system
9	Sub-urban road

INSTRUCTIONS:

Road Control is a system-generated code that identifies the governmental jurisdiction over the road on which the crash occurred. Urban areas are based on Federal Aid Urban Transportation Boundaries (FAUB), which is typically updated every 10 years at the time of the national census..

Code 1 is generated for crashes on city streets inside Portland city limits.

Code 2 is generated for crashes on state highways located inside Portland city limits.

Code 3 is generated for crashes on city streets that are inside city limits (other than Portland) and FAUB. Both conditions must be met.

Code 4 is generated for crashes on state highways located inside city limits (other than Portland) and FAUB. Both conditions must be met.

Code 5 is generated for crashes on state highways located outside FAUB.

Code 6 is generated for crashes on streets under county jurisdiction that are outside city limits and outside FAUB. Both conditions must be met.

Code 7 is generated for crashes on streets that are inside incorporated city limits but outside FAUB.

Code 8 is generated for crashes on state highways located outside city limits but inside FAUB.

Code 9 is generated for crashes on county roads that are outside city limits but inside FAUB.

VALIDATIONS:

ROUTE TYPE / ROUTE NUMBER

Format: 2 char, 5 char

Code	Description
IS xxx	Interstate route, followed by the number on the shield
OR xxx	Oregon route, followed by the number on the shield
US xxx	US route, followed by the number on the shield

INSTRUCTIONS:

Route Number is a system-generated value representing the route type (IS, OR, or US) and posted shield number for the state highway on which the crash occurred.

This field is populated according to values contained in TransInfo, and is only applicable for crashes that occur on the state highway system.

VALIDATIONS:

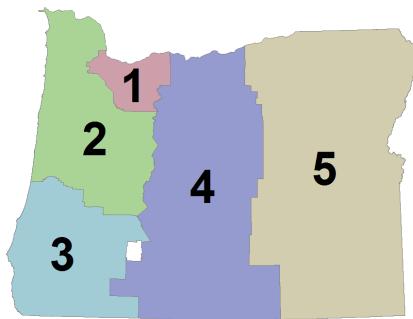

ODOT REGION

Format: 1 char

Code	Description
1	Region 1 – Portland /Metro; Clackamas and Hood River Counties
2	Region 2 – Willamette Valley and Coast
3	Region 3 – Southwestern Oregon
4	Region 4 – Central Oregon
5	Region 5 – Eastern Oregon

INSTRUCTIONS:

The Oregon Department of Transportation divides its highway operations into five geographical regions. Each region is responsible for developing and managing the construction of highway projects, plus the maintenance of state, federal, and interstate highways within its boundaries.

Region maps can be found at:

http://www.oregon.gov/ODOT/TD/TDATA/pages/gis/odotmaps.aspx#ODOT_District_Maps

Region 1 includes the Eastern portion of Washington County, Multnomah County, Clackamas County and most of Hood River County.

Region 2 includes Clatsop County, Columbia County, Tillamook County, the Western portion of Washington County, Yamhill County, Polk County, Marion County, Lincoln County, Benton County, Linn County, and Lane County

Region 3 includes Coos County, Douglas County, Curry County, Josephine County, most of Jackson County and a small portion of Klamath County.

Region 4 includes a small portion of Hood River County, Wasco County, Sherman County, Gilliam County, Jefferson County, Wheeler County, Crook County, Deschutes County, a small portion of Jackson County, most of Klamath County, and Lake County.

Region 5 includes Morrow County, Umatilla County, Union County, Wallowa County, Grant County, Baker County, Harney County, and Malheur County.

Data for this field is available for year 2007 and later.

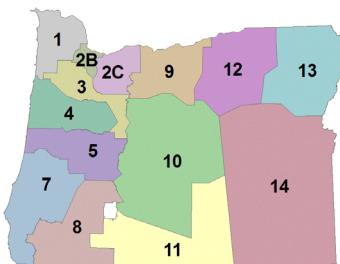

ODOT DISTRICT

Format: 3 char

Code	Description
01	District 1
02B	District 2B
02C	District 2C
03	District 3
04	District 4
05	District 5
07	District 7
08	District 8
09	District 9
10	District 10
11	District 11
12	District 12
13	District 13
14	District 14

INSTRUCTIONS:

There are 14 ODOT Maintenance Districts across the state. Each District is responsible for the day to day maintenance and operation of the state highways in their geographic area.

District maps can be found at:

http://www.oregon.gov/ODOT/TD/TDATA/pages/gis/odotmaps.aspx#ODOT_District_Maps

District 1 includes all or portions of Clatsop County, Columbia County, Tillamook County and the Western portion of Washington County.

District 2B includes all or portions of Washington County, Multnomah County and a portion of Clackamas County.

District 2C includes all or portions of Multnomah County, Hood River County and Clackamas County.

District 3 includes all or portions of Yamhill County, Polk County, Marion County, Linn County and Lane County

District 4 includes all or portions of Tillamook County, Polk County, Lincoln County, Benton County and Linn County.

ODOT DISTRICT

(continued)

District 5 includes all or portions of Linn County, Lane County, and Klamath County

District 7 includes all or portions of Douglas County, Coos County, and Curry County.

District 8 includes all or portions of Douglas County, Josephine County, Jackson County, and Klamath County.

District 9 includes all or portions of Wasco County, Sherman County, Gilliam County, Morrow County, and Wheeler County.

District 10 includes all or portions of Jefferson County, Wheeler County, Deschutes County, Crook County, Harney County, Klamath County and Lake County.

District 11 includes portions of Jackson County, Klamath County, Lake County, and Harney County.

District 12 includes all or portions of Morrow County, Umatilla County, Union County, Gilliam County, Wheeler County, and Grant County.

District 13 includes all or portions of Umatilla County, Wallowa County, Union County, Grant County, and Baker County.

District 14 includes all or portions of Grant County, Baker County, Harney County, and Malheur County.

Data for this field is available for year 2007 and later.

UNLOCATABLE FLAG

Format: 1 char

Code	Description
0	No
1	Yes

INSTRUCTIONS:

The Unlocatable Flag identifies crashes that cannot be assigned a specific location. The flag is used when the crash report didn't provide enough information to specify the actual crash location.

The process used to set the Unlocatable Flag loads default spatial coordinates in the Latitude and Longitude fields. These default coordinates represent a point **off the road network but still within the local jurisdiction** of the crash location.

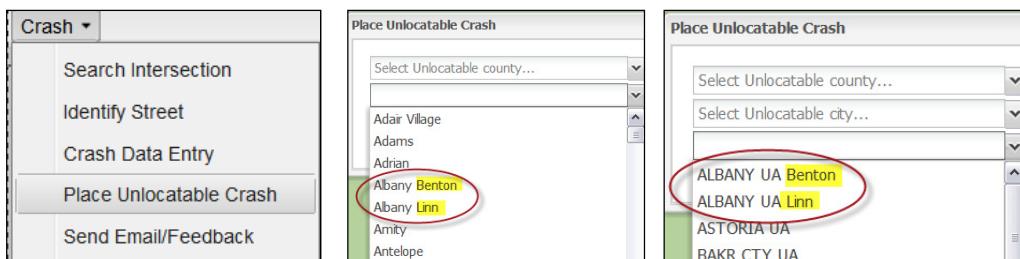

Set the Unlocatable Flag when coding:

- a crash that occurred on a state highway or mile-pointed county road at an unknown milepoint (MP = 999.99),
- a crash on a city street or non-milepointed county road where the nearest intersecting street is unknown,
- a crash on a city street or non-milepointed county road where the distance and/or direction from the nearest intersecting street is unknown

How to Set the Unlocatable Flag

Open the Crash Locator Tool (CLT), click the “Crash” drop-down menu, and select the “Place Unlocatable Crash” option. This will open a dialog box. Click the drop-down menu that best reflects the jurisdiction of the crash location.

Note: Some cities & urban areas cross over county lines. Be sure to select the city or urban area option that matches the county in which the crash occurred.

- ▶ If the crash occurred **inside city limits**, click the drop-down menu for “Unlocatable City”, then select the desired city or Portland City Section.
- ▶ If the crash occurred **outside city limits but still inside** the Federal Aid Urban Boundary (FAUB), click the drop-down menu for “Unlocatable Urban Area”, then select the desired UA.

UNLOCATABLE FLAG

(continued)

- ▶ If the crash occurred **outside city limits and outside** a FAUB, click the drop-down menu for “**Unlocatable County**”, then select the desired county.
- ▶ Click OK, then click the “**Import/Close**” button at the top left corner of the CLT. The word “Yes” will be loaded into the Unlocatable Flag field in the CDS data entry screen.

Code ‘0’ (shown as “No” in the CDS data entry screen) is loaded by the CLT when the crash point has been snapped to a specific location.

Code ‘1’ (shown as “Yes” in the CDS data entry screen) is loaded by the CLT when the crash was snapped to the default coordinate for the appropriate jurisdiction.

Data for this field is available for year 2007 and later.

SEGMENT MARKER ID

Format: 30 varchar

Code	Description
------	-------------

varies	A unique road segment identifier
--------	----------------------------------

INSTRUCTIONS:

Segment Marker ID is a unique identifier assigned to an individual road segment in OR-Trans and is used to relate a crash to that segment. It is used in conjunction with Segment Point LRS Measure in GIS applications to enforce the co-incidence of a crash point and its specific location on a road segment line, in order to maintain the crash point at that location when linework is adjusted for correction or improvement.

The value for this field is automatically loaded into the Crash Data Entry Screen from the Crash Locator Tool (CLT) when the CLT is used to import crash location data.

Data for this field is available for year 2007 and later.

SEGMENT POINT LRS MEASURE

Format: float

Code	Description
varies	The measure in feet of a highway or road in relation to the beginning of the road

INSTRUCTIONS:

Segment Point LRS Measure* is a measure, expressed in feet, along an individual road segment that specifies the location of a crash on the segment. It is used in conjunction with Segment Marker ID in GIS applications to enforce the co-incidence of a crash point and the specific location on a road segment line, in order to maintain the crash point at that location in case linework is adjusted at a future date.

The values for this field are calculated and supplied by a GIS analyst, and uploaded to the Crash table via a batch process.

Data for this field is available for year 2007 and later.

CRASH LEVEL SUMMARY FIELDS

Format: integer, not null

Code Description

xxx Total occurrences in a given crash

INSTRUCTIONS:

The following fields are populated automatically based on the codes, vehicle records, and participant records entered for a given crash. Values are computed and stored after the Crash Data Technician presses the “Save/Validate” button on the Data Entry screen.

The fields are computed and stored in the CRASH table to simplify querying and enhance the response time during reporting.

Total Vehicle Count (TOT_VHCL_CNT):

The number of vehicles involved in this crash, excluding phantom or other non-contact vehicles. This derived field is calculated based on the number of vehicle records entered for this crash.

Total Fatality Count (TOT_FATAL_CNT):

The number of **people killed** as a result of this crash. This derived field is calculated based on the number of participant records with a Participant Injury Severity value of 1.

Total Serious/Major Injury (Inj-A) Count (TOT_INJ_LVL_A_CNT):

The number of people who were seriously injured (but not killed) in this crash. This derived field is calculated based on the number of participant records with a Participant Injury Severity value of 2.

Total Moderate Injury (Inj-B) Count (TOT_INJ_LVL_B_CNT):

The number of people who were moderately injured in this crash. This derived field is calculated based on the number of participant records with a Participant Injury Severity value of 3.

Total Minor Injury (Inj-C) Count (TOT_INJ_LVL_C_CNT):

The number of people who received minor injuries in this crash. This derived field is calculated based on the number of participant records with a Participant Injury Severity value of 4..

Total Non-Fatal Injury Count (TOT_INJ_CNT):

The number of people who were injured in the crash (not fatally). This derived field is calculated based on the number of participant records with a Participant Injury Severity value of 2 (Serious Injury), 3. (Moderate Injury), or 4 (Minor/Possible Injury).

Total Count of Un-Injured Children Age 00-04 (TOT_UNINJD AGE00-04_CNT):

The number of children, newborn to age 4, who were involved in the crash but were not injured. This derived field is calculated based on the number of participant records where Age is between 01 and 04 and Injury Severity = 7.

Total Un-Injured Persons Count (TOT_UNINJD_PER_CNT):

The number of all persons involved in the crash who were not injured. This derived field is calculated based on the

CRASH LEVEL SUMMARY FIELDS

(continued)

total number of persons involved (TOT_PER_INVLV_CNT) minus the number of persons injured (TOT_INJ_CNT) and killed (TOT_FATAL_CNT).

Total Pedestrian Count (TOT_PED_CNT):

The number of pedestrians involved in this crash. This derived field is calculated based on the number of participant records where Participant Type is 3, 4 or 5.

Total Pedestrian Fatality Count (TOT_PED_FATAL_CNT):

The number of pedestrians killed as a result of this crash. This derived field is calculated based on the number of pedestrians (Participant Type = 3, 4 or 5.) in the crash that had a Participant Injury Severity value of 1 (Fatality).

Total Pedestrian Non-Fatal Injury Count (TOT_PED_INJ_CNT):

The number of pedestrians who were non-fatally injured in this crash. This derived field is calculated based on the number of pedestrians (Participant Type = 3, 4 or 5.) in the crash that had a Participant Injury Severity value of 2 (Major Injury), 3 (Intermediate Injury), or 4 (Minor Injury).

Total Pedal-cyclist Count (TOT_PEDCYCL_CNT):

The number of participants in a crash that were pedal-cyclists. This derived field is calculated based on the number of participants in the crash that have a Participant Type of 6 or 7.

Total Pedal-cyclist Fatality Count (TOT_PEDCYCL_FATAL_CNT):

The number of pedalcyclists killed as a result of the crash.

Total Pedal-cyclist Non-Fatal Injury Count (TOT_PEDCYCL_INJ_CNT)

The number of persons with a Participant Type = 6 or 7 (Pedal-cyclist) that were injured in this crash. This derived field is calculated based on the number of Pedal-cyclists (Participant Type = 6 or 7) in the crash that had a Participant Injury Severity value of 2 (Major Injury), 3 (Intermediate Injury), or 4 (Minor Injury).

Total Unknown Non-Motorist Count (TOT_UNKNWN_CNT):

The number of participants in a crash that were an unknown type of non-motorist. This derived field is calculated based on the number of participants in the crash that have a Participant Type of 9.

Total Unknown Non-Motorist Fatality Count (TOT_UNKNWN_FATAL_CNT):

The number of other or unknown non-motorist fatalities that occurred in this crash. This derived field is calculated based on the number of participant records where (Participant Type = 9) in the crash that had a Participant Injury Severity value of 1 (Fatality).

Total Unknown Non-Motorist Injury Count (TOT_UNKNWN_INJ_CNT):

The number of persons with a Participant Type = 9 (unknown non-motorist) that were injured in this crash. This derived field is calculated based on the number of Unknown Non-motorists (Participant Type = 9) in the crash that had a Participant Injury Severity value of 2 (Major Injury), 3 (Intermediate Injury), or 4 (Minor Injury).

Total Vehicle Occupant Count (TOT_OCCUP_CNT):

The number of vehicle occupants involved in the crash. This derived value is computed based on the sum of the Vehicle Level "Occupant Count" field for all vehicles in this crash. (That value is, in turn,

CRASH LEVEL SUMMARY FIELDS

(continued)

derived from the sum of the vehicle occupants that were using / were not using / or have an unknown use of safety equipment.)

Note: It is assumed that this summary value will include, at the minimum, all the Participants that have a Participant Type Code of 0, 1, or 2. However, since uninjured passengers over the age of 4 are not captured at the Participant level, we can not merely sum the participant information to get the total number of vehicle occupants. Instead, we must rely on the values that the coder entered at the vehicle level, indicating how many total occupants were / were not using safety equipment, or for which the use of safety equipment is unknown. Those values are intended to capture information for all occupants, whether or not they were coded at the participant level.

Total Count of Persons Involved (TOT_PER_INVLV_CNT):

The number of persons involved in the crash, including un-injured persons for whom no "participant" record is created. This derived value is computed based on the sum of the Total Pedestrian Count + Total Pedalcyclist Count + Total Unknown Count + Total Occupant Count.

Total Persons Using Safety Equipment (TOT_SFTY_EQUIP_USED_QTY):

The number of participants in a crash that were using available safety equipment at the time of the crash. This derived field is calculated based on two items:

- The sum of the "Vehicle Safety Equipment Used Qty" on all vehicles that are coded in this crash, plus
- The number of Pedalcyclists (Participant Type Code = 6) where the value of the Safety Equipment Use Code = 6, indicating that the Pedalcyclist properly used a helmet at the time of the crash.

Other safety equipment usage by Pedalcyclists, or safety equipment usage by Pedestrians (such as helmet usage by pedestrians using a skateboard) is not counted since that usage is not mandated by legislation.

Note: It is assumed that the "Vehicle Safety Equipment Used Quantity" will include, at the minimum, all the Participants that have a Participant Type Code of 0, 1, or 2 that were correctly using available safety equipment. However, since uninjured passengers over the age of 4 are not captured at the Participant level, we can not merely sum the participant information to get the total number of vehicle occupants using safety equipment. Instead, we must rely on the values that the Coder entered at the vehicle level. That value is intended to capture information for all vehicle occupants, whether or not they were coded at the participant level.

Total Persons Not Using Safety Equipment (TOT_SFTY_EQUIP_UNUSED_QTY):

The number of participants in a crash for whom safety equipment was available at the time of the crash, but it was not used.

This derived field is calculated based on two items:

CRASH LEVEL SUMMARY FIELDS

(continued)

→ The sum of the "Vehicle Safety Equipment Unused Qty" on all vehicles that are coded in this crash, plus

The number of Pedalcyclists (Participant Type Code = 6) where the value of the Safety Equipment Use Code = 5, indicating that the Pedalcyclist either did not use a helmet, or used one improperly at the time of the crash.

The lack of other safety equipment usage by Pedalcyclists, or safety equipment usage by Pedestrians (such as helmets not being used by pedestrians using a skateboard) is not counted since that usage is not mandated by legislation.

Note: it is assumed that the "Vehicle Safety Equipment Unused Quantity" will include, at the minimum, all the Participants that have a Participant Type Code of 0, 1, or 2 that were not using or were incorrectly using available safety equipment. However, since uninjured passengers over the age of 4 are not captured at the Participant level, we can not merely sum the participant information to get the total number of vehicle occupants that were not using safety equipment. Instead, we must rely on the values that the coder entered at the vehicle level. That value is intended to capture information for all vehicle occupants, whether or not they were coded at the participant level.

Total Persons Safety Equipment "Use Unknown" (TOT_SFTY_EQUIP_USE_UNKNWN_QTY): This element contains the total number of participants in a crash where it is not known (or not reported) if safety equipment was used.

This derived field is calculated based on two items:

- The sum of the "Vehicle Safety Equipment Use Unknown Qty" on all vehicles that are coded in this crash, plus
- The number of Pedalcyclists (Participant Type Code = 6) where the value of the Safety Equipment Use Code = 9, indicating that it is unknown whether or not the Pedalcyclist used a helmet at the time of the crash.

Other unknown safety equipment usage by Pedalcyclists, or unknown safety equipment usage by Pedestrians (such as helmet usage by pedestrians using a skateboard) is not counted since that usage is not mandated by legislation.

Note: it is assumed that the "Vehicle Safety Equipment Use Unknown Quantity" will include, at the minimum, all the Participants that have a Participant Type Code of 0, 1, or 2 for which the usage of safety equipment is unknown. However, since uninjured passengers over the age of 4 are not captured at the Participant level, we can not merely sum the participant information to get the total number of vehicle occupants with unknown safety equipment usage. Instead, we must rely on the values that the Coder entered at the vehicle level. That value is intended to capture information for all vehicle occupants, whether or not they were coded at the participant level.

CODER INITIALS

Format: 2 char

Code	Description
------	-------------

xx	Initials
----	----------

INSTRUCTIONS:

Coder Initials indicates the first and last initials of the crash data technician who coded the crash. This field is used for record keeping and metrics reports. It is excluded from data extracts and external reports.

CODED DATE

Format: 8 numeric

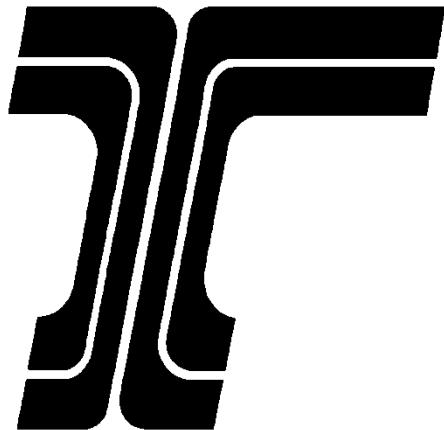

Code	Description
mm/dd/yyyy	Month/day/four-digit year

INSTRUCTIONS:

Coded Date is a system-generated field that indicates the calendar date the crash case was entered into the electronic data entry system.

Section V

APPENDIX

GLOSSARY

A selection of terms that appear in this publication are listed below, with the definitions in use by the Crash Analysis and Reporting (CAR) Unit data technicians. The CAR Unit makes no assertion that these definitions are officially recognized or are to be relied upon as standard definitions for persons or entities outside this unit. For information on national standards for motor vehicle traffic crash classification, please refer to the American National Standard Institute's (ANSI) D16.1-2007 Manual on Classification of Motor Vehicle Traffic Accidents.

Active Participant – A crash participant who has some level of control in the occurrence of the crash, i.e., a driver, pedestrian, pedal-cyclist, or other non-motorist who is not a passenger on a conveyance or being towed.

Add Direction –The term "add-mileage" generally applies when milepoints have increasing values in the direction of travel. The Pacific Highway 1, Interstate 5, is the only exception in that the add-mileage is accumulated in the direction of decreasing milepoints.

Aggressive Driving – a progression of unlawful driving actions that creates a hazardous situation. The driver's intention is generally to "beat" traffic or express dissatisfaction with the traffic environment; not to use the vehicle as a weapon. (USDOT, National Highway Traffic Safety Administration, retrieved from http://www.safercar.gov/people/injury/aggressive/Aggressive%20Web/sse_1.html)

Angle Collision – An angle collision results when a vehicles collide while traveling on crossing paths. An angle collision involves one vehicle ON a roadway (i.e. North to south) and another vehicle From another roadway, open access or driveway. (i.e. East to West). In other words, a cross-movement on one street must be attempted by a vehicle traveling on the intersecting street in order for the type to be classed as angle.

Arterials –provide mobility, typically carrying high traffic volumes on a continuous network with no stub routes but provide very little direct land access. A stub route is when a roadway classification stops midway through the road. Arterials must connect from roadway to roadway.

At-intersection crash – An at-intersection crash in a traffic crash in which the first harmful event occurs within the limits of an intersection (see *ANSI D16.1-2007, definition 2.7.3*).

Backing Collision – A backing collision results when a vehicle is backing in a traffic lane and strikes another vehicle also in a traffic lane. This type will not include backing during a parking maneuver.

Channelization – A method or several methods or devices in which traffic is deliberately directed or diverted to another roadway or lane.

Collectors provide both mobility and land access gathering trips from localized areas and feed them onto the arterial network.

Connection a street or road, open to vehicular travel, which joins a road from the state highway system to any other road, entity, or to another state-owned road. A connection is usually much shorter than a spur or frontage road.

GLOSSARY

(continued)

Couplet is the two roadways of a divided highway, often named differently, approximately parallel with traffic flow in opposite directions and separated by accessible land uses. Examples of couplets include:

- Marion Street bridge and Center Street Bridge on Hwy 030 in Salem
- Liberty Rd and Commercial Street on Hwy 072 in Salem
- Vista Ridge Tunnels of Sunset Hwy on Hwy 047 in the Portland area. (Sunset Hwy couplet carries only one name.).

Divided Highway – A two-way highway with the directions separated by more than 4 feet. (This includes most of the Interstate System.)

Fatal Crash is any motor vehicle or other road vehicle crash that results in fatal injuries to one or more persons.

FAUB – (Federal-Aid Urban Boundary) the line that divides Urban Area from Rural Area.

Fixed Object or Other Object Collision – A fixed or other object collision results when one vehicle strikes a fixed or other object on the roadway or off roadway. An event code should be coded describing what was hit.

Frontage road is a road, secondary to and generally parallel to a highway, providing service to abutting property and adjacent areas for control of access. A frontage road may or may not be connected to the highway it services.

Gore – A gore is the area inside the triangular space that divides a ramp exit or entrance from the mainline roadway. Its purpose is to provide recovery room for a vehicle and it will also be where one would find an impact attenuating device.

Head-On Collision – The head-on type of collision results when the drivers of two vehicles traveling in opposite directions on parallel paths attempt to occupy the same position at the same time and find their forward movement impeded. It is not necessary for the vehicles to collide head-on; that is, for each to be struck perpendicularly to the front of the car. It is the alteration of the intended path of travel that defines the type of collision. To conform with the definition, any attempted maneuver to avoid the collision is inconsequential to the complete crash.

Impact attenuator – You may see a plastic barrel filled with water referred to as a “water bumper” as an attenuation device. They are what is now referred to as “crash cushions”. Their intent is to divert and decelerate impacts of vehicles from striking more rigid objects, to reduce the crash severity of hitting other objects. Hence a kind of “crash cushion”. They are meant to prevent heavy impacts with guardrail ends or concrete median ends which do not move and cause much more severe damage to a vehicle.

Incorporated City is one that has been approved by an election, held in accordance with Statute (ORS Chapter 221).

GLOSSARY

(continued)

Jiggle bar – This refers to a raised generally painted channelization barrier. i.e., (raised //////////////) in the roadway that is intended to distinctly separate traffic without the construction of a solid traffic island or solid median barrier. They appear as a series or group of painted bumps placed in a line or v-formation, separating roadways hence channelizing traffic onto or away from another roadway.

Locals provide land access. Local roads are lower volume roadways that provide direct land access but are not designed to serve through traffic needs focusing on land access and relatively short trips and include all other public roads.

Mainline The mainline portion of the highway refers to all roadways for a highway, excluding connections, frontage roads, and couplets. (This is a slight variation to the way mainline is defined by ODOT terms and definitions, for the purposes of coding for the Crash Analysis and Reporting Unit (CAR)).

Miscellaneous Collisions– Miscellaneous collisions include all animal crashes except animals drawing vehicles, and all crashes Not classifiable under the above types. Typical crashes included – hitting a wild or domestic animal, lost load, or drive shaft fell from vehicle.

Motor Vehicle in Transport – per ANSI D16.1-2007, definition 2.2.34 (**revised**): When applied to motor vehicles, “in transport” means **on a roadway or in motion within or outside the trafficway**. This includes driverless motor vehicles that are in motion, motionless motor vehicles that are within the travel portion of the roadway, disabled vehicles on a roadway, and others.

Non-Collision – A non-collision crash is one in which only one vehicle is involved and is not classifiable as another collision; i.e. rollover, etc.

Non-Fatal Injury Crash is a motor vehicle crash that results in any injury, not resulting in death, to one or more persons.

Overlapping Mileage – A new overlapping length of roadway on an already existing milepointed section of road. This occurs when a road must be lengthened, other than at the end , and additional mileage has been added.

Parking Maneuver Collision – A parking maneuver collision results when a vehicle in the act of entering or leaving a parked position is involved in a collision. A parking maneuver continues until the vehicle has completely cleared the parked position and is moving in the traffic lane. The reverse is true for a vehicle entering a parked position.

Pedestrian Collision – A pedestrian collision results when the first harmful event is any impact between a motor vehicle in traffic and a pedestrian. Does not include any crash where a pedestrian is injured after the initial vehicle impact. In this case, the first harmful event would be the collision type (i.e. rear-end collision) with the pedestrian being coded as a supplemental event to the crash.

Per PAR – When this phrase is used, it means that the officer is stating his or her opinion and not just documenting a witness statement.

GLOSSARY

(continued)

Posted Speed – The maximum speed that you may travel on the road. It begins where a black on white speed sign is posted and ends where a different black on white speed sign is posted.

Property Damage Only Collision – Any motor vehicle crash in which there is no injury to any person, but only damage to a motor vehicle or other road vehicle or to other property, including injury to domestic animals.

Rear-End Collision – A rear end collision results when a vehicle traveling in the same direction or parallel on the same path as another vehicle, collides with the rear end or a second vehicle. In this type, the direction of travel was parallel but continuous.

Regular Mileage – The majority of the highway system is coded as regular mileage. This means that the roadway is “normal”.

Reverse Direction (non-add) – The opposite of add mileage. The direction of travel in which mileposts decrease. The Pacific Highway 1, Interstate 5, is the only exception in that the non-add mileage is accumulated in the direction of increasing milepoints.

Road Rage is defined as “an assault with a motor vehicle or other dangerous weapon by the operator or passenger(s) of another motor vehicle or an assault precipitated by an incident that occurred on a roadway.” Road rage requires willful and wanton disregard for the safety of others. (USDOT, National Highway Traffic Safety Administration, retrieved from http://www.nhtsa.dot.gov/people/injury/aggressive/Aggressive%20Web/sse_1.html)

Roadway is that part of a trafficway designed, improved, and ordinarily used for vehicular travel. The crash data technician considers the boundary lines to be the lateral limits of the traffic lanes. Thus, parking lanes and shoulders are NOT part of the roadway. Also, a parking lane ceases to exist and is considered a traffic lane when parking along a street is prohibited continuously, or during hours the parking lane is required to be clear for traffic.

Rural Major Collectors link county seats and communities not served by arterials but have an intra-county rather than statewide focus.

Rural Minor Arterials also focus on mobility but typically link smaller cities and towns and other statewide traffic generators, such as resorts that are not served by principal arterials.

Rural Minor Collectors collect traffic from local roads and smaller communities.

Rural Principal Arterials focus on statewide and interstate mobility and typically include the Interstate System and other rural freeways that serve longer distance high-volume corridors.

Sideswipe-Meeting Collision – A side swipe meeting collision results when vehicles traveling in opposite directions on parallel paths collide. The side of at least one of the vehicles must be involved.

Sideswipe-Overtaking Collision – A side swipe overtaking collision results when vehicles traveling in the same direction on parallel paths collide. The side of at least one of the vehicles must be involved.

GLOSSARY

(continued)

Split roadways are alignments (lanes) that run parallel to regular add on non-add alignments on a state highway, which are part of the same highway, but are separated by a physical divider. This roadway type is limited and the identifying code distinguishing this roadway from others will be gradually phased out of use by the Roadway Inventory and Classification Unit Services (RICS).

"Split roadways" were terminated in the Trans-Info highway inventory as of 01/01/2010.

Spur Mileage – A spur is an off shoot of the “normal” highway alignment. It may be a two-way or one-way roadway. An example of a spur is Grants Pass Parkway in the City of Grants Pass. This spur runs eastbound off the “normal” route for OR 99, Highway 25.

State Highway - A land-based public way designated by the Oregon Transportation Commission as a highway for the purpose of vehicular travel. The State of Oregon commonly has, but may not have all, right, title, interest, jurisdiction, maintenance and control of the entire area with the highway right-of-way.

Temporary Mileage – A highway route that is a temporary alignment at the time. These alignments will be identified in the highway references and they have no distinguishing difference from a “normal” route other than their expected length of service.

Transinfo -

Turning Leg (configuration recognized in crash coding) is a travel lane for channelizing traffic at right-angles most commonly found at an intersection. (Not to be mistaken for a right turn lane.) A common form of turning leg is noted by a triangular shaped island, raised curb, or painted, that separates right-turning traffic from through traffic at an intersection.

Turning Movement Collision – A turning movement collision results when one or more vehicles in the act of a turning maneuver is involved in a collision with another vehicle.

Two-way Highway – Both directions of travel on the same roadway are separated by 4 feet or less.

Urban Collectors focus on mobility and land access by serving both intra-urban and local trips that take travelers to arterials.

Urban Minor Arterials focus on mobility but serve shorter trips between traffic generators within urban areas.

Urban Principal Arterials focus on mobility by serving trips through urban areas and long distance trips between traffic generators within an urban area.

DELIBERATE INTENT

Do not code crashes that result from deliberate intent, when injury or damage is not greater than what was intended.

According to the ANSI D16.1-2007 *Manual on Classification of Motor Vehicle Traffic Accidents*, definition 2.4.2., deliberate intent is “the classification given to the cause of an event which occurs when a person acts deliberately to cause the event or deliberately refrains from prudent acts which would prevent occurrence of the event.”

Inclusions:

- ▶ Suicide
- ▶ Self-inflicted injury
- ▶ Homicide
- ▶ Injury or damage purposely inflicted
- ▶ And others

Exclusions:

- ▶ Injury or damage beyond that which was intended
- ▶ And others

Examples of Deliberate Intent:

1. When a driver intentionally kills or injures himself with a motor vehicle, by driving it against a fixed object or into a body of water.
2. When a driver intentionally kills or injures another person with a motor vehicle, by running into a pedestrian.
3. When a driver intentionally causes damage with a motor vehicle, by ramming another vehicle.

When to code crashes involving Deliberate Intent:

If an intentional act to cause injury or damage results in injury or damage beyond that reasonably expected from the act, the unexpected injury or damage is not the result of deliberate intent. Therefore, the resulting crash should be coded.

Examples of injury or damage beyond what was intended:

1. A driver intentionally drives his vehicle over the side of a bridge, plunging to the highway below and lands on another vehicle. Do not code the first incident, but do code the collateral crash involving the second vehicle.
2. A driver tries to deliberately run another vehicle off the road, and loses control of his own vehicle, crashing into the ditch.

LEGAL INTERVENTION

According to the ANSI D16.1-2007 *Manual on Classification of Motor Vehicle Traffic Accidents*, definition 2.4.3., legal intervention is “a category of deliberate intent in which the person who acts or refrains from acting is a law-enforcing agent or other official”.

Examples:

1. If a lawbreaker crashes either intentionally or unintentionally into a road block set up by police to stop him, the crash is considered a result of legal intervention. If a driver other than the lawbreaker crashes into the road block, the crash is not considered to be a result of legal intervention.
2. If a police car is intentionally driven into another vehicle, the crash is considered to result from legal intervention. If a lawbreaker being pursued by the police loses control of his vehicle and crashes, the crash is not considered to result from legal intervention unless the police intended that the lawbreaker crash.
3. If during the course of the pursuit, the police vehicle strikes a road vehicle other than the subject of the pursuit, a non-motorist, or property, then that harmful event is not legal intervention.

When to code crashes involving Legal Intervention:

- ▶ A driver other than a lawbreaker unintentionally crashes into a roadblock.
- ▶ A lawbreaker, while eluding the police, loses control of his vehicle and crashes into another vehicle.
- ▶ A police car skids and crashes while chasing a lawbreaker.
- ▶ And others

UNSTABILIZED SITUATION

According to the ANSI D16.1-2007 Manual on Classification of Motor Vehicle Traffic Accidents, definition 2.4.4., an unstabilized situation is “a set of events not under human control. It originates when control is lost and terminates when control is regained or, in the absence of persons who are able to regain control, when all persons and property are at rest”.

If thorough investigation fails to establish whether an accident scene is the result of one or more unstabilized situations, then it should be treated as a single unstabilized situation.

Examples:

1. If intentional acts cause injury or damage beyond that reasonably to be expected from the acts, the unexpected injury or damage is not the result of deliberate intent. There is therefore, an unstabilized situation unless the contrary can be clearly established.
2. In a motor vehicle crash live electric wires fall on a motor vehicle, but there is no injury from the electric current while the occupants remain in the motor vehicle. The unstabilized situation ends with the occupants in a temporary position of safety. Any subsequent injury resulting from attempts by the occupants to leave the motor vehicle, or attempts by others to rescue the occupants, is a part of a new unstabilized situation.
3. In a motor vehicle crash the occupants of the motor vehicle are carried or thrown into water, but there is no injury from the submersion and the occupants reach a temporary position of safety. At this point the unstabilized situation has ended. Any subsequent injury from attempts by the occupants to reach shore, or from attempts by others to rescue the occupants is part of a new unstabilized situation.
4. In a motor vehicle crash objects are loosened by remain in place until all persons are removed from danger from objects that might fall or roll. No property damage would result if the objects fell or rolled. This ends the unstabilized situation. Any subsequent injury attributable to the fall or roll of the loosened objects is not part of the original unstabilized situation.
5. In a motor vehicle crash the motor vehicle catches on fire and is burning, but all occupants have been rescued and the fire is under control. No additional property damage is expected. This is the end of the unstabilized situation. If the heat of the fire ignites nearby combustible materials, any subsequent injury or damage from the induced ignition is not a part of the original unstabilized situation.
6. In a motor vehicle crash an involved motor vehicle carrying explosive materials is stopped and occupants and bystanders are removed from the scene. At this point the unstabilized situation is ended. If the explosive materials detonate during later attempts to remove or salvage them, any injury or damage resulting from the explosion is not a part of the original unstabilized situation.
7. A pedestrian is struck by a motor vehicle in transport which leaves the scene. The pedestrian comes to rest in the roadway. Any subsequent injury resulting from contact with another motor vehicle in transport is part of a new unstabilized situation.

UNSTABILIZED SITUATION

(continued)

8. A pedestrian is struck by a motor vehicle and thrown into the path of another motor vehicle and the pedestrian is struck a second time before coming to rest. There is only one unstabilized situation.
9. A motor vehicle in transport brakes, attempting to avoid a pedestrian crossing the roadway. The motor vehicle in transport strikes the pedestrian. At the same time (i.e., when the first vehicle started to brake and before it came to rest), a second motor vehicle in transport swerved to avoid a collision with the braking vehicle, striking a utility pole. The two motor vehicles in transport do not strike each other, but these events are all within one unstabilized situation.

This page intentionally left Blank

VALIDATION RULES

Notes on validation messages:

Standard messages are frequently used, with substitutions made as needed to display the applicable programmed screen field names (in the case of missing data), database table and column names (in the case of database lookups that don't find a match), and specific field values. When a message includes a screen field name such as "SerialNumber", "CrashDay", "CrashYear", etc., the programmed screen field name is what is being displayed. These are not spelling errors. Field names cannot contain spaces.

When a message shown in this document includes a value such as '99', the actual input value is substituted in the message in place of the '99' to give the user as much information as possible on the exact error condition encountered.

Rule Sequence

Rules are presented in the same general order as the fields are entered on the screen. However, error / warning messages do not display until the crash is validated.

Crash Data Area

Rule #	Beg. Year	Rule Invoked When:	Rule	Message Displayed when Rule Violated*	Field(s) Highlighted when Rule Violated
001	1985	Serial Number is null	Field required	Required field SerialNumber missing	Serial Number
098	1985	Serial Number is not null	Value entered must be numeric	When entered, SerialNumber must be numeric	Serial Number
2001	1985	Serial Number is not null AND County ID is not null AND Crash Year is not null AND you are working in a Preliminary Crash table (on either the primary or the local database)	Combination of Serial Number / County / Year must not be the same as the values in another crash in the Preliminary Crash table on whichever database you are currently using (Primary or Local).	A crash already exists with this serial number, county and year value	Serial Number Crash Year County ID
2002	1985	Serial Number is not null AND County ID is not null AND Crash Year is not null AND you are working in the primary database	Combination of Serial Number / County / Year must not be the same as the values in another Crash in the Reportable Crash table in the Primary database.	A crash already exists with this serial number, county and year value	Serial Number Crash Year County ID
004	1985	Crash Month is null	Field required	Required field CrashMonth missing	Crash Month

Rule #	Beg. Year	Rule Invoked When:	Rule	Message Displayed when Rule Violated*	Field(s) Highlighted when Rule Violated
006	1985	Crash Month is not null	Value must be in list: 01-12	Crash month must be a valid month number (01-12)	Crash Month
003	1985	Crash Day is null	Field required	Required field CrashDay missing	Crash Day
005	1985	Crash Year is null	Field required	Required field CrashYear missing	Crash Year
008	1985	Crash Year is not null	Value must be >= 1985	Year value must be at least 1985	Crash Year
007	1985	Crash Month is not null AND Crash Day is not null AND Crash Year is not null	Combination of three fields must be a valid date	Combination of month, day and year do not represent a valid date	Crash Month Crash Day Crash Year
009	1985	Crash Month is not null AND Crash Day is not null AND Crash Year is not null	Combination of three fields must be a date that is <= current date	Future date value invalid	Crash Month Crash Day Crash Year
082	1985	Road Character Code <> '9' AND Crash Hour is not null AND Light Condition Code is not null AND Crash Month is not null	Combination of Crash Hour, Light Condition and Crash Month must be in the Crash Hour - Light Condition cross-reference table where the entry is valid as of the crash date	Combination of Crash Hour, Light Condition and Crash Month not found on the cross-reference table	Crash Month Crash Hour Light Condition
083	1985	Road Character Code <> '9' AND Crash Hour is not null AND Light Condition Code is not null AND Crash Month is not null	Combination of Crash Hour, Light Condition and Crash Month must be in the Crash Hour - Light Condition cross-reference table where the entry is valid as of the crash date and the Validity Indicator on the entry is "W".	Warning - please review combination of Crash Hour, Light Condition and Crash Month	Crash Month Crash Hour Light Condition
099	1985	Crash Hour is null	Field required	Required field CrashHourNo missing	Crash Hour
100	1985	Crash Hour is not null	Value entered must be on Crash Hour lookup table where the entry is valid as of the crash date.	CRASH_HR_NO = '99' was not found in CRASH_HR or is not valid as of the crash date	Crash Hour
010	1985	County ID is null	Field required	Required field CountyId missing	County
011	1985	County ID is not null	Value entered must be on County lookup table, where the entry is valid as of the crash date.	CNTY_ID = '99' was not found in CNTY or is not valid as of the crash date	County

Rule #	Beg. Year	Rule Invoked When:	Rule	Message Displayed when Rule Violated*	Field(s) Highlighted when Rule Violated
024	2003	Crash Year is not null AND Highway Number is not null AND Roadway Number is not null AND Mileage Type is not null AND Milepoint Number is not null AND County ID is not null	County value entered must match County value on HWY_SEG_HIST table for this highway segment for the Crash Year	County value entered doesn't match County value for this highway / milepoint for this year in ITIS	County
012	1985	City Section ID is not null	Value entered must be in City lookup table, where the entry is valid as of the crash date.	CITY_SECT_ID = '999' was not found in CITY_SECT or is not valid as of the crash date	City
101	2003	Crash Year is not null AND Highway Number is not null AND Roadway Number is not null AND Mileage Type is not null AND Milepoint Number is not null	City value entered must match City value on HWY_SEG_HIST table for this highway segment for the crash year	City value entered doesn't match City value for this highway / milepoint for this year in ITIS	City Section
013	1985	City Section ID is not null AND County ID is not null	Combination of City Section ID and County ID must exist on City-County Xref table, where the entry is valid as of the crash date.	Combination of CITY_SECT_ID = '999' and CNTY_ID = '99' not valid in the CITY_SECT__CNTY cross-reference table	City County
014	1985	Urban Area Code is not null	Value must be in Urban Area lookup table, where the entry is valid as of the crash date.	URB_AREA_CD = '99' was not found in URB_AREA or is not valid as of the crash date	Urban Area
017	2003	Crash Year is not null AND Highway Number is not null AND Roadway Number is not null AND Mileage Type is not null AND Milepoint Number is not null	Urban Area value entered must match Urban Area value on HWY_SEG_HIST table for this highway segment for the Crash Year	Urban area value entered doesn't match urban area value for this highway / milepoint for this year in ITIS	Urban Area
015	1985	Urban Area Code is not null AND County ID is not null	Combination of Urban Area Code and County ID must exist on Urban Area – County XREF table, where the entry is valid as of the crash date.	Combination of CNTY_ID = '99' and URB_AREA_CD = '99' not valid in URB_AREA__CNTY cross-reference table	Urban Area County

Rule #	Beg. Year	Rule Invoked When:	Rule	Message Displayed when Rule Violated*	Field(s) Highlighted when Rule Violated
016	1985	Urban Area Code is not null AND City Section ID is not null	Combination of Urban Area Code and City Section ID must exist on Urban Area – City Section XREF table, where the entry is valid as of the crash date.	Combination of CITY_SECT_ID = '999' and URB_AREA_CD = '99' not valid in the URB_AREA__CITY_SECT cross-reference table	Urban Area City
018	1997	Functional Class is null	Field Required	Required field FunctionalClassificationId missing	Functional Class
019	1985	Functional Class is not null	Value must be in Functional Class lookup table where the entry is valid as of the crash date	Functional Class not in lookup table or not valid as of crash date.	Functional Class
020	2003	Crash Year is not null AND Highway Number is not null AND Roadway Number is not null AND Mileage Type is not null AND Milepoint Number is not null AND Functional Class is not null	Functional Class value entered must match Functional Class value on HWY_SEG_HIST table for this highway segment for the Crash Year.	Functional Class value entered doesn't match functional class value for this highway / milepoint for this year in ITIS	Functional Class
095	1997	Functional Classification Code is < '10'	Urban Area Code must be null	Urban Area value indicates urban area but Functional Class value indicates rural area	Functional Class Urban Area
096	1997	Functional Classification Code is > '09' and Urban Area Code is null	Urban Area Code is required	Urban Area value indicates rural area but Functional Class value indicates urban area	Functional Class Urban Area
022	2003	Crash Year is not null AND Highway Number is not null AND Roadway Number is not null AND Mileage Type is not null AND Milepoint Number is not null	NHS value entered must match NHS value on HWY_SEG_HIST table for this highway segment for this year	NHS value entered doesn't match NHS value for this highway / milepoint for this year in ITIS	NHS Flag
115	1985	NHS Flag is not null	Value entered must be 0 or 1	NationalHwySystemFlag value must be 1 for Yes or 0 for No	NHS Flag
023	1985	Highway Number is not null	Highway Number value entered must be in the Highway History lookup table where the entry is valid as of the crash date	HWY_NO = '999' was not found in HWY_HIST or is not valid as of the crash date	Highway Number

Rule #	Beg. Year	Rule Invoked When:	Rule	Message Displayed when Rule Violated*	Field(s) Highlighted when Rule Violated
025	1985	Roadway Number is not null	Roadway Number value entered must be in the Roadway lookup table where the entry is valid as of the crash date.	RDWY_NO = '9' was not found in RDWY_NO or is not valid as of the crash date	Roadway Number
026	1985	Highway Number is null	Roadway Number must be null.	Roadway Number must be null when the Highway Number is null	Roadway Number
102	1985	Highway Number is not null	Roadway Number is required	Roadway Number is required when Highway Number is entered	Roadway Number
027	1985	Highway Component Code is not null	Value entered must be in the Highway Component lookup table where the entry is valid as of the crash date.	HWY_COMPNT_CD = '9' was not found in HWY_COMPNT or is not valid as of the crash date	Highway Component
028	1985	Highway Number is null	Highway Component must be null.	Highway Component Code must be null when the Highway Number is null	Highway Component
033	1985	Road Connection Number is not null	Highway Component must equal '6'	Highway Component must be 6 if a Road Connection value is specified	Highway Component
103	1985	Highway Number is not null	Highway Component is required	Highway Component is required when Highway Number is entered	Highway Component
029	1985	Mileage Type Code is not null	Value entered must be in the Mileage Type lookup table where the entry is valid as of the crash date.	MLGE_TYP_CD = '9' was not found in MLGE_TYP or is not valid as of the crash date	Mileage Type
030	1985	Highway Number is null	Mileage Type Code must be null.	Mileage Type Code must be null when the Highway Number is null	Mileage Type
031	2003	Crash Year is not null AND Highway Number is not null AND Roadway Number is not null AND Mileage Type is not null AND Milepoint Number is not null	Mileage Type value entered must match Mileage Type value on HWY_SEG_HIST table for this highway segment for the Crash Year.	Mileage Type value entered doesn't match Mileage Type value for this highway / milepoint for this year in ITIS	Mileage Type
104	1985	Highway Number is not null	Mileage Type Code is required	Mileage Type Code is required when Highway Number is entered	Mileage Type
032	1985	Road Connection Number is not null	Value must be numeric	When entered, RoadConnectionNumber must be numeric	Connection Number

Rule #	Beg. Year	Rule Invoked When:	Rule	Message Displayed when Rule Violated*	Field(s) Highlighted when Rule Violated
105	1985	Latitude Degrees is not null	Value entered must be between 41 and 47 inclusive.	When entered, Latitude Degrees must be a whole number between 41 and 47, inclusive	Latitude Degrees
106	1985	Latitude Minutes is not null	Value entered must be between 0 and 60 inclusive.	When entered, Latitude Minutes must be a whole number between 0 and 60, inclusive	Latitude Minutes
125	1985	Latitude Degrees is null	Latitude Minutes must be null	Latitude Minutes must be null when Latitude Degrees is null	Latitude Minutes
107	1985	Latitude Seconds is not null	Value entered must be between 0.00 and 60.00 inclusive.	When entered, Latitude Seconds must be a numeric value between 0.00 and 60.00, inclusive	Latitude Seconds
126	1985	Latitude Degrees is null	Latitude Seconds must be null	Latitude Seconds must be null when Latitude Degrees is null	Latitude Seconds
108	1985	Longitude Degrees is not null	Value entered must be between -123 and -117 inclusive. (Note: positive values entered are automatically converted to negative before value is stored.)	When entered, Longitude Degrees must be a whole number between 123 and 117 inclusive, or between -123 and -117 inclusive	Longitude Degrees
109	1985	Longitude Minutes is not null	Value entered must be between 0 and 60 inclusive.	When entered, Longitude Minutes must be a whole number between 0 and 60, inclusive	Longitude Minutes
127	1985	Longitude Degrees is null	Longitude Minutes must be null	Longitude Minutes must be null when Longitude Degrees is null	Longitude Minutes
110	1985	Longitude Seconds is not null	Value entered must be between 0.00 and 60.00 inclusive.	When entered, Longitude Seconds must be a numeric value between 0.00 and 60.00, inclusive	Longitude Seconds
128	1985	Longitude Degrees is null	Longitude Seconds must be null	Longitude Seconds must be null when Longitude Degrees is null	Longitude Seconds
034	1985	Special Jurisdiction ID is not null	Value entered must be in the Special Jurisdiction lookup table where the entry is valid as of the crash date	SPECL_JRSDCT_ID = '99' was not found in SPECL_JRSDCT or is not valid as of the crash date	Special Jurisdiction

Rule #	Beg. Year	Rule Invoked When:	Rule	Message Displayed when Rule Violated*	Field(s) Highlighted when Rule Violated
137	1985	County is not blank and Special Jurisdiction is not blank	The combination of County ID and Special Jurisdiction ID must be in the cross-reference table	Combination of CNTY_ID = '99' and SPECL_JRSDCT_ID = '99' not valid in the SPECL_JRSDCT_CNTY cross-reference table	Special Jurisdiction County
036	2002	(County <> 26 or City < 241) AND Road Character = 1 AND Highway Component <> 6 AND Street <> "" AND Intersecting Street <> "" AND Intersecting Street <> '00000' AND Street <= '99999' AND Intersecting Street <= '99999'	Street # must be <= Intersecting St #	First street number must be less than the intersecting street number	Street Number Intersecting Street
136	1985	Highway is blank and Street is blank and Recreational Road is blank	Street or Highway or Recreational Road must be present	Either a Highway, Street or Recreational Road must be specified	Street Number
039	1985	Road Character = '1' AND Milepoint Number is null	Distance from Intersection must be zero.	Distance from Intersection must = 0 when Road Character = 1	Distance from Intersection
040	1985	Compass Direction Code is null	Value required	Required field CompassDirectionCode missing	Direction from Intersection
041	1985	Compass Direction Code is not null	Value entered must be in Compass Direction lookup table where the entry is valid as of the crash date.	CMPSS_DIR_CD was not found in CMPSS_DRCT or is not valid as of the crash date	Direction from Intersection
042	1985	Road Character = '1' AND Impact Location Code <= '04'	Direction from Intersection must = 9.	When Road Character = "1" and Impact Location Code <=04 then Direction from Intersection must = 9	Direction from Intersection
043	1985	Highway Number is null AND City Section ID is not null AND Impact Location Code > '04'	Direction from Intersection must be < 9.	When Impact Location Code > 04 and Highway No. is null and City ID is not null, then Direction from Intersection must be < 9	Direction from Intersection
044	1985	Milepoint Number is not null	Milepoint Number must be numeric.	When entered, MilepointNumber must be numeric	Milepoint
131	1985	Milepoint Number is not null	Milepoint Number must be <= 999.99	When entered, the milepoint value must be <= 999.99	Milepoint

Rule #	Beg. Year	Rule Invoked When:	Rule	Message Displayed when Rule Violated*	Field(s) Highlighted when Rule Violated
133	1985	Highway Number is not null	Milepoint Number must be present	Milepoint is required when Highway Number is entered	Milepoint
130	2003	Crash Year is not null AND Highway Number is not null AND Milepoint Number is not null	Milepoint value entered must exist on HWY_SEG_HIST table for this highway for the Crash Year	Milepoint value not valid for the specified Highway in the specified Crash Year according to ITIS	Milepoint
045	1985	Posted Speed Limit Value is not null	Value must be < 70	When entered, Posted Speed Limit value must be < 70	Posted Speed Limit
046	1985	Road Character Code is null	Field Required	Required field RoadCharacterCode missing	Road Character
047	1985	Road Character Code is not null	Value entered must be in Road Character lookup table where the entry is valid as of the crash date.	RD_CHAR_CD = '9' was not found in RD_CHAR or is not valid as of the crash date	Road Character
049	1985	Off Roadway Flag is not null	Value entered must be 0 or 1.	OffRoadwayFlag value must be 1 for Yes or 0 for No	Off Road Flag
113	1985	Off Roadway Flag is null	Field Required	Required field OffRoadwayFlag missing	Off Road Flag

676	1985	Vehicle Type Code = '13'	Participant Safety Equipment Use Code must be in ('0','5','6','8','9')	When Vehicle Type is 13, Partic. Safety Equip Type is generally null, 0, 5, 6, 8 or 9. Confirm value.	Safety Equipment Type
677	1985	Vehicle Type Code = '14'	Participant Safety Equipment Use Code must be in ('0','5','6','8','9')	When Vehicle Type is 14, Partic. Safety Equip Type is generally null, 0, 5, 6, 8 or 9. Confirm value.	Safety Equipment Type
678	1985	Vehicle Type Code = '15'	Participant Safety Equipment Use Code must be in ('0','5','6','8','9')	When Vehicle Type is 15, Partic. Safety Equip Type is generally null, 0, 5, 6, 8 or 9. Confirm value.	Safety Equipment Type
659	1985	Participant Type Code is (0, 1, 2, or 8) and Airbag Deployed Indicator is not null	Value entered must be 0, 1 or 9.	AirbagDeployIndicator must be blank, 0 (No), 1 (Yes), or 9 (Unknown)	Airbag Deployed Indicator
660	1985	Participant Type Code is not (0, 1, 2, or 8) and Airbag Deployed Indicator is not null	Airbag Deployed Indicator must be null	When Participant is a Pedestrian or Pedalcyclist, the Airbag Deployed Indicator must be null	Airbag Deployed Indicator
634	1985	Participant Type Code = (3 or 4 or 5) and Participant Movement Code is not null	Participant Movement Code value entered must = 0 or 1	Participant Movement Code must be 0 or 1 when Participant is a pedestrian	Participant Movement
635	1985	Participant Type Code = (6 or 7 or 9) and Participant Movement Code is not null	Participant Movement Code value entered must be on the Movement lookup table and the entry must be valid as of the Crash Date	MVMNT_CD = '9' was not found in MVMNT or is not valid as of the crash date	Participant Movement
654	1985	Participant Type Code is (3, 4, 5, 6, 7 or 9) AND Participant Movement Code is null	Participant Movement code is required	Participant Movement Code is required when Participant is a pedestrian, pedalcyclist, or unknown non-motorist	Participant Movement
636	1985	Participant Type Code is not (3, 4, 5, 6, 7 or 9) AND Participant Movement Code is not null	Participant Movement Code must be null	Participant Movement Code must be null when participant is a vehicle occupant	Participant Movement
656	1985	Participant Type Code is (3, 4, 5, 6, 7 or 9) AND Participant Compass Direction From Code is null	Participant Compass Direction From Code is required	A valid Participant Direction From value is required when Participant is not a vehicle occupant	Participant Compass Direction From

Rule #	Beg. Year	Rule Invoked When:	Rule	Message Displayed when Rule Violated	Field(s) Highlighted when Rule Violated
637	1985	Participant Type Code is (3, 4, 5, 6, 7 or 9) AND Participant Compass Direction From Code is not null	Participant Compass Direction From Code must be in Compass Direction lookup table and the entry must be valid as of the Crash date.	A valid Participant Direction From value is required when Participant is not a vehicle occupant	Participant Compass Direction From
639	1985	Participant Type Code is not (3, 4, 5, 6, 7 or 9) and Participant Compass Direction From Code is not null	Participant Compass Direction From Code must be null	Participant Direction From value must be null when Participant is a vehicle occupant	Participant Compass Direction From
657	1985	Participant Type Code is (3, 4, 5, 6, 7 or 9) AND Participant Compass Direction To Code is null	Participant Compass Direction To Code is required	A valid Participant Direction To value is required when Participant is not a vehicle occupant	Participant Compass Direction To
638	1985	Participant Type Code is (3, 4, 5, 6, 7 or 9) AND Participant Compass Direction To Code is not null	Participant Compass Direction To Code must be in Compass Direction lookup table and the entry must be valid as of the Crash date.	A valid Participant Direction To value is required when Participant is not a vehicle occupant	Participant Compass Direction To
640	1985	Participant Type Code is not (3, 4, 5, 6, 7 or 9) and Participant Compass Direction To Code is not null	Participant Compass Direction To Code must be null	Participant Direction To value must be null when Participant is a vehicle occupant	Participant Compass Direction To
662	1985	Participant Movement Code is not blank and is between 0 and 5, AND Compass Direction From Code is not blank and is not 0 AND Compass Direction To Code is not blank and is not 0 AND Participant Type Code is in (3,4,5,6,7,9)	Combination of Movement Code, Direction From Code and Direction to Code must be valid per formula below.	Discrepancy exists between Movement and From or To Direction	Participant Movement Code, Participant Compass Direction From Code, Participant Compass Direction To Code

Rule #	Beg. Year	Rule Invoked When:	Rule	Message Displayed when Rule Violated	Field(s) Highlighted when Rule Violated
641	1985	Participant Type Code is (3 or 4 or 5) AND Pedestrian Location Code is not null	Pedestrian Location value entered must be in Pedestrian Location lookup table and the entry must be valid as of the crash date	When the Participant is a pedestrian, a valid Pedestrian Location value must be entered	Pedestrian Location
658	1985	Participant Type Code is (3 or 4 or 5) AND Pedestrian Location Code is null	Pedestrian Location Code is required	When the Participant is a pedestrian, a valid Pedestrian Location value must be entered	Pedestrian Location
642	1985	Pedestrian Type Code is not (3 or 4 or 5) AND Pedestrian Location Code is not null	Pedestrian Location Code must be null	When the Participant is not a pedestrian, the Pedestrian Location value must be null	Pedestrian Location
643	2002	Participant Type Code is (3, 4, 5, 6, 7 or 9) and Participant Action Code is null	Participant Action Code is required	When Participant is not a vehicle occupant, a Participant Action code is required	Participant Action
644	1985	Participant Action Code is not null	Value entered must be on the Action lookup table and the entry must be valid as of the crash date and the value must be valid for use at the Participant level	ACTN_CD = '99' was not found in ACTN or is not valid for use as of the crash date, or is not valid for use at this level	Participant Action
645	1985	Participant Type Code = (3, 4, 5, 6, 7 or 9) AND no Error Codes were entered at the Crash level	At least one Participant Error Code must be entered	When Participant is not a vehicle occupant, a Participant Error Code is required if no Crash-level error has been specified	Participant Error (1)
646	1985	At least one Error code was entered for this Participant	For each Participant Error Code: The Error Code must be on the Error lookup table, must be valid on the crash date and must be valid for use at the Participant level.	CRASH_ERR_CD = '99' was not found in ERR or is not valid for use as of the crash date, or is not valid for use at this level	Participant Error (1) Participant Error (2) Participant Error (3)
647	1985	At least one Cause code was entered for this Participant	For each Participant Cause Code: The Cause Code must be on the Cause lookup table, must be valid on the crash date and must be valid for use at the Participant level.	CAUSE_CD = '99' was not found in CAUSE or is not valid for use as of the crash date, or is not valid for use at this level	Participant Cause (1) Participant Cause (2) Participant Cause (3)

Rule #	Beg. Year	Rule Invoked When:	Rule	Message Displayed when Rule Violated	Field(s) Highlighted when Rule Violated
648	1985	At least one Event code was entered for this Participant	For each Participant Event Code: The Event Code must be on the Event lookup table, must be valid on the crash date and must be valid for use at the Participant level.	EVNT_CD = '999' was not found in EVNT or is not valid for use as of the crash date, or is not valid for use at this level	Participant Event (1) Participant Event (2) Participant Event (3)
649	1985	Crash Type Code = '3'	None of the Participant Event Codes can be 05 (sub-ped)	If Crash Type Code = 3 (Pedestrian) then none of the Participant Event Codes can be 05 (sub-ped)	Crash Type [Participant Event]
650	1985	BAC Value is not null	Value entered must be between 00-79, or be 80, 84, 85, 86 or 87	When entered, BAC Value must be between 00-79, or be 80, 84, 85, 86 or 87	BAC Value
651	1985	Alcohol Use Reported Indicator is not null	Value entered must be 0, 1 or 9	Alcohol Use Reported Indicator must be blank, 0, 1, or 9	Alcohol Use Reported Indicator
652	1985	Drug Use Reported Indicator is not null	Value entered must be 0, 1 or 9	Drug Use Reported Indicator must be blank, 0, 1, or 9	Drug Use Reported Indicator

Vehicle and Participant Movement / Compass Direction Formula (per rules 316 and 662):

When Movement Code = '1'

- If cmpss_dir_from_cd = '1' then cmpss_dir_to_cd must = '5'
- If cmpss_dir_from_cd = '2' then cmpss_dir_to_cd must = '6'
- If cmpss_dir_from_cd = '3' then cmpss_dir_to_cd must = '7'
- If cmpss_dir_from_cd = '4' then cmpss_dir_to_cd must = '8'
- If cmpss_dir_from_cd = '5' then cmpss_dir_to_cd must = '1'
- If cmpss_dir_from_cd = '6' then cmpss_dir_to_cd must = '2'
- If cmpss_dir_from_cd = '7' then cmpss_dir_to_cd must = '3'
- If cmpss_dir_from_cd = '8' then cmpss_dir_to_cd must = '4'

When Movement Code = '2'

- If cmpss_dir_from_cd = '1' then cmpss_dir_to_cd must be in ('6','7','8')
- If cmpss_dir_from_cd = '2' then cmpss_dir_to_cd must be in ('7','8','1')
- If cmpss_dir_from_cd = '3' then cmpss_dir_to_cd must be in ('8','1','2')
- If cmpss_dir_from_cd = '4' then cmpss_dir_to_cd must be in ('1','2','3')
- If cmpss_dir_from_cd = '5' then cmpss_dir_to_cd must be in ('2','3','4')
- If cmpss_dir_from_cd = '6' then cmpss_dir_to_cd must be in ('3','4','5')
- If cmpss_dir_from_cd = '7' then cmpss_dir_to_cd must be in ('4','5','6')
- If cmpss_dir_from_cd = '8' then cmpss_dir_to_cd must be in ('5','6','7')

When Movement Code = '3'

- If cmpss_dir_from_cd = '1' then cmpss_dir_to_cd must be in ('2','3','4')
- If cmpss_dir_from_cd = '2' then cmpss_dir_to_cd must be in ('3','4','5')
- If cmpss_dir_from_cd = '3' then cmpss_dir_to_cd must be in ('4','5','6')
- If cmpss_dir_from_cd = '4' then cmpss_dir_to_cd must be in ('5','6','7')
- If cmpss_dir_from_cd = '5' then cmpss_dir_to_cd must be in ('6','7','8')
- If cmpss_dir_from_cd = '6' then cmpss_dir_to_cd must be in ('7','8','1')
- If cmpss_dir_from_cd = '7' then cmpss_dir_to_cd must be in ('8','1','2')
- If cmpss_dir_from_cd = '8' then cmpss_dir_to_cd must be in ('1','2','3')

When Movement Code = '4'

and cmpss_dir_from_cd <> cmpss_dir_to_cd))
